- |        |   |
|--------|---|
| No. 55 | Report of the Ontario Workmen's Compensation Board for the year 1917. Presented to the Legislature, March 21st, 1918. <i>Printed.</i>   |
| No. 56 | Report of Commissioner Coatsworth <i>re</i> Industrial Farm investigation at Burwash, Ontario. Presented to the Legislature, February 6th, 1918. <i>Not printed.</i>  |
| No. 57 | Report and supporting statements on Medical Education in Ontario, by Mr. Justice Hodgins, Commissioner. Presented to the Legislature, February 6th, 1918. <i>Printed.</i>   |
| No. 58 | Return to an Address to His Honour the Lieutenant-Governor, of the 20th March, 1917, praying that he will cause to be laid before the House—1. Copies of all Orders-in-Council approving of the agreement for the construction of the Hydro Radial Line from Toronto to Niagara Falls through Hamilton. 2. Copies of all reports, engineers' and otherwise, in reference to the cost and prospective earnings of the said railway furnished by the Hydro-Electric Power Commission to the Government. 3. Copies of all correspondence passing between the Hydro-Electric Power Commission and the Government in reference to the passing of the said Orders-in-Council and the construction of the said line. Mr. Marshall. Presented to the Legislature, February 6th, 1918. <i>Not printed.</i> |
| No. 59 | Return to an Order of the House of the 26th March, 1917, for a Return shewing:—1. How many leases of water-powers were issued by the Ontario Government in each of the years 1912, 1913, 1914, 1915, 1916 and down to March 1st, 1917. 2. To whom, in what districts, and for what periods of time were such leases of water-powers issued. Mr. Dewart. Presented to the Legislature, February 6th, 1918. <i>Not printed.</i>   |
| No. 60 | Return to an Order of the House of the 7th March, 1917, for a Return shewing:—1. What areas of land of the Government of the Province of Ontario in Forest Reserve sections were overrun by fire in the years 1910, 1911, 1912, 1913, 1914, 1915 and 1916 respectively. Mr. Ducharme. Presented to the Legislature, February 6th, 1918. <i>Not printed.</i>   |
| No. 61 | Return to an Order of the House of the 7th March, 1917, for a Return shewing:—1. How many patents of lands have been issued, under the Mines Act, in the District of Sudbury, to corporations, since February 8, 1905, in addition to the six patents of land issued to the Canada Copper Company on the 13th day of December, 1916. 2. To what corporations were such patents issued; on what dates; and in what townships were the lands situated. 3. Were the regulations with regard to timber preservation taken advantage of by those who staked claims, and were they so relieved from doing the necessary   |

development work required by the Mining Law of Ontario. If so, in what cases. Mr. *Dewart*. Presented to the Legislature, February 6th, 1918. *Not printed*.

- No. 62 Return to an Order of the House of the 23rd February, 1917, for a Return of Copies—1. All correspondence passing between the Government of Ontario, or any member, officer, or official thereof, and the Ontario Hydro-Electric Power Commission or any officer or official thereof, in reference to the purchase or acquirement of the properties of the Seymour Power Company. 2. All reports made by the Hydro-Electric Power Commission, or any member, officer or official thereof, in reference to the purchase of the properties of the said Seymour Power Company. 3. All valuations made by or on behalf of the Hydro-Electric Power Commission of the properties of the said Seymour Power Company. 4. All correspondence between the Government of the Province of Ontario, or any member, officer, or official thereof, and the Government of the Dominion of Canada, or any officer, or official thereof, in reference to the purchase or acquirement of the properties of the Seymour Power Company. Mr. *Carter*. Presented to the Legislature, February 6th, 1918. *Not printed*.
- No. 63 Return to an Order of the House of the 16th March, 1917, for a Return shewing:—1. What was the population of Ontario for each of the years from the year 1900 to 1916 inclusive. 2. What was the public debt of the Province of Ontario from the year 1900 to the year 1916 inclusive. 3. What was the public debt *per capita* for each of the years from the year 1900 to the year 1916 inclusive. Mr. *Pinard*. Presented to the Legislature, February 6th, 1918. *Not printed*.
- No. 64 Return to an Order of the House of the 14th March, 1917, for a Return of copies of all documents and correspondence passing between the Workmen's Compensation Board or any member, officer or employee thereof; the personal representatives of Archibald Taylor (deceased), late of Sarnia, Ont., or any person or persons acting on their behalf, and the Grand Trunk Railway Company or any employee or officer thereof. Mr. *Elliott*. Presented to the Legislature, February 6th, 1918. *Not printed*.
- No. 65 Return to an Order of the House of the 5th March, 1917, for a Return of—1. Copies of all correspondence, reports and documents in any way relating to the attempted arrest of one John W. Moyes. 2. What steps have been taken to effect such arrest and if it is the intention of the Government to continue its efforts to bring about the arrest of the said John W. Moyes. Mr. *Proudfoot*. Presented to the Legislature, February 6th, 1918. *Not printed*.

- |        |   |
|--------|---|
| No. 66 | Copies of Regulations and Orders-in-Council as required by Section 27 of the Department of Education Act. Presented to the Legislature, February 13th, 1918. <i>Not printed.</i>  |
| No. 67 | Statement <i>re</i> distribution of Revised and Sessional Statutes for the year 1917. Presented to the Legislature, February 20th, 1918. <i>Not printed.</i>  |
| No. 68 | Copies of Orders-in-Council in accordance with the provisions of ss. 6 of section 78 of the Surrogate Courts Act. Presented to the Legislature, February 26th and March 21st, 1918. <i>Not printed.</i>   |
| No. 69 | Return to an Order of the House, of the 25th February, 1918, for a Return shewing—1. What lands, if any, have been patented in the District of Sudbury, in the year 1917, to the following persons, respectively, Albert Harvey, Rinaldo McConnell, Alex. H. Beath and R. J. Tough. 2. On what dates were the said lands, if any, patented. 3. Have any terms been imposed in the Patents granted for any such lands so as to insure the treatment and refining of the Nickel Ores mined upon these properties in the Province of Ontario. 4. Is there any agreement or obligation on the part of the Company in question to which any such lands have been granted, which obligates them to carry on mining or other obligations, in the Province of Ontario, and if so what are the agreements or obligations and within what time limit must they be performed. Mr. Dewart. Presented to the Legislature, February 26th, 1918. <i>Not printed.</i>   |
| No. 70 | Contract of Agreement made with the Mounce Cartage Company, Limited, relating to the delivery of mail matter to and from the Toronto Post Office and the Parliament Buildings. Presented to the Legislature, February 27th, 1918. <i>Not printed.</i>   |
| No. 71 | Return to an Order of the House of the 26th February, 1918, for a Return shewing—1. What lands in the District of Sudbury, if any, have been granted to "John E. Hodge," of Minneapolis, Minn., in the U.S.A., since the 1st of March, 1917. 2. Is the said "John E. Hodge" connected with or representing any corporate interests, to the knowledge of the Government, and if so, what is the name of the corporation, and who are its officers. 3. Have any terms been imposed in such patents as have been granted, so as to ensure the treatment and the refining of the nickel ores mined upon this property in the Province of Ontario. 4. Is there any agreement, or obligation on the part of the grantees in question, obligating them to carry on mining or other operations in the Province of Ontario, and if so what are the agreements and obligations, and within what time limit must they be performed. Mr. Dewart. Presented to the Legislature, March 1st, 1918. <i>Not printed.</i> |

- No. 72      Return to an Order of the House of the 26th February, 1918, for a Return shewing—1. What lands, if any, have been patented in the District of Sudbury to “Sudbury Nickel, Limited,” in the year 1917, and on what dates. 2. When was this company incorporated, with what share capital, and with what provisional directors. 3. What stock of the company has been issued (a) for cash; (b) for transfer of properties or claims, and to whom. 4. Who are the present directors of the company. 5. Have any terms been imposed in the patents granted for any such lands, so as to ensure the treatment and refining of the nickel ores mined upon any such properties in the Province of Ontario. 6. Is there any agreement or obligation on the part of the company in question to whom any such lands have been granted, which obligates them to carry on mining or other operations in the Province of Ontario, and if so what are the agreements or obligations, and within what time limit must they be performed. Mr. *Dewart*. Presented to the Legislature, March 1st, 1918. *Not printed*.
- No. 73      Return to an Order of the House of the 26th February, 1918, for a Return shewing—1. What lands, if any, have been patented to the Canadian Copper Company in 1917, and at what dates. 2. Has the Government attached any restrictions to the patents granted to the said company, or taken any steps to ensure that the nickel recovered from the properties so granted shall be refined or otherwise treated in the Province of Ontario. Mr. *Dewart*. Presented to the Legislature, March 1st, 1918. *Not printed*.
- No. 74      Interim Report on Venereal Diseases, with copy of an Act for the Prevention of Venereal Disease, by Mr. Justice Hodgins, Commissioner. Presented to the Legislature, March 5th, 1918. *Printed*.
- No. 75      Return to an Order of the House of the 7th March, 1918, for a Return shewing—1. Copies of all correspondence between the Minister of Public Works, or any other members of the Government, or any official thereof, and any person or persons, and copies of any reports received by the Government, relating to the floods on the Grand River, since the return brought down by the House on the 3rd of April, 1913, being a preliminary study of the subject by H. G. Acres of the Hydro-Electric Power Commission. Mr. *Ham*. Presented to the Legislature, March 8th, 1918. *Not printed*.
- No. 76      Return to an Order of the House of 25th February, 1918, for a Return shewing—1. What was the amount paid in by each of the following corporations in the year 1917, or the last period of twelve months for which returns are made, for all purposes under the Workmen’s Compensation Act, namely: Massey-

- Harris Co., Ltd., John Inglis Co., Ltd., Toronto Carpet Mfg Co., Harris Abattoir Co., Ltd., Park, Blackwell Co., Ltd., Dominion Radiator Co., Ltd. 2 What amount was paid out in the same period under the Act to the employees of each of the said companies, for claims made for injuries during the said period. 3. What amount, if any, was held, under the Act, for further payments on claims made in the same period for injuries by such employees of each of the said companies. Mr. *Dewart*. Presented to the Legislature, March 11th, 1918. *Not printed*.
- No. 77 Return to an Order of the House of the 27th February, 1918, for a Return shewing—1. Copies of all correspondence between the Government, or any officer or official thereof, and any person or persons, in reference to the purchase of additional land and the erection of buildings thereon, and all items in connection therewith, referred to in Vote No. 156, relating to the Hospital for the Insane, Kingston, appearing on Page 35 of the Supplementary Estimates for the Fiscal Year ending October 31st, 1918. Mr. *Dewart*. Presented to the Legislature, March 11th, 1918. *Not printed*.
- No. 78 Memorandum on the Natural Gas Situation in Kent, Essex and Lambton. Presented to the Legislature, March 15th, 1918. *Printed*.
- No. 79 Report on the Ontario Parole Board for the year 1916-17. Presented to the Legislature, March 20th, 1918. *Printed*.
- No. 80 Budget Speech of the Provincial Treasurer, delivered in the House on the 12th February, 1918. *Not presented. Printed*.
- No. 81 Telephone Systems—Statistical information and Acts relating to. *Not presented. Printed*.
- No. 82 Report of Bureau of Municipal Affairs for the year 1917. Presented to the Legislature, March 21st, 1918. *Not printed*.
- No. 83 Order-in-Council of 21st March, 1918, designating the Hospitals, Refuges, Orphanages and Infants' Homes, to which aid may be granted under the Hospitals and Charitable Institutions Act. Presented to the Legislature, March 21st, 1918. *Not printed*.
- No. 84 Return to an Order of the House of the 7th March, 1917, for a Return shewing—1. What was the number and kind of pelts or skins of fur-bearing animals coming into the possession of the Government of the Province of Ontario during the years 1910, 1911, 1912, 1913, 1914, 1915, and 1916, respectively, because of violation of any law or laws relating to fur-bearing animals. 2. What disposition of such pelts or skins has been made by the Government. 3. And what price or prices for

- each kind of fur, and to whom have the aforesaid pelts or skins been disposed of by the Government. Mr. *Ferguson* (Kent). Presented to the Legislature, March 21st, 1918. *Not printed.*
- No. 85 Report of the Soldiers' Aid Commission of Ontario for the year 1917. Presented to the Legislature, March 21st, 1918. *Not printed.*
- No. 86 Return to an Order of the House of the 6th March, 1918, for a Return shewing—1. How many civil servants were released during the past year for work on Ontario farms. 2. What are the names of such employees. 3. How long were they so employed. 4. What are the names of the parties by whom they were employed. Mr. *Ham*. Presented to the Legislature, March 21st, 1918. *Not printed.*
- No. 87 Return to an Order of the House of the 20th March, 1918, for a Return shewing—1 (a) How many copies of the Report relating to the registration of births, marriages and deaths in the province for the year 1916, were published. (b) How many were distributed. 2. What was the cost of printing and publication. 3 (a) How much would the cost have been reduced if the Report had been confined to the first 57 pages. (b) How much, if confined to the first 154 pages. 4. How many officials and clerks were employed in the preparation of the copy of the said Report for the printer, and for what approximate time and at what estimated cost. Mr. *Dewart*. Presented to the Legislature, March 21st, 1918. *Not printed.*

Reaping Oats on farm of Mr. J. B. Philips, Milberta, Ontario, September, 1917.

SIXTEENTH ANNUAL REPORT

OF THE

## General Remarks.

Accounts and statistics for fiscal year ending October 31st, 1917, herewith:—

### MILEAGE IN OPERATION ON OCTOBER 31ST, 1917.

	Miles.	Miles.
Main Line—		
North Bay to Cochrane.....	252.29	252.29
Branch Lines—		
Charlton Branch.....	7.60	
Porcupine (includes Iroquois Falls Branch).....	40.11	
Elk Lake Branch.....	28.50	
		76.21
Nipissing Junction Spur (leased to Grand Trunk Ry.).....	.....	2.10
Yards and Sidings—		
Yards and Sidings—main line and branches.....	112.93	
Liskeard Spur.....	1.12	
		114.05
Double Track—North Cobalt to Haileybury.....	.....	1.70
Subsidiary Lines—		
Nipissing Central Railway.....	13.13	13.13
Total mileage .....		459.48

Following is a condensed statement of revenue account for fiscal year ended October 31st, 1917, compared with 1915 and 1916. The sub-divisions of the condensed statement for 1917 are shown in full detail in the financial report.

	1915	1916	1917
	\$ c.	\$ c.	\$ c.
Revenue from transportation .....	1,483,923 07	2,045,498 23	2,220,892 22
Revenue other than transportation.....	66,480 26	92,623 72	111,013 57
Total operating revenue .....	1,550,403 33	2,138,121 95	2,331,905 79
Operating expenses .....	1,356,049 87	1,594,177 46	1,881,296 29
Net operating revenue.....	194,353 46	543,944 49	450,609 50
Ore royalties.....	26,268 74	49,877 62	119,576 04
Rent from joint facilities .....	13,815 26	18,620 45	12,849 94
Rent from lease of road .....	16,601 37	13,347 04	13,624 15
Interest .....	.....	1,736 36	Dr. 5,649 48
Miscellaneous income.....	2,857 98	1,029 78	9,417 21
	253,896 81	628,555 74	600,427 36
Deductions from income .....	43,358 18	99,850 28	83,726 80
Net earnings .....	210,538 63	528,705 46	516,700 56

Operating expenses amount to 80.7 per cent. of gross earnings and the net earnings to 19.3 per cent., as compared with 74.6 per cent. and 25.4 per cent. respectively for the twelve (12) months ended October 31st, 1916, and 85.6 per cent. and 14.4 per cent. for the twelve (12) months ended October 31st, 1915. Earnings and expenses relating to Nipissing Central Railway are not contained in above figures, but are shown in separate statement on page 411 of this report.

[7]

The various statements contained in the financial report, fully itemized will show:—

From November 1st to October 31st.

	1915	1916	1917
	\$ c.	\$ c.	\$ c.
Revenue per mile of road.....	4,719 64	6,508 74	7,098 65
Expenditure per mile of road.....	4,128 00	5,173 27	6,001 93
Net revenue per mile of road.....	591 64	1,335 47	1,096 72
Miles operated .....	328.5	328.5	328.5

A decrease of \$238.75 in net revenue per mile of road as compared with 1916 and an increase of \$505.08 over 1915.

ANALYSIS OF EXPENDITURES.

During comparative period under consideration, accounts under head of "Expenditures" increased \$287,118.83 or 18 per cent., and "Deductions from Income" decreased \$14,182.10 or 14 per cent., or a net increase in operating cost of \$272,936.73 or 16 per cent.

DIGEST.

The above statement relating to comparison of Earnings and Expenditures for Fiscal Year 1917, discloses that the earnings in transportation were exceedingly good—showing a net increase of (a) \$175,393.99 or 8.5 per cent. over preceding fiscal year.

The various Revenue Accounts under "Incidentals" increased by (b) \$18,389.85 or 20 per cent., and "Other Income" produced an increase of (c) \$67,147.99 or 80 per cent.

Therefore, the general advance in earning increase is derived as follows:—

(a) Transportation .....	\$175,393 99	—	8.5%
(b) Incidentals .....	18,389 85	—	20
(c) Other income .....	67,147 99	—	80
Gross Revenue Increase .....	\$260,931 83	—	11.8%

(d) The expenditure increases in connection with operation, however, more than offset the general revenue increases—the various accounts under this heading resulting in an increase of \$287,118.83 or 18 per cent. for the period. Therefore, the increased transportation earnings of (a) \$175,393.99 were exceeded in increased cost of operation by \$111,724.84 or 67 per cent.

(e) Deductions from income, however, decreased \$14,182.10 or 14 per cent. during the comparative period, and this, combined with the increased earnings under (b) "Incidentals" \$18,389.85 and (c) "Other Income" \$67,147.99, make a total of \$99,719.94 to apply against the excess operation cost, leaving a debit balance of \$12,004.90 for period.

Therefore, though the gross earnings of fiscal year 1917 increased by \$275,113.93 or 12 per cent., the expenses of operation increased \$287,118.83 or 18 per cent., nullifying the advanced earnings and leaving a decrease in the year's operations of \$12,004.90 as compared with 1916. This defect would have been much larger and of a nature to seriously affect the net earnings if Ore Royalties had not produced an increased earning of \$69,698.42 for 1917.

CONDENSED STATEMENT, CHARGES TO CONSTRUCTION, YEARS 1915, 1916 AND 1917.

During fiscal year 1917 there have been expended the amounts in following statement under above heading. For comparative purposes fiscal years 1915 and 1916 are also shown.

	1917	1916	1915
	\$ c.	\$ c.	\$ c.

Chrysanthemums grown at Englehart, Ontario, 1917.

GENERAL.

For year under review as compared with 1915 and 1916, the percentages of operating expenses to operating revenue are as follows:—

1917.....	80.7%
1916.....	74.6
1915.....	87.5

Balance brought down from result of operation for year:—

1917.....	\$450,609 50
1916.....	543,944 49
1915.....	194,353 46

Above comparative results show that 1917 decreased \$93,334.99 as compared with 1916 and an increase over 1915 of \$356,256.04.

ORE ROYALTIES.

1917.....	\$119,576 04
1916.....	49,877 62
1915.....	26,268 74

An increase in 1917 of \$69,698.42 over 1916 and an increase of \$93,307.30 over 1915.

Net earnings for fiscal year 1917.....	\$516,700 56
“ “ 1916.....	528,705 46
“ “ 1915.....	210,538 63

Decrease 1917 of \$12,004.90 as compared with 1916.  
Increase 1917 of \$306,161.93 as compared with 1915.

We have transmitted to Provincial Treasurer for the year under review, cheque for two hundred and fifty thousand dollars (\$250,000.00).

MINES AND MINERALS.

Mining Engineer’s preliminary report only included herein. Regular and complete report for Fiscal Year 1917 will be specially published in usual form.

PATRIOTIC ASSOCIATION.

The employees of Commission in 1915 formed themselves into a body known as “ T. & N. O. Railwaymen’s Patriotic Association,” and through this source the following sums have been subscribed in monthly amounts and paid to “ Canadian Red Cross Society ” and “ Canadian Patriotic Fund ” to date of October 31st, 1917:

Total subscription to Red Cross Society .....	\$16,754 10
Total subscription to Canadian Patriotic Fund .....	20,257 13
Commission’s subscriptions .....	20,000 00
Donation to enlisted employees .....	13,765 16
Total .....	\$70,776 39

The above is exclusive of many personal subscriptions made direct by members of Commission and is exclusive of monthly payments to the 50,000 Club by the entire office staff, Toronto.

ROLL OF HONOUR.

Since the commencement of the war in August, 1914, up to date of October 31st, 1917, over twelve (12) per cent. of Commission's employees have joined the colours of their respective countries—particularly Russians and Italians.

To all those joining the ranks of the Canadian Expeditionary Forces—prior to Military Service Act of 1917 becoming effective—the Commission have instituted an honorary recognition therein, in the form of a money donation to each member, and to this end the sum of thirteen thousand seven hundred and sixty-five dollars and sixteen cents (\$13,765.16) has been disbursed.

CANADA'S VICTORY LOAN.

During the recent nation-wide campaign in connection with the Finance Minister's offer of \$150,000,000 5½ per cent. gold bonds, the employees of Commission subscribed the sum of \$76,450.00, representing three hundred and seventy-five subscriptions.

The original amount of \$150,000,000 was lost sight of and overwhelmed by the total subscriptions of four hundred and eighteen million dollars (\$418,000,000), representing 802,000 holders.

The immediate object of the "Victory Loan" was to provide for the financial needs of the nation, but a most important and lasting result has been obtained in that the widespread distribution of the loan has brought into the ranks of investors large numbers who hitherto have not given any thought to making sacrifices in order to save. This will have a marked influence on the future.

WORKMEN'S COMPENSATION ACT.

Since the inception of the Act in 1915, the Commission voluntarily placed themselves under the jurisdiction of the Board, and during period under consideration—January, 1915, to October, 1917, inclusive, thirty-four months—the results are as follows:—

One hundred and sixty-seven claims registered on Commission's books, and submitted to Workmen's Compensation Board for adjustment:—

92 claims passed and paid.  
69 claims disallowed.  
6 claims in abeyance.

The ninety-two claims passed and paid amount to \$7,586.88, an average of \$82.47. Liability insurance based on Commission's payrolls for period would have cost \$45,998.80 in premiums to protect Commission against possible losses under this heading or an average premium cost of \$499.98 to protect an average determined award of \$82.47.

Insurance premium during period would be .....	\$45,998 80
W. C. Board's awards amount to .....	7,586 88
<hr/>	
Cost reduction available .....	\$38,411 92

## FIRE RANGING.

From 1909 to 1917, inclusive, for fire ranging services along the line of T. & N. O. Railway the Commission have received from the Department of Lands, Forests and Mines, accounts which have been paid as follows:—

Year.	Amount.
1909.....	\$16,963 86
1910.....	10,000 00
1911.....	20,000 00
1912.....	5,000 00
1914.....	5,000 00
1915.....	10,000 00
1916.....	29,374 00
1917.....	10,000 00
Total .....	\$106,337 86

## FOREST FIRES—NORTHERN ONTARIO, JULY 29-30TH, 1916.

Statement following brings Commission's position up to date of October 31st, 1917, and completes the losses of all properties destroyed under above heading—enumerating the loss values and insurance recovered—with percentages under accounts named:—

Buildings and structures .....	\$40,034 35	
Building contents .....	2,498 41	
Bridges and culverts .....	1,091 85	
Freight in transit .....	38,747 85	
Freight in transit—steam shovel, derricks....	9,023 99	
Rolling stock—foreign .....	54,462 70	
Rolling stock—additional .....	423 26	
Rolling stock—Commission's .....	7,671 53	
Sundry outstanding claims .....	7,385 48	
	\$161,339 42	
Insurance recovered .....	112,552 06	
		\$48,787 36
Commission's loss .....		
Fencing destroyed—no insurance .....	\$3,001 00	
Ties destroyed—no insurance .....	3,310 96	
Track damaged—no insurance .....	520 04	
Telegraph poles and wires—no insurance ....	3,309 94	
Relief to fire sufferers—Special trains .....	1,491 53	
Relief to fire sufferers—transportation .....	8,077 10	
Relief to fire sufferers—telegraph account....	164 13	
Fighting fires—sundries .....	14,987 26	
		34,861 96
Commission's uncontrollable loss .....		
		\$83,649 32
Gross loss .....		2,385 59
Commission's pro ratio of scrap recovery .....		
Commission's loss—total .....		\$80,663 73

There are several small outstanding claims under consideration which will be paid by insurance companies when presented—lateness of presentation in all cases being due to delay of claimants in making claims against Commission.

Comparison of payrolls since commencement of operation:—

1905.....	\$216,119 37
1906.....	450,214 02
1907.....	574,959 09
1908.....	687,541 66
1909.....	681,072 47
1910.....	878,192 07
1911.....	783,218 89
1912.....	1,090,310 65
1913.....	1,218,473 04
1914.....	1,112,866 73
1915.....	953,209 41
1916.....	1,127,885 74
1917.....	1,273,967 54
	<hr/>
	\$11,048,030 68

It will be noted that fiscal year 1917 shows an increase over preceding year of \$146,081.80 and this is occasioned by further increases in wages to the several departments noted below to the extent of the approximate amounts so shown:—

Transportation Department .....	\$40,300 00
Maintenance of Way Department .....	52,850 00
Motive Power and Car Department .....	30,550 00
Miscellaneous .....	22,381 80
	<hr/>
	\$146,081 80

NOTE.—The above table of comparative costs discloses that purchases of articles, based on same quantities and amounts in each year, cost in 1917 fifty per cent. (50%) more than 1915, and twenty-seven per cent. (27%) more than in 1916.

## BITUMINOUS ANTHRACITE COAL.

The conditions surrounding the Bituminous Coal Market during the past year have been most perplexing and difficult, and emphasize the very serious distress suffered by the country at large in consequence of the general fuel shortage.

Owing to the enormous increase in manufacturing demands throughout the United States and Canada, and consequent increased railway tonnage due to existing war conditions, the demand for bituminous coal during the past two years has greatly exceeded the normal supply. Contributing to these conditions has been the disorganized labour market which particularly affected the mining industry. The greatly increased wages offered by steel mills and allied industries have practically established every other rate of pay in the zone of operation, and this is particularly true of Pennsylvania. When a steel company raises its base labour rate, other employers, if they wish to retain their men, must necessarily meet the advances, and in consequence, the prevailing rates of wages in coal mining are reflected in the cost of the coal at the mines. It is recorded that the lowest rate of pay in coal mining for commonest class of labour is \$4.75 for an eight-hour day.

The conditions existing in 1915 forecast an unmistakable shortage in 1916—in that year was indicated a worse state of affairs for 1917, and this was fully demonstrated in the great difficulty the railways had in securing sufficient fuel to operate a limited and restricted schedule.

These conditions prevailed from the Atlantic to the Pacific, and it follows that the railways are confronted with an increase in fuel costs averaging one hundred per cent. (100 per cent.) advance, as compared with pre-war prices.

The United States Government estimates that there will be a coal shortage this year of fifty million tons. The operators maintain, however, that it will be much greater than this. In some cases they say, where the estimate of the visible supply was based on railway reports, the Government investigators have figured on the same coal as many as three times. The railroad congestion was responsible for the error. In order to get better delivery coal has been shipped over unusual routes, and thus each of the connecting lines that handled this new business had incorporated it in its report. However, a shortage of fifty million tons is sufficiently serious to create alarm and cause the railways great apprehension.

Owing to the very favourable coal contracts entered into by Commission in 1914-15, the supply of fuel for these periods was fully assured and extended into 1916, but in 1917 it was found necessary to go into the open market for requirements to supplement the contract fuel supply, which for obvious reasons was greatly reduced in quantity and difficult to secure.

The following statement fully covers all transactions under this heading for fiscal year 1917.

Threshing Alsiko, 100 bushels, on farm of Mr. Roy Pacey, two miles from Milberta, Ontario, September, 1917.

STATEMENT RELATING TO BITUMINOUS COAL PURCHASED DURING

Special Representative's expenses.....				1,938 81
		243,447,769		727,717 48
On hand November 1st, 1916.....		22,049 tons		
Received during fiscal year 1917.....		99,675 "		
Total for period .....		121,724 tons		

For comparative purposes the quantity and values of coal consumed during last three years is given below:—

	Tons Consumed.	Total Cost.	Average per ton.
Fiscal year 1915.....	58,711	\$245,747 00	\$4 19
“ 1916.....	83,243	363,861 00	4 37
“ 1917.....	78,943	487,263 14	6 17

Which indicates an increase in cost of fuel in 1917 of approximately 50 per cent. over 1915 and 41.3 per cent. over 1916.

If consumption of coal in 1917 had equalled that of previous year, the cost to Commission, by reason of enhanced coal prices, -would have been \$513,609.31 or \$149,748.31 in excess of 1916—41.3 per cent.

Insurance—Fire.

During the year fire insurance has been maintained on Commission's property to the extent of \$2,020,245 valuation under the following headings:—

Buildings and Contents.

Division No. 1—buildings .....	\$267,230 00	
“ 1—contents .....	143,000 00	
“ 2—buildings .....	107,225 00	
“ 2—contents .....	33,650 00	
Kerr Lake Br. —buildings .....	600 00	
“ —contents .....	100 00	
Charlton Br. —buildings .....	7,100 00	
“ —contents .....	1,300 00	
Porcupine Br.—buildings .....	70,400 00	
“ —contents .....	16,800 00	
Elk Lake Br. —buildings .....	16,100 00	
“ —contents .....	3,250 00	
Nipissing Central Ry.—buildings .....	10,425 00	
“ —contents .....	23,040 00	
		\$700,220 00

Bridges and Trestles.

Division No. 1 .....	\$4,900 00	
“ 2 .....	10,950 00	
Kerr Lake Branch .....	5,000 00	
Charlton Branch .....	10,150 00	
Porcupine Branch .....	11,750 00	
Elk Lake Branch .....	12,400 00	
		\$55,150 00

Freight.

Merchandise in transit .....	\$200,000 00	
		\$200,000 00

Rolling Stock.

Locomotives and tenders .....	\$255,000 00	
Passenger equipment .....	320,700 00	
Freight equipment .....	308,150 00	
Work equipment .....	85,975 00	
Electric railway equipment .....	45,050 00	
Foreign equipment .....	50,000 00	
		\$1,064,875 00
Total .....		\$2,020,245 00

The rate of insurance is \$1.50 per \$100.00 for a period of three years, or 50c. per \$100.00 per annum for period 1915-1917, inclusive.  
Three year contract period expires December 1st, 1917.  
Insurance under joint schedule is divided as follows:—  
Western Assurance Co., 50 per cent.; Norwich Union Fire Insurance Society, 15 per cent.; Home Insurance Co., 35 per cent.

**DENIS MURPHY, COMMISSIONER, DECEASED.**

---

It is with great regret that we are called upon to record the death of our brother Commissioner, Denis Murphy, which occurred at his residence, Ottawa, on Saturday, March tenth, Nineteen seventeen.

For twelve years the late Commissioner had taken a prominent and active part in all matters pertaining to the duties of his position—with the paramount desire at all times to advance the best interests of the Temiskaming and Northern Ontario Railway, and also the various public utilities of the Province of Ontario, with which he had so long been closely associated, and had so faithfully served.

Resolution of condolence with his family was inserted in the minutes of the Meeting and copy of same transmitted to the widow with Commission's expressions of sorrow and deep sympathy in her bereavement.

## AUDITORS' REPORT

We have pleasure in directing attention to a letter from Edwards, Morgan & Co., Chartered Accountants, Toronto, respecting the accounts.

J. L. ENGLEHART, Esq., Chairman,

*Temiskaming and Northern Ontario Railway Commission,*

Toronto, Ont.

DEAR SIR,—Under instructions from the Commissioners we have maintained a running audit of the accounts of the Commission for the year ending October 31, 1917. Our examination has included the Cash Receipts and Disbursements, Accounts Collectible, Accounts Payable, Agents' and Conductors' Accounts, Foreign Tickets, Foreign Freights, Car Mileage Accounts and Bank Balances:

We certify that all transactions relating thereto have been properly vouched, and that the Cash and Bank Balances have been duly accounted for. We have verified the balances of accounts outstanding and have ascertained that they correspond with the General Ledger Accounts.

We find the books in good order and all information asked for has been promptly given.

We are,

Yours faithfully,

EDWARDS, MORGAN & Co.

**COUNSEL'S REPORT—D. E. THOMSON, K.C.****Litigation.**

At the end of the financial year there were no actions pending in which the Commission was defendant.

There is only one action pending in which the Commission is plaintiff, namely: T. & N. O. vs. Abitibi Pulp and Paper Company. Action for indemnity under siding agreement in respect of amounts paid in settlement of claims arising out of an accident on the siding of the defendant Company. Negotiations for settlement of action are at present pending.

**Damage Claims.**

As usual a large number of claims have arisen during the year in respect of freight, baggage, etc., lost, destroyed, delayed, mislaid or damaged, also claims for personal injuries and for cattle killed on Commission's right-of-way, and claims of passengers for delay due to exceptional snow storms. Most of these claims have been adjusted or abandoned while others are still pending. None have been placed in suit.

**Fire Claims.**

A considerable number of claims have arisen in respect of baggage, freight, etc., damaged or destroyed in forest fires of July, 1916. Most of these claims have either been adjusted or abandoned. None have been placed in suit.

**Insurance on Rolling Stock and other Property.**

Satisfactory adjustment has been effected with Insurance Companies covering claims of Commission in respect of rolling stock and other property destroyed or damaged in forest fire of July, 1916.

**Agreements, Leases, Contracts, etc.**

A considerable number of agreements, leases and contracts, covering various miscellaneous matters between the Commission and others have been prepared and executed.

**Grand Trunk Railway Company, Grand Trunk Pacific and National Transcontinental Railway.**

This matter is still standing for adjustment. Meantime a temporary through train service over the Commission's lines is being operated in conjunction with Canadian Government Railways and Grand Trunk Railway on terms suitable for such limited service.

**Cochrane Freight and Passenger Facilities.**

An agreement with His Majesty the King, represented by the Honourable the Minister of Railways, covering the joint use by the Canadian Government Railways and the Commission of the passenger and freight facilities at Cochrane has been negotiated and executed.

### North Bay Freight Yard

A number of questions have arisen during the year between the Commission and the Grand Trunk Railway in reference to the Grand Trunk's rights in the Commission's North Bay freight yard. Some of these have been adjusted, others are still pending.

### Nipissing Central Railway.

A number of claims, including some for personal injuries, were made during the year. Some have been settled and others abandoned, but in no case has a writ been issued.

### Cobalt Assessment.

During the year the question arose as to the assessment by the Town of Cobalt of the Nipissing Central Railway's right-of-way, overhead structures, etc. The Company appealed from the assessment and subsequently the matter was satisfactorily adjusted with the Town Authorities.

### Miscellaneous.

Numerous other questions on various subjects affecting the Commission and the Nipissing Central Railway have arisen during the year calling for the consideration of the Legal Department.

---

T. & N. O. Railway Gardens, Englehart, Ontario, 1917.

ANNUAL REPORT OF CHIEF ENGINEER AND SUPERINTENDENT  
OF MAINTENANCE, T. & N. O. RAILWAY.

Year ended October 31st, 1917.

W. H. MAUND, Esq.,  
*Secretary-Treasurer,*  
*Toronto, Ontario.*

DEAR SIR,—I beg to submit the following report of the Engineering, Main-  
tenance of Way and Mechanical Departments of the Temiskaming and Northern  
Ontario Railway, for the fiscal year ended October 31st, 1917.

Mileage and Equipment.

There has been no change in the main track mileage, but a considerable in-  
crease in the mileage of tracks, railway sidings and private sidings.

Operated by the Commission:

	Oct. 31, 1917.	Oct. 31, 1916.
First Track .....	328.50 miles	328.50 miles
Second Track .....	1.70 "	1.70 "
Yard Tracks and Sidings .....	99.84 "	98.31 "
Private Sidings .....	14.21 "	10.44 "
	<hr/> 444.25 "	<hr/> 438.95 "
Leased to Grand Trunk Railway:		
Nipissing Junction Spur .....	2.10 "	2.10 "
Leased to Nipissing Central Railway:		
Main Track .....	10.45 "	10.45 "
Yard Tracks and Sidings .....	1.65 "	1.65 "
Private Sidings .....	1.03 "	1.16 "
	<hr/> 13.13 "	<hr/> 13.26 "

Details of all track changes are shown in statements included in this report.  
The equipment owned by the Commission consists of the following:—

	Oct. 31, 1917.	Oct. 31, 1916.
Locomotives .....	49	43
Passenger Cars .....	65	66
Freight Cars .....	593	620
Work Cars .....	107	89

Surveys and Construction.

*Kirkland Lake Branch:*

Surveys for the location of a branch line to serve the Kirkland Lake Gold  
Camp have been made. The proposed branch will connect with the main line at  
Swastika. The location that has been selected passes close to all producing mines  
and the more promising prospects. It will be six miles long, and as the country  
through which it passes is comparatively rough, and as the traffic will probably  
never be very heavy, grades of 1.5 per cent. and curvature up to 12° were used,

permitting the cost of construction to be kept within reasonable limits. At the beginning of the fiscal year when the survey was made, it was estimated that the cost of construction would be \$125,000, and this amount was included in the Legislative Estimates.

The present is not an opportune time to commence any large engineering undertaking, as through the scarcity of labour and materials, the cost will be greatly in excess of that under normal conditions. The Commission has, however, closely watched the development of this promising camp and, as the necessary surveys have been completed, the branch can be placed under construction without delay, as soon as a decision to build is made.

Main Line Revision:

In the last report mention was made of three proposed revisions of the main line, viz:—

Mileage 54	←55
" 63	—66.5
" 80.8	—81.2

The grading of the first of these was partially completed during the year 1916-17, the work being done by the Road Department forces.

This year tenders were called for the grading of the other revisions, those of Mileage 63—66.5 and 80.8—81.2, and the following is a comparison of the tenders received:—

Item.	Quantity.	Bourke & McGuinty.	Port Arthur Construc- tion Company.	Jones Girouard & Company.	Dominion Construc- tion Company.	Henderson & Angus, W.A.Cock- burn and Lindsay & McCluskey
		Unit price.	Unit price.	Unit price.	Unit price.	Unit price.
		\$ c.	\$ c.	\$ c.	\$ c.	\$ c.
Clearing .....	24 acres ..	60 00	60 00	80 00	90 00	80 00
Close Cutting.....	1 acre ...	45 00	75 00	60 00	40 00	150 00
Grubbing .....	2 acres ..	200 00	150 00	200 00	200 00	175 00
Solid Rock.....	20,600 c.y.	1 94	1 70	1 75	1 85	2 40
Loose " .....	4,000 "	75	75	80	75	80
Common Exc. ....	50,000 "	54	35	40	40	60
Overhaul .....	50,000 "	01	01	01	01	01
Telegraph poles cut on R. of W.	Each .....	1 00	1 00	3 00	1 00	50
Fence posts cut on R. of W...	" .....	10	10	10	15	05
Ties cut on R. of W.....	" .....	20	25	28	20	20
Timber cut on R. of W. per 1000 ft. B.M.....	.....	15 00	8 00	10 00	2 50	8 00
Concrete						
1:2:4.....	Per c.y....	15 00	13 00	12 00	14 00	10 00
1:3:5.....	66 " ..	15 00	12 00	10 00	13 00	9 50
Cast Iron Pipe						
12in. Dia. ....	20 lin. ft.	25	1 00	25	60	15
Concrete Pipe						
24in. Dia. ....	45 lin. ft.	75	1 25	75	2 00	50
36in. Dia. ....	180 " "	1 00	1 50	1 50	2 50	50
Total tender based on estim- ated quantities.....	.....	73,557 75	58,973 25	63,098 75	65,620 00	86,302 50

The lowest tender, that of the Port Arthur Construction Company, was accepted and a formal contract was entered into by the Commission and the Company. The contractors have experienced great difficulty in obtaining the necessary labour, but good progress has been made on the larger of the two diversions, that between Mileage 63 to 66.5, over half of the grading having been completed. All of the grading on both diversions should be completed by July 1st, 1918.

### Additions to Road and Equipment.

#### ROAD.

During the year efforts were made to carry on as fully as possible those works which were required for the betterment of the Commission's property. The more important of these improvements and additions are:—

#### *North Bay Junction:*

The enlargements of the locomotive repair shops, under construction at the end of the last fiscal year were completed as follows:—

Brick Extension at east end of Machine Shop, 52' 9" x 85' 6".

Brick Extension on north side Machine Shop, 25' x 100'.

New Frame Blacksmith Shop, 30' x 80', with an annex 20' x 27' to house flue cleaning machines.

New Frame Wheel Shop, 30' x 80'.

This work was all done by the Bridge and Building Department, except the brickwork, a contract for which was awarded W. A. Martyn, North Bay.

The following additions were commenced and completed during the year:—

An electric motor hoist for handling the ice in ice house.

All concrete foundations for new machine tools for machine shop and blacksmith shop.

A new oil and waste reclaiming plant building 12' x 18'.

A combined Car Department Stores Building and Blacksmith Shop 17' x 80', also scrap rubber house 10' x 30', with enlargement of scrap bins and platforms.

Kaustine lavatories were installed in the Master Mechanic's office building and at coach shop, while a large one is now being installed for the machine shop.

Mileage 14.26.—Timber culvert replaced by a 24" concrete pipe.

Mileage 30.76.—Beam culvert replaced by a 36" concrete pipe and embankment.

Mileage 40.9.—A spur siding 767' long was put in for the Pembroke Lumber Company, who were taking out a large quantity of logs east of Diver. This siding is now being moved to Mileage 42.8.

Mileage 43.7.—The McNamara Lumber Company are also taking out considerable lumber in this vicinity. A spur siding 964' long was constructed for them at Mileage 43.7 and another 828' long at Mileage 46.7.

Mileage 45.25.—A spur siding 780' long was built for the Spanish River Pulp and Paper Company for handling pulpwood.

Mileage 52.81.—Open beam culvert replaced by a 30" concrete pipe and embankment.

Mileage 93.25.—A spur siding 622' long was built for Mr. G. C. Smith.

*New Liskeard Spur:*

A 12' open beam culvert was constructed on this spur.

*Uno Park:*

A freight shed 30' x 30' was constructed to take care of the growing business at this station.

A kaustine lavatory was installed in the Agent's residence.

Mileage 120.4.—A spur siding 300' long is being built to provide facilities for the shipment of forest products.

*Earlton Junction:*

Two stock pens 35' x 40' were built to take care of the requirements of this growing farming centre.

*Leeville:*

A standard frame shelter 10' x 30' was built for the accommodation of passengers waiting for trains at this stop.

*Mountain Chutes:*

The standard frame shelter at Three Nations station on the Porcupine Branch was moved to this flag stop.

*Englehart:*

In August last a portion of one of the tenement houses was destroyed by fire. Our forces made the necessary repairs, also put concrete floors in the basements and installed sewer and water systems.

A car foreman's office and shop 20' x 36' was built, also a hard coal shed 14' x 18' for storing coal for the passenger cars.

Mileage 148.—A spur siding 239' long was built for Thomas Woollings. It is expected that a considerable quantity of forest products will be shipped from this point.

*Mindoka:*

A spur siding 282' long was built at this place.

Mileage 153.—A spur siding 425' long was built at this point to serve the mining district to the east of the railroad.

Mileage 162.3.—The filling of this trestle was completed.

*Swastika:*

To increase the facilities for handling the traffic in coal at this station a trestle was built so that the cars could be unloaded without delay and the coal hauled away later. In this connection a spur siding 432' long was built.

Mileage 181.3.—The timber trestle at this point is being replaced by a 55' steel span and embankment.

*Bourkes:*

A freight shed 25' x 25' and an employee's camp 14' x 18' were built at this station.

Vimy Ridge:

The standard frame shelter at Connaught was moved to Vimy Ridge on the completion of the new station at the former place.

Matheson:

The fire of July 29th, 1916, destroyed all the Commission's buildings at Matheson. At the close of last fiscal year these had all been completely rebuilt with the exception of the stone passenger station. The station was rebuilt with brick, all the work being done by our own forces.

Nushka:

A standard frame shelter 10' x 35' was built to replace the one destroyed in the fire of July 29th, 1916.

Monteith:

A frame freight shed 20' x 30' was built by our own forces.

To serve the needs of this growing community a frame station 25' x 45', with agent's residence included, is being built by contract, the successful tenderers being Van Rassel Bros. of Cochrane. The following is a comparison of the tenders received:—

6 inch Tile Drain, Wooden Platform, Total Cost of Work included in Specification.

Contractor.	Lump sum price.	Cemented joints.	Open joints.	Cedar mudsills.	Pine joists and planking.	Tenders.
	\$ c.	\$ c.	\$ c.	\$ c.	\$ c.	\$ c.
Van Rassel Bros., Cochrane.....	6,550 00	452 00	81 00	190 40	1,061 50	8,334 90
Henderson and Angus, North Bay.	8,437 00	367 25	81 00	57 12	1,158 00	10,100 37
J. P. Quinlan, North Bay.....	8,350 00	452 00	94 50	238 00	1,061 50	10,196 00
D. Barker & Co., North Bay.....	8,800 00	395 50	87 75	190 40	1,061 50	10,535 15
T. N. Colgan, North Bay .....	7,033 00	423 75	98 55	95 20	965 00	8,615 50

Kelso:

A standard frame shelter 10' x 35' was built to replace the one destroyed in the fire of July 29th, 1916.

Perquis Junction:

A considerable enlargement of this yard was started, but owing to the shortage of labour the programme as laid out was much curtailed. However, sufficient additional sidings were provided to greatly increase the traffic handling facilities of this important junction point. A total of 5,618 lin. ft. of sidings was laid and seven switches installed. Besides the tracks laid, the culverts, wherever necessary, were lengthened and other improvements made.

Nahma:

The section house and tool house destroyed by the fire of July 29th, 1916, have been rebuilt by our own forces.

*Cochrane:*

Three camps, each 18' x 34' were built for the employees of the Motive Power and Car Department.

Suitable lunch counters, refrigerators and other necessary equipment, having been installed in the station restaurant, it was opened and operated by the lessee Mr. Arthur Stevens, effective August 1st, 1917.

A transfer siding 2,224' long was built for the interchange of traffic between the T. & N. O. and C. G. Railways.

Car repair tracks are now under construction.

*Jacinto:*

A standard frame shelter 8' 6" x 12' was built.

*Iroquois Falls:*

The engine shed destroyed in the fire of July 29th, 1916, was rebuilt.

A bunk-house 18' x 24' was built for the employees of the Motive Power and Car Department.

The four semi-detached tenement houses under construction at the end of last year were completed.

A 40' extension was built to the west end of the freight shed and 25' of the east end of the building made into freight offices.

Lavatory fixtures and drainage system was put in the station and electric light systems installed in the station and the dwelling houses.

A great deal of work was done in fixing roadways on the station grounds and improving the grounds.

To handle the ever increasing business from the mill of the Abitibi Power and Paper Company, another transfer siding 836' long was installed by the Commission and a coal unloading spur 616' long was built for the company.

*Connaught:*

Connaught, situated on the Frederick House River, is rapidly developing into a very important point for the shipping of forest products.

The St. Maurice Lumber Company has erected a large mill for the rossing of pulpwood, and constructed a siding 5,630' long from Barber's Bay along the old lake bottom to serve their plant.

Reamsbottom & Edwards have also completed a large mill for rossing pulpwood and have constructed two spurs, one 1,360' and the other 1,005' long to serve their plant.

Owing to the growing importance of the shipping from this point, a combined station and freight shed 25' x 65' has been erected.

A one storey frame agent's dwelling 22' x 42' 6", and a sectionmen's bunk-house 14' x 18' have been built.

On September 12th last the pumphouse was destroyed by fire. A new one has been built on a more suitable site.

Mileage 11.0, Porcupine Branch.—A spur siding 262' long was put in for the Monteith Pulp and Timber Company.

*Hoyle:*

At Hoyle the Porcupine Pulp and Lumber Company has erected a large mill on the bank of the Porcupine River for the handling of pulpwood and lumber. A spur siding 1,132' long was installed to serve the mill.

Mileage 18.4, Porcupine Branch.—A spur siding 247' long was built for J. M. Forbes for the handling of forest products.

*Timmins:*

The new brick passenger station, under construction at the end of last year, was completed by the contractors, Messrs. Henderson & Angus, North Bay. The old frame station was moved to a more suitable site and is now used exclusively as a freight shed and office.

In connection with the change of location of the freight shed, additional sidings were provided as follows:—

No. 1	Freight Shed Track	—438'	long.
No. 2	“ “ “	—360'	“
No. 1	Team Track	—712'	“
No. 2	“ “	—768'	“
No. 3	“ “	—439'	“

Except where otherwise noted, all the above additions were made by the Commission's forces.

**Equipment.**

The Mechanical Department has suffered similarly from the scarcity of labour and materials, and despite the most strenuous efforts to relieve it there has grown an accumulation of repairs to rolling stock. At the beginning of the fiscal year six new Mikado locomotives were received from the Canadian Locomotive Works, Kingston. These were of the greatest assistance in handling the traffic during the year. Arrangements are now being made to have a number of the older locomotives repaired at an outside shop to relieve the situation. At the same time these locomotives will be equipped with superheaters and other modern devices that will largely increase their efficiency.

In the accompanying report of the Master Mechanic will be found a very complete statement showing the amount and character of repairs that have been made to rolling stock.

**Maintenance of Way.**

In the last annual report reference was made to the increasing scarcity of labour and difficulty in obtaining materials required for repairs and renewals. During the present year these difficulties greatly increased. It may be truly said that at no time in the past have the railways of Canada been confronted with the conditions they are meeting at present.

It has been necessary to greatly curtail the progress of maintenance of way work that was laid out, and in many respects only the absolutely essential work could be performed.

Contracts for rails, ties and other track material required for current renewals had been made, but the contractors failed to fill their contracts, and it was necessary to make only partial renewals of rails and ties. The Commission's policy of a high standard of maintenance in former years has enabled it to meet the present conditions without serious deterioration of the track and roadbed.

### Future Tie Supply.

The Commission has obtained from the Department of Lands, Forests and Mines, the reservation of the tie timber on several townships tributary to Night Hawk Lake, as shown on the accompanying map. There are several large stands of jack pine on this reservation from which it is estimated the Commission will be able to obtain all the ties it requires for renewals for at least twenty years. It is proposed to contract the cutting of the timber and the making and delivering of the ties at Connaught, where the Porcupine Branch crosses the Frederick House River. The timber will be cut under suitable restrictions and necessary precautions will be taken to preserve the reservation from damage by fire.

It is hoped that before long a creosoting plant will be built in Northern Ontario, at which all ties could be creosoted. A proper treatment with creosote will probably increase the life of a jack pine tie from eight to twenty years, provided suitable tie plates are used to protect the face of the tie from mechanical wear. The growing scarcity of suitable tie timber and the increased cost of ties, and the greatly increased wages now paid trackmen, make a reduction in the tie renewals a matter of first importance.

### Wages of Employees.

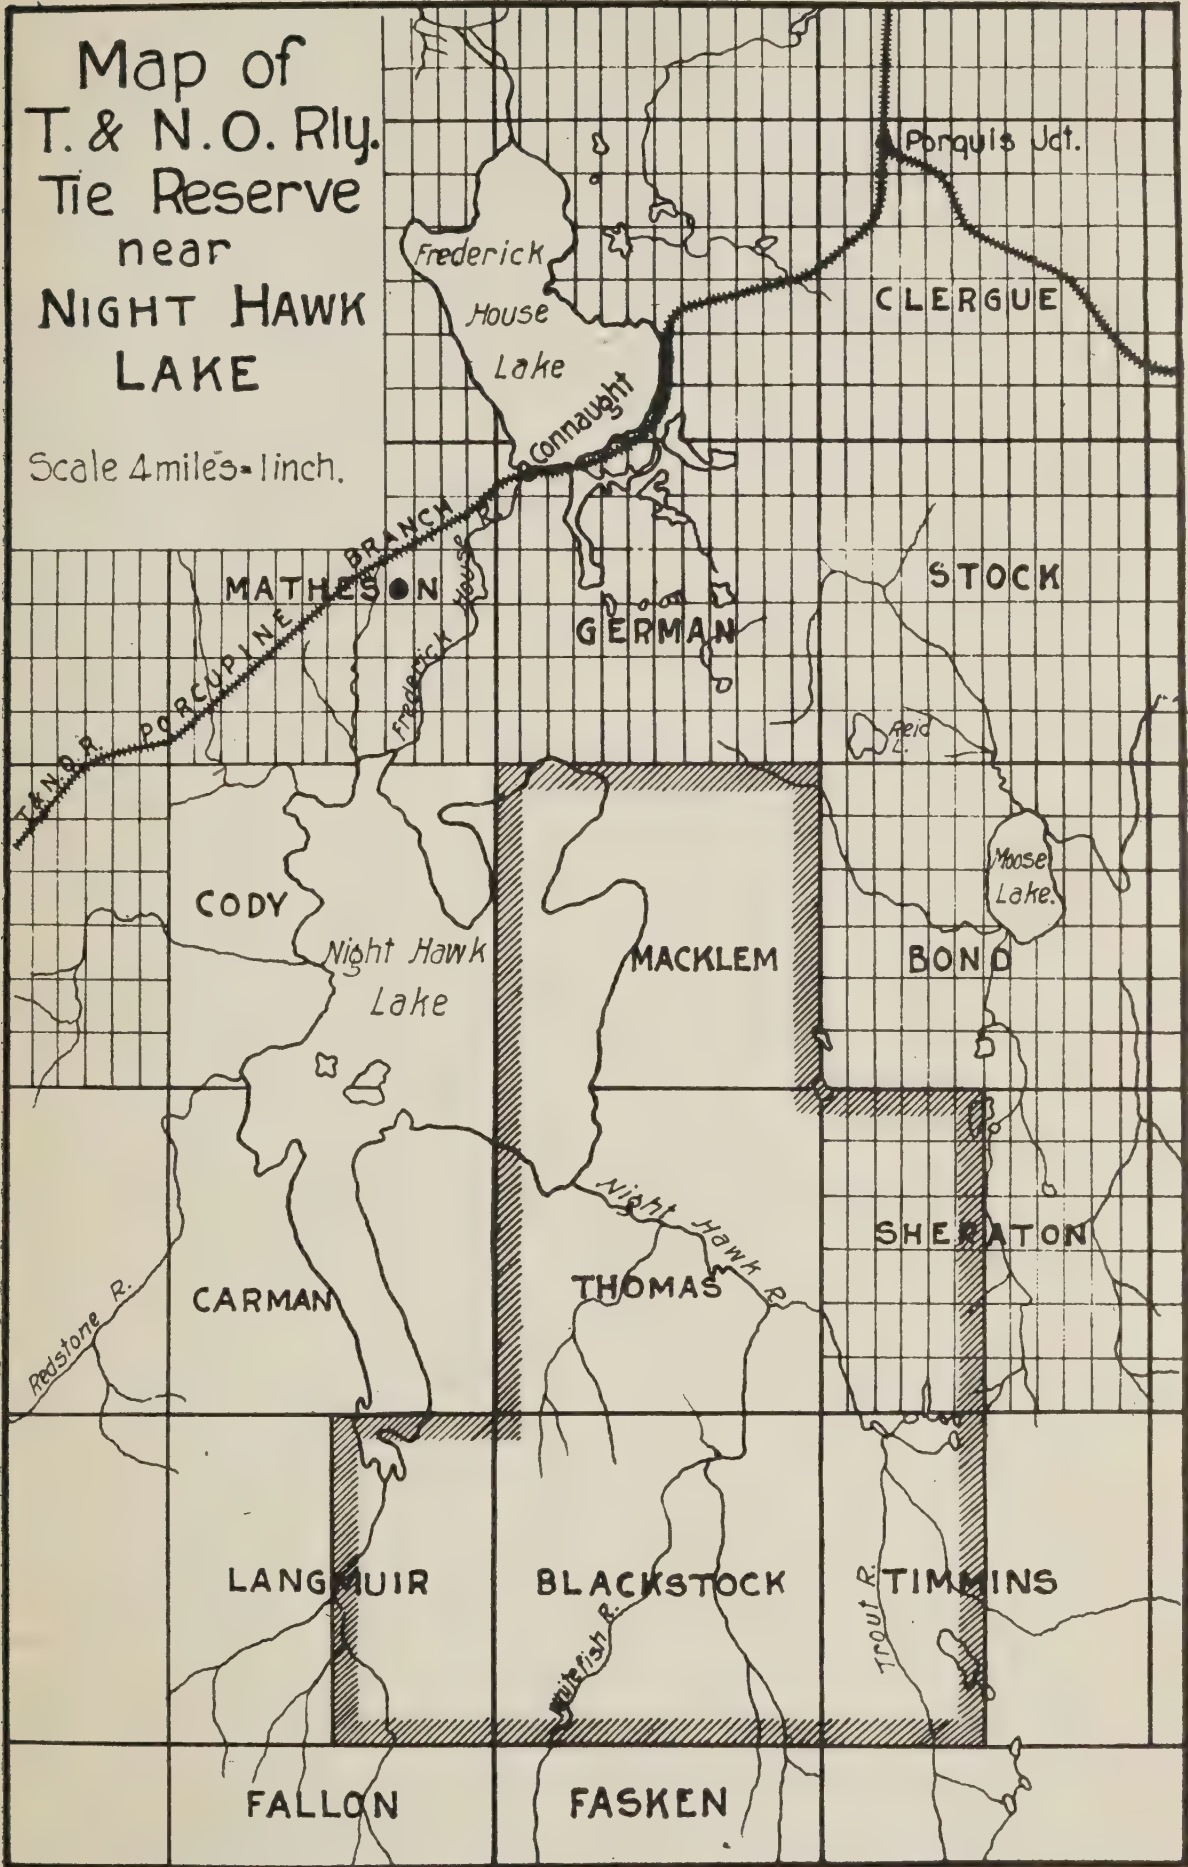

During the year there has been a great increase in our expenditures, notwithstanding the most energetic efforts that have been made to reduce our operating expenditures. These increases are almost altogether due to the very great advance in the cost of all materials that are used and the increased rates of pay to employees.

During the year all organized employees in the Motive Power and Car Departments and the Maintenance of Way Department have been granted revised rules of service and greatly increased rates of pay.

The following tables show a comparison between the principal rates that were paid in October, 1916, and October, 1917:—

#### *Motive Power Department.*

	Oct., 1917. Per hour—cents.	Oct., 1916. Per hour—cents.

Iroquois Falls.....	Additional Transfer Siding .....	836
	Total .....	10,334

Twenty-six sets of switch ties were also renewed.

The following table, giving a comparison of track tie renewals for the past four years, shows a decided reduction in the number of ties renewed during the last two years. This is accounted for partly by our inability to secure sufficient ties and labour to put them in the track, and partly by the fact that the ties used during construction have been nearly all renewed and renewals are now more evenly distributed from year to year:—

Fiscal Year.	Main Line.		Branch Lines.		Sidings and Spurs.	
	Total.	Per Mile of Track.	Total.	Per Mile of Track.	Total.	Per Mile of Track.
1914 .....	87,259	346	290	3	9,414	88
1915 .....	87,948	348	3,683	46	11,680	106
1916 .....	72,480	287	9,084	114	11,270	107
1917 .....	52,202	205	6,618	84	5,114	45

Ballasting:

Owing to the shortage of labour no ballasting was done this year.

Rail Renewals:

The rail renewals for the year were as follows:—

Mileage 72 to 76—4 miles 90 lb. A.R.A. Type “A” Rail.  
Mileage 76 to 79.75—3¾ miles 85 lb. C.P.R. Section Rail.

The accompanying report of the Motive Power and Car Department for year ending October 31st, 1917, prepared by Master Mechanic Thomas Ross, contains additional detailed information in reference to the operation of this department.

In conclusion, I would take this opportunity of expressing appreciation of the faithful and efficient service rendered by the officers and employees.

Respectfully submitted,

S. B. CLEMENT,  
*Chief Engineer and Superintendent of Maintenance.*

T. & N. O. Railway Depot, Temagami, Ontario, September, 1917.

## MOTIVE POWER AND CAR DEPARTMENT.

S. B. CLEMENT, Esq.,  
C. E. & S. of M.

DEAR SIR,—Beg to submit the following report of the Motive Power and Car Department for the year ending October 31st, 1917.

*New Locomotives:*

In November, 1916, the Canadian Locomotive Company, Limited, Kingston, delivered the remaining four "Mikado" type locomotives on the contract of March, 1916. A general description of these engines was included in the annual report of the Motive Power and Car Department for 1916.

During the year that these locomotives have been in service they have proven very satisfactory.

*Alterations and Repairs to Locomotives:*

With the view of effecting all possible economy in the matter of fuel consumption, it has been the intention for some time to proceed with the installation of superheaters, brick arches, etc., on the older types of locomotives. All the engines built for the road since 1909 have been equipped with these devices which have thoroughly proven their merit.

Owing to labor conditions and volume of other work it has been impossible to go ahead with these changes at our shops here.

The matter has been taken up with the different locomotive manufacturers and the Canadian Locomotive Company have undertaken the work of equipping eight ten-wheel engines with these appliances, and at the same time, give these engines a complete overhauling.

*New Freight Cars:*

In May, contract was given the Canadian Car and Foundry Company, Limited, for 100 box cars, delivery of same to be made towards end of this year. These are to be 36'-80,000 lbs. capacity cars with steel framing and single sheathing. They will be equipped with Arch Bar trucks, friction draft gear, and inside metal roofs.

*New Conductor's Caboose Cars:*

During May, June and July, the Preston Car and Coach Company delivered the six caboose cars on their contract of June, 1916.

These cabooses are the T. & N. O. standard type, 29' long over end sills with steel underframes and equalized pedestal trucks.

*New Machine Tools:*

The following machinery has been added to the equipment of the Machine Shops at North Bay Junction:

One No. 6, type B, pneumatic hammer; one 200-ton electric hoist; one centering machine; one 24-inch shaper; one 8-inch power hack saw; one tube cleaning machine; one safe end machine; one tube welding furnace; one combination hot saw and tube expanding machine; one tube welding machine; one No. 02 stationary forge; one 5-ton hand travelling crane; one oil and waste reclaiming outfit, consisting of one 20-inch waste machine and one 15-inch centrifugal oil separator.

*Summary of Extensive Repairs to Locomotives:*

— Since November 1st, 1916, the following locomotives have been through our shops at North Bay Junction for repairs:—

Given General Repair:—106, 108, 124, 131, 133, 137, 138, 150, 151.

Given Heavy Repair:—101, 111, 113, 117, 119, 123, 130, 134, 135, 136.

Given Light Repair:—106, 109, 123, 127, 133, 139, 145.

Note: The term "General Repair" as applied above refers to cases where an engine has been given a thorough overhauling and rebuilt. Heavy repair refers to cases where an engine has received such repairs as driving tires turned, driving boxes renewed, valves, piston rings, and side rod bushings renewed. Light repair refers to cases where an engine has received minor repair such as renewal of side rod bushings, piston rings and valve rings.

All requirements of the Dominion Railway Commission in regard to washing out and testing boilers, testing stay-bolts, examining nettings and dampers, etc., have been fully complied with, and during the summer months periodical inspection of all fire protective appliances on engines has been made by a Government Inspector.

*Engine Despatch:*

Statement showing the number of engines despatched from different terminal and divisional points during the year:—

Station.	Number of Engines Despatched.
North Bay Jct. ....	6,315
Elk Lake .....	391
Englehart .....	4,391
Iroquois Falls .....	362
Timmins .....	773
Cochrane .....	1,745
Total .....	13,977

The motive power has been generally assigned during the year as follows:—

Class of Service.	Number of Engines.
Passenger .....	15
Freight .....	28
Work .....	2
Switching .....	4

*Locomotive Mileage:*

The following statement shows mileage made by locomotives belonging to this railway during the year:—

Engine No.	Miles Run.
101.....	24,762
103.....	28,294
104.....	8,184
105.....	24,643
106.....	22,751

*Repairs to Passenger Equipment:*

Extensive repairs have been made to passenger equipment at North Bay Junction shops as follows:—

Class of Car.	General Repair.	Light Repair.
First Class .....	1	8
Second Class .....	1	10
Baggage and Express .....	..	3
Mail and Express .....	1	3
Parlor Cafe Cars .....	1	1

NOTE.—The Term "General Repair" as applied above refers to cases where a coach has had the interior and exterior finish of car removed, framing refitted, and trucks rebuilt.

T. & N. O. Railway Houses, Iroquois Falls, Ontario.

The term "Light Repair" applies to coaches having seat arms scraped and sanded, interior of car varnished, outside of car washed down and given two coats of varnish; trucks repaired.

Each first and second class coach given a general repair has been equipped with steel side sills, extra wooden sills, new friction buffers and draft gear, vestibule curtains and tail gates. The mail and express cars have been equipped with steel sills, new friction buffers and draft gear.

Parlor cafe car "Wasaksima" is now in the shop undergoing general repairs, and is being equipped with electric lighting system of the Safety Car Heating and Lighting Company's make with Edison storage batteries.

In addition to the above the official car "The Whitney" has been given a general repair and equipped with Commonwealth Company's cast steel six-wheel trucks, thus making all six-wheel passenger car trucks in use on this railway of one standard type.

### *Coach Cleaning:*

Statement showing the number of coaches cleaned at the different stations during the year:—

Station.	Number of Coaches Cleaned.
North Bay Junction .....	2,878
Elk Lake .....	628
Englehart .....	1,198
Timmins .....	1,441
Iroquois Falls .....	628
Cochrane .....	2,493
Total .....	9,266

### *Repairs to Conductor's Vans:*

During the past year fourteen of our conductor's vans have been through the shop for general overhauling and repairs.

### *Repairs to Freight and Work Equipment:*

The staff maintained on freight car repair work in Carpenter Shop at North Bay Junction has rebuilt 17 flat cars, made heavy repairs such as new sills, new decking, trucks overhauled, and etc., to 34 flat cars, 5 box cars, and one stock car. On the repair track 28 flat cars have had new sills applied and 15 cars have been redecked. In addition to this, 814 T. & N. O. freight cars, 2,717 coaches and 18,678 foreign cars have been repaired and released from repair track at North Bay Junction.

Bills have been rendered against foreign roads for repairs to cars under rules adopted by the Master Car Builders' Association. Monthly bills have also been rendered against the Grand Trunk Railway for repairs to cars under terms and conditions of Grand Trunk Running Rights Agreement.

All work equipment such as snow ploughs, snow flangers, wrecking outfits, steam shovels, and boarding cars, etc., have been overhauled and given such repairs as were required to keep them in serviceable condition.

At different times during the year our wrecking outfit has been loaned to outside companies for which proper bill has been rendered in each instance.

*Steel Tyres Turned and Wheels Applied Rolling Stock:*

During the year forty-four pairs of driving wheels, one pair of trailing truck wheels, eighty-one pairs of coach wheels, forty-three pairs of tender wheels, thirty-one pairs of engine truck wheels, and sixteen pairs of street car wheels have been turned at North Bay Junction.

The following new tyres were applied to wheels: Thirty-four driving wheel tyres, twenty engine truck tyres, eight tyres for street car wheels.

One thousand four hundred and seventy-eight cast iron wheels have been pressed off axles, new wheels bored and mounted on these axles.

Sixty-nine pairs of wheels have been changed under passenger equipment and bad tyres turned.

New wheels have been applied to T. & N. O. freight and work equipment as follows:—

- 14 pairs new 33" C.I. wheels on  $3\frac{3}{4}$  x 7" axles.
- 1,242 pairs new 33" C.I. wheels on  $4\frac{1}{4}$  x 8" axles.
- 636 pairs new 33" C.I. wheels on 5 x 9" axles.
- 255 pairs new 33" C.I. wheels on  $5\frac{1}{2}$  x 10" axles.

*Rolling Stock Destroyed:*

We are glad to report that there have been no serious wrecks and little heavy damage to rolling stock on our line during the past year. T. & N. O. coach No. 112 was destroyed by fire at Englehart, January 14th, 1917; C. & N. W. 114746 by wreck at M.P. 1531½, February 7th, 1917; D. P. & I 5154 by wreck at M.P. 222, February 25th, 1917; B. & S. 11346 by wreck at South Gillies, August 3rd, 1917.

In each case of foreign cars destroyed we have settled with owners for depreciated value of cars in accordance with Master Car Builders' regulations.

Seven of our flat cars and two steel underframe box cars have been destroyed on foreign lines and bills have been rendered against such companies covering depreciated value of cars, less value of serviceable parts returned, as per Master Car Builders' rules.

*Work Turned Out of Carpenter Shop:*

In addition to the regular work in connection with repairs to passenger, freight and work equipment, considerable miscellaneous work has been done in the carpenter shop for other departments, such as dressing lumber, making window framing and stair banisters, conductor's kit boxes, ladders, tool chest, notice frames, gang planks, transfer cases, standard explosive blocking, spot boards, hand sleighs, snow scrapers, flanger markers, station sign boards, bulletin boards, time table racks, barrel skids, repairs to office chairs, desks, cabinets, and platform trucks.

*Equipment Owned:*

- |   |   |
|---|---|
| 45 road locomotives.                                | 1 combination wooden first-class and baggage car. |
| 4 switching locomotives.                            | 1 exhibition car.                                 |
| 2 private cars.                                     | 3 parlor cafe cars.                               |

Farm of A. W. Skinner, Englehart, Ontario, 1917.

## OFFICE OF THE SUPERINTENDENT OF TRAFFIC.

## Annual Report, Year ended October 31st, 1917.

During the fiscal year ended October 31st, 1917, the following accidents and derailments occurred, and glad to report we have been free of accidents of a serious nature:

## 1916.

November 8th, while Ex. No. 123, south, passing M.P. 178½, cars G.N. 50343, and G.T. 46639 derailed. Cause of derailment, broken axle on Great Northern car 50343. Total damage to equipment, \$210.00. Damage to track material, labor, repairing and wrecking, \$59.00.

November 15th, while train No. 47, north, passing M.P. 136¾, alleged struck and killed calf on public road crossing. Owner, Harry Kerr, Heaslip.

November 17th, while train No. 81, approaching M.P. 70.77 (main line), alleged struck and killed man named Edward Osborne, who was walking on track. Railway exonerated from all liability by coroner's verdict.

November 24th, while Train Baggage-man McQuestion straightening baggage in car at Porquis Junction, large commercial trunk alleged fell on right foot, alleged causing contusion of big toe. Resumed duty December 13th.

December 1st, while Extra No. 142, south, passing M.P. 100, alleged struck hand car, alleged fatally injuring Sectionman James Irvine Astels.

December 9th, while brakeman H. W. Wagner, handling way-freight at Wawbewawa, barrel of oil fell and alleged struck left knee, alleged causing same to be bruised. Resumed duty December 18th.

December 9th, while freight trucker Anthony Tremblay, North Bay, trucking heavy steel plate, same alleged slipped causing truck handle to strike him on left side of chest, breaking a rib. Resumed duty December 26th.

December 19th, while fireman Chas. Dominic Romain shaking grates on engine No. 141, at Redwater, shaker bar slipped off shaker, arm alleged coming in contact with considerable force with feed valve on boiler; party alleged receiving injuries to three fingers on right hand. Resumed duty January 25th, 1917.

## 1917.

January 10th, Mr. James Thompson, manager Monteith Pulp and Timber Co., alleged struck by Train No. 9 (The National) at Homer, alleged sustaining injuries to left hand. No responsibility with railway.

January 17th, while engineer H. Thomas was getting down on turn-table after oiling engine, foot alleged slipped on ice, throwing him backwards into turn-table pit, alleged causing muscles and ligaments in back and neck to be badly strained. Resumed duty April 2nd.

February 3rd, while brakeman R. T. Connell was bringing engine No. 103 from round house at Englehart, to place on train on track No. 4, riding pilot of engine, alleged struck brake beam in centre of track, which had fallen from freight car, alleged injuring all toes on left foot, necessitating amputation, also slight bruise on right hip. Resumed duty June 5th.

February 7th, while Extra No. 144, south, passing four rails south of Boston Creek trestle, cars G.T.P. 308400 derailed, also derailing following cars: T. & N. O. 60023, 60172; N.W. 20570, C.N.W. 138676, I.C. 46129, C.N.W. 114746, P.R.R.

162659, C.P. 34300, C.C. & St.L. 69249, C.N.W. 104739, G.T.P. 309766, C.P. 71026, P.R.R. 196921. Cause, broken rail. Total damage to equipment, \$525.00.

February 16th, while yardman William Lionel Tracey coupling yard engine No. 150 to first-class coach No. 232 in North Bay Junction yard, was alleged crushed in abdomen, due to drawbar on engine slipping past coupling. Resumed duty March 12th.

February 25th, while No. 97, engine No. 144, north, passing one pole and a half north M.P. 222, car D.T. & I. 51544, alleged derailed. Cause, broken truck on derailed car.

March 13th, A. J. Jackson, passenger, alleged fell into excavation in front of station, Porquis Junction, alleged injuring hip.

March 19th, while Train No. 51, passing two poles east of South Porcupine station, alleged struck and killed pig. Owner, John Hurly, South Porcupine.

March 21st, while brakeman Geo. Fleury unloading way-freight from G.T. 11605 at Haileybury, alleged stepped on nail protruding from piece of board, nail alleged penetrating foot. Resumed duty April 2nd.

March 31st, Bert Coughlin, age 14, alleged killed, Ramore, while attempting to jump off train No. 1 while in motion. Railway exonerated from all liability by Coroner's verdict.

April 1st, while Extra No. 145, north, passing M.P. 7.7, G.T. 59101 alleged derailed, also derailling following cars: G.T. 59127, B. & S. 1546 and 10249, C.P. 270182. Estimate damage to equipment \$100.00. Damage to track material, labor, \$64.92. Cause, account portion of brake shoe falling between switch joint and rail, becoming wedged in, spreading switch point slightly.

April 8th, while Train No. 85, passing M.P. 95 $\frac{3}{4}$ , I.O.X. tank car No. 1293 derailed. Estimate damage to equipment, \$50.00. Estimate damage to track material and labor repairing, \$110.04. Cause, broken journal.

April 9th, while Engine Extra No. 101, west, approaching Leeville, pony trucks alleged derailed, causing engine to run into west end of Leeville siding, damaging front end of engine, breaking draw bars T. & N. O. 60317 and 60563. Cause, account snow and ice. Approximate damage to equipment, \$100.00.

April 9th, while operator H. R. Switzer, Latchford, on his way to resume duty, alleged slipped on ice, falling, tearing cords at elbow of right arm. Resumed duty April 23rd.

April 14th, while Extra No. 143, south, passing between Wye switches north end New Liskeard yard, B. & M. 48708 derailed. Estimate damage to track material and labor, \$45.20. Estimate damage to car, \$60.00. Cause, broken journal.

April 22nd, while switching North Bay Junction yard, engine No. 153, while pushing cars up through No. 20 for rip track, side swiped G. T. 18752, with C.P. 142450. Estimate of damage to equipment, \$65.00. Responsible employees disciplined.

April 23rd, while Frank LaFlamme, freight trucker, trucking, North Bay, truck roll of wire, weight of same alleged shifted canting truck, alleged jamming left hand and tearing middle finger. Resumed duty April 30th.

May 12th, while Extra No. 141, south, passing M.P. 196, alleged derailed cars C.G.R. 250632, 260248; I.C. 62105 and 60265. Estimate damage to track material and labor, \$108.78. Estimate damage to equipment, \$675.00. Cause, unknown.

May 21st, while Train No. 1, passing M.P. 128, alleged struck and killed mare. Owner, Wm. Pollock & Son, Englehart.

May 30th, while trucker Sam Marantjis, Cobalt, loading freight from wagon into freight car, teamster was throwing four rolls of roofing from wagon into car, one of them alleged pitched onto Marantjis, alleged spraining foot. Resumed duty June 13th.

June 22nd, while brakeman Nathan Pringle walking across top of cars, Train No. 97, at Dane, alleged fell from top of coal car while same in motion, alleged dislocating shoulder and injuring tissue. Resumed duty July 30th.

June 23rd, while Train No. 9 (The National), passing six poles south M.P. 206, alleged struck and killed one-year-old steer. Owner, Geo. Burton, Matheson.

June 23rd, while Extra No. 146, south, passing north switch of crossover, Latchford, alleged derailed I.R.C. 62313. Cause, sharp flange on wheel. Estimate damage to track material and labor, \$57.67.

June 26th, while fireman Chas. Empie shaking grates on engine, Porquis Junction, foot alleged slipped causing him to fall, alleged striking side on door stand, fracturing rib on left side. Resumed duty July 30th.

June 30th, while Extra No. 144, north, passing M.P. 227, alleged struck Arthur Smith, lying on track in alleged intoxicated condition. Alleged injuries consisted of broken arm and bruised hip. Railway exonerated from all liability.

July 28th, while Train No. 81, passing Kenney, alleged struck and killed three pigs. Owner, Mr. Grier, Kenney.

July 30th, while Stephen Powers, employee of the Baldwin Mining Co., assisting in unloading car T. & N. O. 60059, lumber, at M.P. 167 $\frac{1}{4}$ , stake alleged gave way, lumber falling on him, causing fatal injury. No responsibility with the railway.

August 3rd, while No. 83, approaching north switch, South Gillies, car B. & S. 11346 derailed, also derauling S.S.W. 20152, C.C. & St.L. 6754, Ill. Cent. 47160, Penn. 580788, P.M. 42849, B. & S. 11492 and 11486. Cause, breaking of intermediate arch-bar, west side leading truck B. & S. 11346. Estimate damage to equipment, \$1,375.00. Estimate damage to track, material and labor, \$575.00.

August 10th, while Train No. 9 (The National), passing through Matheson, alleged struck cow, breaking hind leg. Owner, Frank L. Roberts, Matheson.

August 12th, while Extra No. 141, passing two poles north of watertank, Matheson, alleged struck and killed horse. Owner, Walter Monohan, Matheson.

August 21st, while Extra No. 132, south, passing over north switch, Temagami, pony truck wheels on engine No. 132 mounted on switch point, alleged derauling engine and leading truck of tender. Cause, due to switch point being worn and chipped. Estimate damage to engine, \$230.00. Estimate damage to track, material and labor, \$101.90.

August 26th, while Train No. 9 (The National), passing through Matheson, alleged struck and killed cow. Owner, D. C. Johnson, Matheson.

September 2nd, while No. 10 (The National), passing ten poles south M.P. 246, alleged derailed G.T.P. refr. 6027. Cause, unknown. Estimate damage to track, \$150.00.

September 8th, while Train No. 34, passing M.P. 11 $\frac{1}{2}$ , Iroquois Falls Branch, alleged struck horse, breaking hind leg. Owner, Mr. Beatty, Porquis Junction.

Sept. 17th, while Extra No. 142, north, passing through Otter, alleged struck and killed pig. Owner J. Dubois, Otter.

September 17th, while brakeman A. Irvine, getting down from engine, alleged sprained ankle. Resumed duty October 1st.

Public School, Haileybury, Ontario, 1917.

High School, Haileybury, Ontario, 1917.

October 6th, two cows alleged struck and injured, five poles north M.P. 71. Owner, Mr. J. Derosier, Temagami. Train unknown.

October 11th, while Extra No. 115, east, passing M.P. 32 $\frac{3}{4}$ , Porcupine Branch, alleged struck and killed cow. Owner, Joe. Sheridan, Timmins.

October 9th, while Train No. 23, passing M.P. 53 $\frac{3}{4}$ , Charlton Branch, alleged struck and killed steer. Owner, Mr. Thomas Brennan, Charlton.

October 18th, Mr. C. A. Trudell, passenger, No. 1, en route to Matheson, alleged fell off train M.P. 181 $\frac{1}{4}$ , alleged injuring back. Commission exonerated from all responsibility.

October 20th, while Extra No. 143, south, passing M.P. 2, alleged struck and killed horse. Owner, Wm. Milne & Sons, Trout Mills.

October 20th, while Extra No. 130, west, passing M.P. 81 $\frac{1}{2}$ , Porcupine Branch, alleged struck and killed cow and calf. Owner, Geo. Vallier, Connaught.

October 27th, while train No. 47, passing road crossing M.P. 106 $\frac{1}{4}$ , alleged struck horse and rig, alleged killing horse. Owner, Mrs. J. P. Jean, North Cobalt.

October 31st, while Extra No. 141, west, passing crossing west of Schumacher Station, alleged struck wagon, damaging same beyond repair. Also alleged slightly injuring Andre Roy of Timmins, who was in charge of team.

During period under consideration a few employees received minor injuries while in Commission's employ, but none of a serious nature, and same are contained in reports of District Physicians herein.

#### TIME-TABLE CHANGES.

Necessary time-table changes have been made to meet summer and winter traffic requirements:

Time-table No. 35, effective February 11th, 1917. Time-table No. 36, effective March 4th, 1917. Time-table No. 37, effective June 24th, 1917. Time-table No. 38, effective September 30th, 1917. Current Time-table shows Trains Nos. 1 and 2, daily except Sunday, between North Bay and Cochrane. These trains are equipped with Standard C.P.R. sleeper, and inter-line service via Canadian Pacific Railway to Montreal, Que. Trains Nos. 46 and 47, daily, except Sunday, between North Bay and Englehart, with inter-line service, via Grand Trunk Railway to Toronto. Trains Nos. 9 and 10 (National), tri-weekly, between North Bay and Cochrane, with inter-line service, via Grand Trunk Railway to Toronto, and Canadian Government Railways to Winnipeg, Man. Equipment of these trains consists of colonist and sleeping cars, electric-lighted first-class coaches, tourist sleeping cars, dining cars, and Standard sleeping cars. Trains Nos. 50, 51, 54 and 55, daily, except Sunday, between Timmins and Porquis Junction, connecting with main line trains. Trains Nos. 52 and 50, daily, except Sunday, between Timmins and South Porcupine. Trains Nos. 56 and 57, Wednesdays and Fridays, only, making connections at Porquis Junction with No. 9, "The National." Trains Nos. 30, 31, 32 and 33, daily, except Sunday, and Trains Nos. 34 and 35, Wednesdays and Fridays, only, between Iroquois Falls and Porquis Junction, connecting with main line trains. Trains Nos. 60 and 61, daily, except Sunday, and Nos. 62 and 63, Wednesdays, only, between Elk Lake and Earlton Junction, connecting with main line trains. Train No. 4, daily, except Saturday and Sunday, between Englehart and Cobalt, and Train No. 6, Saturday, only, Englehart to Cobalt. Trains Nos. 23, 24, 25 and 26, daily, except Sunday between Englehart and Charlton, connecting with main line trains.

Herewith reports Dr. A. McMurchy, District Surgeon, North Bay; Dr. J. S. McCullough, New Liskeard; Dr. R. C. Lowrey, Englehart; Dr. Geo. Cooper, Elk Lake; Dr. H. H. Moore, Timmins, and Dr. J. W. Fraser, Cochrane.

REPORT OF DR. A. McMURCHY.

I am pleased to have to report that, during the year ending October 31st, 1917, there has been a remarkable freedom from accidental injuries among the employees. There have been only two cases causing prolonged loss of time—one, a machinist, severely scalded over the thigh—still under treatment and progressing favorably. The other was a section foreman, who was severely burned on the leg—made good recovery. There were a number of minor accident cases, causing loss of time to the workmen for short periods.

REPORT OF DR. J. S. McCULLOUGH.

I beg to submit herewith annual report for this district for the year ending October 31st, 1917:—

*Medical Cases.*—During the year there were 208 office consultations with medicine, and 192 town and hospital visits. Medical cases treated were all of a minor nature. There were 15 visits out of town.

*Surgical Cases.*—Included under this head were two cases of a serious nature—one with a compound fracture of the femur and a fractured skull; died one hour after admission to hospital. The other, a case of amputation of all toes of the left foot, made a good recovery with a useful foot. The other cases were of a minor nature, including fractured fingers and toes, sepsis cuts and bruises, with good recovery.

REPORT OF DR. R. C. LOWREY.

I present to you herewith annual medical report for this district:—

*Surgical Cases:*

Crushed foot .....	2
Frozen foot .....	1
Fractured ankle .....	1
Lacerated leg .....	1
Burns .....	1

There were also a number of minor injuries, such as slight cuts, bruises and sprains.

*Medical Cases:*

Rheumatic fever .....	1
Pneumonia .....	1
Bright's disease .....	1

Besides above, a large number were treated for tonsilitis, bronchitis, muscular rheumatism, dyspepsia and other minor ailments.

Public School, Cobalt, Ontario, 1917.

Public School, New Liskeard, Ontario, 1917.

REPORT OF DR. GEO. COOPER.

Since July 1st have treated as follows:—

Broken arm .....	1
Scalp wounds .....	2
Pneumonia .....	2
Bronchitis .....	15
Tonsillitis .....	5
Measles .....	15
Whooping cough .....	28
Intestinal ailments .....	32

REPORT OF DR. H. H. MOORE.

I beg to report for the year ending October 31st, 1917, the following cases of accidents and sickness among the employees of the T. & N. O. Railway on that part of the line between Timmins and Iroquois Falls:—

Nature of Illness.	Accident.	Sickness.
Frost bites .....	1	..
Cuts .....	2	..
Bruises .....	3	..
Hernia .....	1	..
Sprains .....	5	..
Scald .....	1	..
Colds .....	..	53
Bronchitis .....	..	6
Grippe .....	..	10
Whooping cough .....	..	7
Eczema .....	..	1
Debility .....	..	4
Bright's disease .....	..	1
Gastro-intestinal .....	..	12
Tonsillitis .....	..	4
Neuralgia .....	..	4
Conjunctivitis .....	..	1
Intestinal worms .....	..	1
Constipation .....	..	2
Appendicitis .....	..	1
Stomatitis .....	..	1
Earache .....	..	1
Infected lip .....	..	1
Quinsy .....	..	1
Broncho-pneumonia .....	..	1
Migraine .....	..	1
Myalgia .....	..	2
Diarrhœa .....	..	5
Carbuncle .....	..	13
Hæmorrhoids .....	..	1
Pelvic inflammation .....	..	2
Urticaria .....	..	1
Hiccough .....	..	1

REPORT OF DR. J. W. FRASER.

I beg leave to submit the following report for year ending October 31st, 1917:

Fractured humerus .....	1
Fractured clavicle .....	1
Crushed foot .....	2
Abscesses .....	6
Injuries to hand .....	3
Rheumatism .....	2
Pneumonia .....	2

There were also innumerable cases of influenza, bronchitis, gastritis, as well as other minor medical and surgical conditions.

Account traffic conditions, effective June 19th, 1917, Porcupine Station closed. On June 20th, 1917, Connaught Station was opened as an agency point.

Respectfully submitted,

W. A. GRIFFIN,

*Supt. of Traffic.*

Reaping Oats, 80 bushels to acre, on farm of Mr. J. R. Philips, Milberta, Ontario, September, 1917.

## ANNUAL REPORT TELEGRAPH AND TELEPHONE DEPARTMENT.

During the fiscal year ending October 31st, 1917, both telegraph and telephone business held up exceedingly well.

A local telephone circuit was strung from Mileage 37.7 to Mileage 45.5 during the latter part of 1916, to give the different lumber camps connection with Diver, at which point a switching office and pay station was installed. Telegraph office was installed at Diver for the winter months while shipments of logs were being made from that point.

On May 1st, 1917, telegraph wire leased to Messrs. Kiely, Smith & Amos, brokers, was discontinued, Cobalt to Timmins, and new agreement entered into with that firm for circuit, North Bay to Cobalt.

During the year thirty-nine subscriber's telephones were installed and ten removed. Public telephone offices were opened at Wawbewawa, for benefit of the settlers and at Doherty for the Port Arthur Construction Co. Telegraph office at Porcupine was closed and instruments transferred to Connaught, which was made a railway and commercial telegraph agency.

General repairs were made over entire system and lines maintained in first-class condition.

Regret to report that on June 1st our telephone inspector, Mr. L. M. Ferguson, was electrocuted and instantly killed at Boston Creek, by coming in contact with a high power transmission line at that point.

The only serious interruption of service occurring during the year was on March 27th, 1917, when all telegraph and telephone communication north of Englehart was cut off by heavy sleet storm. Prompt action was taken and temporary repairs made, restoring normal connections. Permanent repairs were made later in the summer and the pole lead in Englehart yard was entirely rebuilt.

The following is a statement of commercial telegraph and telephone business handled:—

Local messages handled .....	39,446
Conjoint messages handled .....	83,605
<b>Total .....</b>	<b>123,051</b>
 Cable messages sent .....	 419
Cable messages received .....	129
<b>Total .....</b>	<b>548</b>
 Cable words sent .....	 7,486
Cable words received .....	2,102
<b>Total .....</b>	<b>9,588</b>
 Telephone calls handled .....	 58,839

Below is a summary of telegraph and telephone wire in operation October 31st:

Kind.	Gauge.	Use.	Mileage.
Iron .....	No. 8 B.W.G. ..	Telegraph .....	1,670
Iron .....	No. 12 B.W.G. ..	Long Distance Telephone .....	167
Iron .....	No. 12 B.W.G. ..	Local Exchange and Party Line.....	247
Copper .....	No. 9 B. & S....	Telephone Train Despatching.....	574
Copper .....	No. 10 B. & S....	Long Distance Telephone .....	646
Copper .....	No. 12 B. & S....	Long Distance Telephone .....	228
Style B. ....	Twisted pair....	Local Exchange .....	41,000 ft.
Total Wire Mileage .....			3,532
Total Pole Mileage .....			341

All of which is respectfully submitted.

W. J. KELLY,

*Supt. of Telegraph and Telephone.*

## GENERAL FREIGHT AND PASSENGER DEPARTMENT.

## Annual Report, Year ended October 31st, 1917.

The traffic handled during the fiscal year ended October 31st, 1917, shows the following comparison as to tonnage and revenue with that handled during 1916:—

Tonnage, 1917 .....	960,714	Revenue .....	\$1,459,459 93
Tonnage, 1916 .....	922,618	Revenue .....	1,320,569 33
Increase .....	38,096	Increase .....	\$138,890 60

There was a large decrease in the movement of all rail grain during the winter of 1916 and 1917 as compared with the previous winter, due entirely to the shortage of empty cars, but this decrease was more than offset by a large increase in the movement of dressed meats and packing house products and manufactured goods.

This increase is largely due to the increasing popularity of the "Transcontinental Route" in the movement of all kinds of traffic between the east and the west.

There was also a large increase of tonnage in coal due to increased activities in the mines, also, to the requirements of the paper and pulp mills at Iroquois Falls and at Metagami on the C.G. Rly.

Lumber, pulpwood and other forest products also show a large increase over shipments for the previous year.

The shortage of cars has seriously hindered the movement of freight, but it is hoped that the Canadian Railway Association for National Defence, recently organized, will be able to take such action as will relieve this situation.

Passenger traffic handled for the fiscal year ended October 31st, 1917, as compared with the year previous, shows the following result:—

Passengers carried, 1917 .....	499,759	Revenue .....	\$655,127 58
Passengers carried, 1916 .....	485,759	Revenue .....	624,808 12
Increase .....	14,000	Increase .....	\$30,319 46

While local passenger traffic has been keeping up well, this increase is largely due to through traffic handled on the "National" trains Nos. 9 and 10, between Toronto and Winnipeg. This service continues in popular favor and it is hoped results will soon warrant the running of these trains daily instead of tri-weekly as they are at present.

A. J. PARR,

*General Freight and Passenger Agent.*

Threshing Alsike, 100 bushels, on farm of Mr. Roy Pacey, two miles from Milberta, Ontario.

## OFFICE OF THE COMMISSIONER.

Annual Report for Year ended October 31st, 1917.

GEO. W. LEE, COMMISSIONER.

The financial year of the Temiskaming and Northern Ontario Railway—November 1st, 1916, to October 31st, 1917—has, in every respect, been a very successful year. The territory served by us has, also, been very prosperous—grain and vegetable crops have been good and the cut of timber from the forests large.

An increased acreage of grains and vegetables has been sown and has resulted in a good average crop of everything planted. There has been a very heavy crop of hay, good crop of oats, fair crop of spring wheat and nearly the average (for this district) of peas. The crop of peas has been much better than grown elsewhere in Ontario. The potatoes and other vegetables are excellent. The crop of vegetables is very largely in excess of that formerly grown in the district, owing to the very general effort of our people to increase production. Many of our settlers and citizens have had a vegetable garden this year for the first time—perhaps in their lives—and their success in gardening has been remarkable. We had the ploughing done for our employees who were unable to have it done themselves and our endeavours have met with great success.

Forests.—The largest cut of pulpwood in our history has and is being made, and this is to the advantage of the settler more than ever. The demand has been without limit and the prices up to more than double that of any former year, with the result that the largest amount of wood, in any one year, will come out this year. This wood will go to the many pulp and paper mills in Canada and the United States. Many of those mills have representatives residing in the district and they are financing the operations of cutting, loading and hauling the wood from the tree to the track. This permits the poorest of our settlers enjoying all the advantages accruing from the bush on their farms as fully as those who are financially better off. In many cases the middleman has gone and we hope for good. It is greatly to the settlers' advantage to deal direct with the company's agent.

There are many rossing plants in the district that are being operated the year round, furnishing work to the capacity of hands that may be had to prosecute the work. The output from individual rossing plants will run into thousands of cords each and the total from the combined plants into the hundreds of thousands of cords of pulpwood.

In addition to the above we have the large paper mills at Iroquois Falls and those in the course of construction at Smooth Rock Falls (the latter are nearly completed) in which several hundred thousands of cords of wood are being converted into paper yearly. The paper manufactured and made ready for the newsprint is being used in all the great dailies of Canada and United States. The paper is of such a superior quality, owing to the superior class of timber used (and only grown in Northern Ontario) that it is steadily displacing the paper of other mills not using our wood.

The sale of Crown Lands during the year ended has not equalled the sale of former years. This is largely attributed to the war conditions—many of our young men at the front doing their bit—and the fact that wages are so high that men find remunerative employment so good that it attracts them away from the land. There have, however, been many farm properties with improvements that have changed hands, the purchasers usually being men of ample means

Pile of Potatoes grown on a town lot in North Cobalt, Ontario, 1917.

and sound judgment, and they realize the value of the Temiskaming lands; as possibly the pioneer settler who located the lands and sold, failed to realize the value. However, the prices realized were good, and mutually the exchange, no doubt, will be beneficial both to the immediate parties as well as the district.

Labor is and has been scarce. Wages are high and the people of the district were never so well off in our history. There has not been as much land put ready for cultivation during the year as we might have hoped for, but likely the cause has been the demand for pulpwood and the prices paid for it. This has had the effect of keeping the settlers cutting wood rather than clearing land. Ultimately it will work out to the advantage of the district, as with the merchantable timber harvested and out of the way greater progress will follow in years to come in clearing and cultivation.

The fire sufferers of 1916 have been, through the generosity of the Government, largely reinstated on their farms again and many in as good a position as previous to the fire. Many farms in the older sections have had erected, during the year, fine farm buildings, such as bank-barns, stables, etc. Much improved stock has been brought into the district during the year, including horses, cows, sheep, swine as well as large quantities of poultry. The grasses of the district have furnished abundant pasturage for the stock and the district has a show of grass, with winter setting in, that one will not see in any other part of Canada.

During the year there has been a creamery established at New Liskeard, which has been well patronized and very successful. It is the first of its kind in the district and there is reason to hope for the installation of others at various points in the near future.

During the year we, at the suggestion of one of our employees, looked into the question of tie preserve for the railway. A thorough investigation was made and, as a result, the Department of Lands, Forests and Mines have set aside four townships for the Temiskaming and Northern Ontario Railway. It is estimated that there are 2,500,000 ties on this property and, with proper management, which it is purposed shall be given to this project, we should have a continual supply of ties.

We are glad to note that the Government are going about it in the right way to settle returned soldiers in the country served by us. We have faith and believe it will be a success beyond all doubt and, in our judgment, we cannot have too many of our heroes in the Great Northland.

During the year we have been highly honored by a visit to our country—"Greater Ontario"—by Their Excellencies, The Duke and Duchess of Devonshire and family. Feel that this visit will be something we will all remember and look back upon as one of the pleasant remembrances in connection with the development and progress of the Greatest Country on earth.

In conclusion we have the faith in the country and this, combined with works, a glorious future is assured and success will come to all.

---

View of part of Town of Cobalt, Ontario, 1917.

## Preliminary Report on the Mining Industry in that part of Northern Ontario served by the Temiskaming and Northern Ontario Railway, Calendar year 1917

By ARTHUR A. COLE, Mining Engineer

The mining industry in the Temiskaming District has had a fairly prosperous year. While gold and silver, the two principal metals produced, will each show a reduction in the actual ounces produced, the increased value of silver will more than offset the difference and the gross value of the output of these metals will be \$25,000,000, an increase of \$2,000,000 over the previous year.

In order to meet the increased cost of living, wages have been increased in both the gold and silver camps, in the gold camp by a raise in the basic wage and in the silver camp by a bonus which varies according to the price of silver.

Last year many of the mines ran very short of fuel during the coal famine, but this winter, profiting by last year's experience, a good supply has been stored ahead.

In both the gold and silver areas new finds continue to be made and, wherever promising, capital is readily forthcoming for their development.

### GOLD.

The statistics of Ontario's gold production for the first nine months of the calendar year, issued by the Ontario Bureau of Mines, are as follows, with figures for the corresponding period of 1916 for comparison:—

	Quantity, ounces.	Value.
1916 .....	363,955	\$7,513,734
1917 .....	343,490	6,754,535

### Porcupine:

The gold production of the Porcupine camp for 1917 will amount to approximately \$9,000,000, and comes from the following mines:—

Hollinger.	Vipond-North-Thompson.
McIntyre.	Schumacher.
Dome.	Dome Lake.
Porcupine Crown.	Newray.

With the continued high cost of supplies and the increase in the cost of labor, the cost of producing gold has materially increased. This particularly affected the Dome mine, so that towards the end of the year the directorate of this property decided to close the mine until working conditions were more favorable. Now the mill is closed down and the only work that is being carried on is the sinking of a shaft to the 1,500 ft. level by contract.

The favorable deep developments in the McIntyre and Hollinger Mines, as well as the information gained by diamond drill cores at a depth of 1,400 feet tend to show that the ore at depth is of the same character as higher up, and all these indications point to the probability of deep mining at Porcupine.

Outside of the producing mines there have been important working extensions of the camp both north and south. The Ankerite property in Northern Deloro,

belonging to the Coniagas Mines, of Cobalt, has started sinking of a 500 ft. shaft on contract. The Maidens-Macdonald, an adjoining property, has also been bought by the same interests.

Control in the Newray, formerly the Ray property, situated to the north-east of the Pearl Lake group, has been acquired by Crown Reserve and Dominion Reduction interests of Cobalt. This was one of the early discoveries of the Porcupine camp, but owing to mismanagement and lack of sufficient capital, the property was never given a thorough testing out. Recent developments indicate that it is likely to become an important producer in the future. A number of claims in Northern Tisdale are also being opened up and will be given further prospecting development. Other prospecting in the outlying parts of the camp has not yet developed important results.

#### *Kirkland Lake:*

This district has been very active during the year, and many new properties have been opened up, extending the probable producing area very materially. The new development has been mostly to the west and south-west of Kirkland Lake. The following is a list of the most active properties at the close of the year, running roughly from west to east:—

Canadian Kirkland.

United Kirkland.

Elliott Kirkland.

Kirkland Lake Gold Mines (Beaver or McCane).

Kirkland Porphyry.

Teck-Hughes.

Lake Shore.

Minniker Gold Mines.

Wright-Hargraves.

Aladdin Cobalt (Burnside).

Tough-Oakes.

Fisher Gold Mining & Milling Company, on the Goodfish Lake road.

Hind Claims.

The only two producers were the Tough-Oakes and the Teck-Hughes. The Teck-Hughes mill has been doubled in capacity, so that it now treats 80 tons per day. The main shaft is being sunk to the 700 ft. level. The Lake Shore has developed an ore shoot containing some spectacular ore on the 2nd level under Kirkland Lake, and a crosscut is now being driven to cut this ore on the 400 ft. level. The Lake Shore mill, with a capacity of 75 tons per day, is expected to be ready to start operations by February 15th, 1918.

The Kirkland Lake Gold Mines are sinking a central shaft to the 700 ft. level. The foundation for their mill is now complete and the mill is expected to be ready by next June.

The Kirkland Lake Porphyry Company also plan a mill for 1918.

Favorable deep developments on the operating properties, particularly on the Kirkland Lake, Teck-Hughes and Lake Shore properties, are of a most encouraging nature and indicate that further extensions to the producing zone are likely to be found extending to the west and south-west of the present operators around Kirkland Lake.

#### *Munroe:*

After the devastating fire of the summer of 1916, the Croesus Mine replaced its plant and rebuilt its mill. The mill was ready for operation in the spring of 1917, but owing to water troubles in the mine the mill has not been operated

continuously. The mill has a thirty to forty ton daily capacity, but the company still ships high-grade hand sorted ore.

A small plant is being taken into a group of claims one mile south-east of the Croesus, where a company (Buff Munroe) already has a shaft down fifty feet.

#### *Boston Creek:*

The Boston Creek and R.A.P. Syndicate, near Boston Creek station, has been idle during the year on account of litigation.

The Miller Independence produced a little gold and the Patricia Syndicate started development and already has a shaft down eighty feet.

#### *McElroy:*

The Kerr Lake Mining Company has an option on the Mondeau Claims and is taking in a small development plant.

#### *Skead Township:*

Several properties are doing development work and one small plant has been installed.

#### *Bourkes:*

The Bourkes Mines, Limited, situated near Bourkes station, in the Township of Benoit, have installed a small plant and have disclosed some spectacular ore in development.

The Murray-Mowgridge, on the shore of Wolfe Lake, east of Bourkes station, is now developing with a small plant. Their shaft is down 226 feet and development is proceeding on the 50, 100 and 200 ft. levels.

#### *Rickard Township:*

The original find in this Township has been acquired by the Mining Corporation of Canada. Camps are now being erected and shaft sinking has been started by hand. A plant for this property is now at Iroquois Falls.

#### *Lightning River:*

The Lightning River district is reached either from Ramore Station or by a thirty mile bush road from Kirkland Lake. A very promising find is said to occur in a quartz vein, varying in width from one to five feet.

#### *Larder Lake:*

A little activity has been restarted by the Associated Gold Fields, Limited, in this district.

#### *Powell Township:*

The Davidson and Otisse claims, which caused the rush into Powell Township last winter, had very little work done on them during the year. Supplies are now going in for next summer's work.

High Grade Ore at Cobalt, Ontario ; \$20,000 in these blocks.

"The Golden Sidewalk," Big Dome Mine, in Porcupine District.

## SILVER.

*Cobalt Camp:*

The official returns for nine months' production of the year, with the figures for the corresponding period of the previous year, are as follows:—

	Quantity, ounces.	Value.
1916 .....	16,203,091	\$9,750,040
1917 .....	15,236,002	12,001,875

Shipments for the last three months of the year averaged about the same as the first nine months of the year, which would make the value of the year's shipments \$16,000,000. For the first seven months of the year the price averaged about 75c. Then a rise started which reached its maximum on September 25th, the price on that day being 108.50c. The average price for September was 100.74c., but since that time it has averaged near 85c. This high price of silver has stimulated the Cobalt mines to further development, and much ore that was formerly too low grade can now be treated at a profit. The rise in price, in conjunction with the installation of the flotation process, is also responsible for the preparation to re-treat much of the old mill tailing material.

An agitation was started in Cobalt in connection with the flotation process, in order to have the Government take action in settling a reasonable royalty payable by the mines for the use of any oil flotation process. On account of the heavy litigation that had taken place in the United States in this connection, mining companies were often averse to installing flotation plants, fearing a repetition of this costly litigation. This was retarding production. The Dominion Government has promised to take action and see that a reasonable royalty is fixed, and as soon as this is done a further impetus will be given to production at Cobalt.

Negotiations are now under way between the British and United States Governments looking toward the fixing of the price of silver for a period of two years, and the price most frequently spoken of in this connection is 86c. The fixing of this price for a definite period of time will help to stabilize the industry, and as such will work out as a benefit to the industry in the long run.

In the early days of the Cobalt camp a small allowance was made to shippers for ore containing a cobalt content of from 6 per cent. up. Then for some time no allowance whatever was made for the cobalt contents of the ore; but, recently, the demand for metallic cobalt has increased to such an extent, particularly for the manufacture of the alloy Stellite, that the smelters began paying again for the cobalt. Still more recently the demand has become much keener, the reason being that there is a large call for arsenic as well as cobalt, and as cobalt occurs as an arsenide in the ores of the Cobalt camp, the arsenic contents rise with the cobalt and nickel contents.

At present there is a great call in Cobalt for a metallurgical process for the economical treatment of flotation concentrates, and although a considerable amount of investigation has taken place, no satisfactory method of treating this material at the point of production has yet been discovered. Shipments of this material, therefore, continue to the smelters at Denver, although a combined freight and treatment charge of over \$24.00 per ton has to be paid.

The following mines were the leading shippers during the year:—

The Mining Corporation of Canada.	The Coniagas.
The Nipissing.	The O'Brien.
The Kerr Lake.	McKinley-Darragh.

*Gowganda:*

Among the few shippers of silver ore outside of the Cobalt camp proper, the Miller-Lake-O'Brien Mine, of Gowganda, is easily the most important. This property has shipped, approximately, 1,000,000 ounces during the year. The favorable development of last year's spectacular find on this property has revived considerable interest throughout the Gowganda District.

The Reeves-Dobie property shipped five tons of high grade ore and are now preparing their small mill for operation.

The Crews-McFarlan property bagged some ore, and bought the Bartlett during the year.

The Welsh claims have been optioned to the Crown Reserve at Cobalt, and the Hyland claims to the Mining Corporation of Canada. The Morrison claims have been optioned to the La Rose Mining Company.

An investigation has also been started on the Everett Lake Syndicate.

The T. C. 177 Mining Company has a shaft down 100 ft. and is proceeding with development.

A large mineralized zone containing good silver values in parts was located in Corkill Township, about twelve miles south-west of Long Point Lake. This find, which was located on the Kell claims, is now under option to the Kerr Lake Mining Company, of Cobalt.

*Casey Township:*

Development work continued at the Casey Mine during the year.

*South Lorrain:*

Small shipments were made during the year from the Wettlaufer and Pittsburgh-Lorrain, and development work continued at the Belle Ellen.

**NICKEL.**

During the first ten months of the year the Alexo property, near Porquis Junction, on the Porcupine Branch, shipped 4,566.00 tons of nickel ore to the Mond Nickel Company, at Conniston, Ontario.

**PYRITE.**

A number of enquiries for pyrite were received during the year and some diamond drilling was done on a property at Nellie Lake, but no shipments were made.

**BARITE.**

The Barite property on Night Hawk Lake, known as the Premier Langmuir, has taken into the property a small plant and a thirty-ton mill, which is to be ready for operation the end of the year. The vein is from four to six feet wide, and carries some high grade silver ore on one wall.

**FIRE CLAY.**

Captain C. M. McCarthy, of Elk Lake, on a trip to Moose Factory, discovered what may prove to be an important deposit of fire clay on the Mettagami River.

Nipissing Mine, Cobalt.

The Silver Sidewalk at La Rose Mine, Cobalt, Ontario.

## LIMESTONE.

Shipments from the Farr Quarry, near Haileybury, continued to be made regularly during the year to the Abitibi Power and Paper Company's plant at Iroquois Falls.

## PEAT.

Owing to the recurring shortages of coal in Northern Ontario, an investigation has been started to find out if peat fuel cannot be produced in the district to substitute, in part at least, the imported coal. Samples of peat bogs were sent, during the summer, to the Mines Branch, at Ottawa, and favorable reports received. Mr. A. Anrep, peat expert for the Dominion Government, made a preliminary examination of several of these peat bogs in October, and will later report on the cost of preparing this material for market.

## RE STORES DEPARTMENT, PURCHASES AND ISSUES YEAR 1916-17

Submit herewith statement showing purchases and disbursements affecting various stocks during the fiscal year ending October 31st, 1917.

Shop stock purchases show a slight decrease as compared with 1916, but the issues show a decrease of \$83,489.63. The difference to a great extent indicates Safety First margins for use in fiscal year 1918, prominent among which are iron and steel bars, tires, and steel plates for locomotive and general repair work. The wisdom of authorizing these purchases is amply demonstrated in the ever increasing prices of such material, and difficulty of obtaining delivery, and especially since the United States have thrown in their lot with the Allies.

Shop stock material of all kinds shows sharp advances during the past year, ranging anywhere from thirty to one hundred per cent. and upwards.

Steam coal has continued to be one of our main concerns during the whole fiscal year, but by the united effort of both Toronto office and stores department, we have been able to close the year without suffering actual hardship at any time, and have, in addition, on hand a reserve that should suffice for from four to five months' consumption—present thought inclining to the latter date—say June 1st, 1918.

In this connection we were fortunate in entering 1916-17 with a favorable contract only partially delivered. Delays in coal delivery have rested mainly with transport rather than contracting companies.

During last winter anthracite coal was difficult to obtain, but in only one instance was a purchase made locally, and that for one ton. We closed the fiscal year with a larger stock on hand than we have had for some years—approximately 1,000 tons.

Purchases of oil and waste do not show much advance over 1916—one of the contributing factors being the existing contract with the Galena Signal Oil Co., which became operative May 1st, 1915, and is still in effect.

The installation of an oil and waste reclaiming process should tend to reduce car lubricating costs. Operations up to the present indicate that 100 lbs. of returned dope will yield approximately 53 pints of car oil, and 34 lbs. of wool waste. The return of old dope to stores cannot be too strongly impressed, and circulars have been issued to departments interested in this connection.

Stationery shows increase in cost in common with other lines.

Scarcity of steel rail continues, as indicated by the small amount of purchases.

which means a serious handicap, not only to the T. & N. O., but all Canadian railways. The demands for war material on the rolling mills is mainly responsible for the scarcity of rails. Heavy rail section has practically doubled in price since the beginning of the war.

Tie prices have advanced and production shows a decrease along the whole line from various causes, viz., depletion of timber supply within easy hauling distance; from forest fires; the high prices for sawn lumber, and also the abnormal price of pulpwood, diverting effort in that direction rather than to making ties.

The reservation of a tie timber area secured by the Commission for tie requirements of the railway marks the beginning of a new era, and is another example of conserving a public natural resource for use by a public utility.

Lumber of all kinds shows a large increase in price, not only in the higher grades, but even more acutely in the lower grades, such as jack and red pine and spruce.

Reclamation of material being placed under control of stores department also marks a new departure. To this end a new building was erected, also, sorting platform and scrap bins extended to facilitate sorting and caring for reclaimed material. These changes involved the transfer of a blacksmith and helper and four laborers to stores payroll.

Accounts *re* reclamation are being kept separate from others with a view to ascertaining costs in this direction. The fullest co-operation of all departments is solicited, with a view to reducing scrap and purchases to the minimum, consistent with safety—a penny saved is a penny gained.

We would characterize the work of the year as “strenuous,” not on account of the volume of business so much as the increasing difficulty in securing material and delivery to Stores, and apparently the end is still in the distance.

In closing, hereby express thanks to all departments and the Toronto office, and Commission for many courtesies extended to stores department during the year.

Respectfully submitted,

W. A. GRAHAM,

*P. A. & Storekeeper.*

Purchasing and Stores Department.

## TRAFFIC AND MILEAGE STATISTICS.

*Passenger Traffic.*

1. Total passengers carried earning revenue .....	499,759
2. Number of passengers carried one mile .....	28,616,324
3. Number of passengers carried one mile per mile of road .....	87,112
4. Average distance carried—miles .....	57.26
5. Total passenger revenue .....	\$655,127 58
6. Average amount received from each passenger .....	1 31
7. Average receipts per passenger per mile (cents) .....	.02 29
8. Total passenger train service revenue .....	750,478 22
9. Passenger service train revenue per mile of road .....	2,284 56
10. Passenger service train revenue per train mile .....	1 52

*Freight Traffic.*

11. Number of tons carried earning revenue .....	960,714
12. Number of tons carried earning revenue one mile .....	161,476,728
13. Number of tons carried earning revenue one mile per mile of road ...	491,558
14. Average distance haul of one ton—miles .....	168.08
15. Total freight revenue .....	\$1,459,459 93
16. Average amount received for each ton .....	1 52
17. Average amount received per ton per mile (cents) .....	.00 9
18. Freight revenue per mile of road .....	4,442 80
19. Freight revenue per train mile .....	2 56

*Total Traffic.*

20. Operating revenue .....	\$2,331,905 79
21. Operating revenue per mile of road .....	7,098 65
22. Operating revenue per train mile .....	2 32
23. Operating expenses .....	1,881,296 29
24. Operating expenses per mile of road .....	5,726 93
25. Operating expenses per train mile .....	1 87
26. Net operating revenue .....	450,609 50
27. Net operating revenue per mile of road .....	1,371 72

*Car Mileage.*

28. Average number of passengers carried one mile per car mile .....	10.7
29. Average number of passengers carried one mile per train mile .....	58.
30. Average number of passenger cars per train mile .....	5.41
31. Mileage of passenger cars .....	2,670,537
32. Mileage of loaded freight cars—north and east .....	5,035,666
33. Mileage of loaded freight cars—south and west .....	3,534,851
34. Mileage of empty freight cars—north and east .....	938,100
35. Mileage of empty freight cars—south and west .....	1,307,430
36. Average number of freight cars per train mile .....	19.95
37. Average number of loaded freight cars per train mile .....	15.03
38. Average number of empty freight cars per train mile .....	3 94
39. Average number of tons freight per train mile .....	283.15
40. Average number of tons freight per loaded car mile .....	18.84
41. Average mileage operated during the year .....	328.5

Train Mileage.

42. Mileage of revenue passenger trains .....	435,769
43. Mileage of revenue mixed trains .....	58,132
44. Mileage of revenue freight trains .....	512,151
45. Total revenue train mileage .....	1,006 052

TOWNSITES REPORT.

**CONTRACTS, AGREEMENTS, et. al.****RE NEWS PRIVILEGES, ETC., ON T. & N. O. TRAINS.**

Tenders called for period one, three, and five years, and contract awarded Canada Railway News Co., for five years, being lowest tender.

THIS AGREEMENT made this 9th day of November, 1916.

BETWEEN:

TEMISKAMING AND NORTHERN ONTARIO RAILWAY COMMISSION, hereinafter called the Commission,

Of the First Part,

and

THE CANADA RAILWAY NEWS COMPANY, hereinafter called the Contractor,

Of the Second Part.

WITNESSETH that the said parties have and they do hereby covenant, promise and agree, each with the other in manner following, that is to say:

1. In these presents the words "Commission" and "Contractor" shall include the parties and their respective successors and assigns. The word "Superintendent" shall mean the Superintendent of Traffic, having jurisdiction over the railway of the Commission, and the word "Secretary" shall mean the Secretary of the said Commission.

2. The Commission hereby grants to the Contractor for the period of five years, to be computed from the first day of January, 1917, the exclusive right, license and privilege (except as otherwise hereinafter provided) of selling upon the passenger trains operated by the Commission in its line of railway between North Bay and Cochrane, including branch lines, newspapers, books, periodicals and publications, nuts, fruits and confections of all kinds, cigars, stationery and fancy goods and such other articles as are usually sold on railway trains.

3. The Contractor shall in no case allow or suffer to be exhibited, sold or offered for sale or distribution on any of the trains of the Commission, any book, paper, publication or other article which may be objectionable to the Superintendent, who shall be the sole judge as to what books, papers, publications or other articles infringe this provision, and any book, paper, publication or article so infringing shall be at once removed from off the trains of the Commission.

4. All papers, books, periodicals and other articles offered for sale under this agreement shall be sold at reasonable prices which shall be subject, from time to time, to the approval and revision of the Superintendent, and it shall be deemed a violation of this agreement for any agent of the Contractor to demand or receive a higher price than so approved for a like or similar article.

5. The Commission shall provide for the Contractor at such points on its line of railway as the Superintendent may designate, suitable and necessary room for the storage of the current stock of goods to be sold by the Contractor's agent on the Commission's trains, but such goods shall, during the time they are in or about any of the Commission's stations or premises, be at the sole and exclusive risk of the Contractor as to damage by fire or otherwise howsoever no matter how caused.

6. The Contractor shall not employ as its agent any person who is not of good moral character, and no agent who, in the opinion of the Superintendent, is guilty of any breach of propriety, courtesy or good conduct towards any passenger, officer, or employee of the Commission shall be retained in the Contractor's service. Should any such agent or employee of the Contractor so conduct himself, as in the opinion of the train conductor, to be offensive to or annoy passengers or be guilty of conduct which would justify the removal of a passenger, the train conductor may at once terminate his services for the trip and remove him from the train. Any agent or employee of the Contractor engaged in its service under this agreement shall be promptly dismissed from such service on the request of the Superintendent.

7. All train agents of the Contractor shall, while on duty, wear a neat uniform of blue cloth, including cap and badge, which shall be furnished by the Contractor at its own cost. The badge shall be worn in such a manner as to be conspicuously exposed to view at all times, and shall display the name of the Contractor and, also, in distinct figures large enough to be readily seen, the number by which the particular agent is designated.

8. It shall not be permissible for any train agent of the Contractor to pass through any sleeping, parlor or dining car on the train on which he may be engaged in such a manner or at such a time as to disturb or annoy the occupants. Neither shall he sit or loiter therein. The train conductor shall, in each case, decide when any such agent may or may not pass through any such car.

9. No agent of the Contractor shall deposit or leave packages of books, papers or other articles carried by him for sale upon any of the seats of coaches in which passengers are carried, nor shall he at any time occupy a seat in any coach to the exclusion or inconvenience of any passenger, nor importune passengers to purchase nor in trying to make sales annoy passengers by obtrusive persistence.

10. The necessary passes, with the usual conditions endorsed thereon for the proper officers and for the train agents of the Contractor engaged in selling articles on trains (one agent only to be allowed on each train), shall be provided by the Commission during the continuance of this agreement.

11. The train supplies of goods for sale by the Contractor's train agents upon trains of the Commission will be transported by the Commission at the sole risk of the Contractor upon the respective trains upon which they are being offered for sale in baggage cars in packages not exceeding two hundred pounds in weight free of charge, but the Contractor shall in no case suffer or allow to be included therein any articles or supplies for agents upon other railways, nor any other articles or materials whatever except such as are properly Contractor's supplies for sale on the Commission's trains, nor shall the Contractor nor any of its train agents be allowed to carry on any of the trains of the Commission parcels or any articles whatever for the accommodation of any person or persons whomsoever.

12. The Contractor shall not use the right, license or privilege hereby granted, or any train privileges incident thereto for any other business or purpose than those herein specified, nor shall the granting of the same to the Contractor be construed as restricting the Commission from selling in its dining cars, buffet or café parlor cars, in connection with its dining cars service, if any, all articles which it is customary to sell in connection with such service.

13. The Contractor hereby covenants to and with the Commission that it shall and will fully protect, indemnify, save harmless and defend the Commission from and against all loss, costs, charges, damages and expenses which the Commission may at any time hereafter bear, sustain, suffer or be put to for or by reason or on account of any injury, loss or damage to the person or property of any of the officers, agents or employees of the Contractor which may occur upon or about any train, station or premises of the Commission, whether resulting in death or otherwise, and, also, of and from all liability for any injury, loss or damage to stock, materials, effects or supplies of the Contractor while in the course of transportation on any trains of the Commission or while on the premises or in the custody of the Commission, whether such injury, death, loss or damage shall be the result of the negligence of the Commission or any of its servants, agents or employees.

14. The Contractor hereby authorizes and empowers the Commission or its solicitors to defend, settle or compromise, as it may deem expedient, any claim, suit, action or proceeding of any nature or description which may be brought against the Commission for or on account of any such injury, death, loss or damage to persons or property mentioned in the next preceding paragraph, and the Contractor hereby agrees to ratify and confirm all the acts of the Commission or its solicitors in that behalf and to pay to the Commission on demand any costs or disbursements incurred in defending, settling or compromising any such claim, suit or proceeding, and that the same with any damage so settled or agreed upon by the Commission or its solicitors and any claimant, or the amount of any judgment recovered against the Commission in the premises will be paid by the Contractor to the Commission forthwith on demand, and in default of payment of the amount thereof the Commission may at once sue for and recover the same from the Contractor as money paid for its use.

15. In consideration of the premises and of the rights, licenses and privileges hereby granted the Contractor covenants and agrees to pay the Commission for each year covered by this agreement the sum of four thousand dollars (\$4,000), payable in equal monthly instalments in advance on the 1st day of each month beginning with the 1st day of January, 1917, to the Treasurer of the Commission at the offices of the Commission in the City of Toronto, together with increased consideration each year based on the increased passenger earnings of the Commission in excess of \$500,000 per year, such increased consideration to be computed on the basis of eight mills on the dollar for every dollar increase in passenger earnings of the Commission in excess of \$500,000 per year, such increased consideration to be payable forthwith upon delivery by the Commission to the Contractor of statements showing such increased consideration, it being expressly agreed that the figures in the books of the Commission shall be absolutely final, binding and conclusive upon the parties as to the passenger earnings of the Commission for each year and the certificate of the person from time to time occupying, in the employment of the Commission, the position of auditor of Receipts and Car Accountant, shall be taken as conclusive evidence of such figures in the books of the Commission, irrespective and whether such auditor of Receipts and Car Accountant shall have occupied such position at all or any of the dates covered by such certificates.

16. Should the Contractor at any time make default in payment of any cash instalments hereby agreed to be paid or fail to fully carry out and perform in all respects any of the covenant and agreements on its part agreed to be kept, observed

and performed, this agreement may, at the option of the Commission, be declared at an end, and after five days' notice in writing under the hand of the Secretary to the Contractor of the intention to terminate this agreement, all the rights, licenses and privileges hereby granted shall cease, determine and be at an end, and thereupon the Commission may, at the expense of the Contractor, and without incurring any liability for damages thereby sustained, cause all advertising matter and property of the Contractor of every nature and kind whatsoever to be removed from all stations, building, premises and trains of the Commission or take such other or further action for the enforcement of the provisions of this agreement as to the Commission may seem advisable, and all passes granted to the Contractor or its agents shall forthwith become cancelled: PROVIDED, HOWEVER, that no such act on the part of the Commission shall entitle the Contractor to a return of any moneys theretofore paid under this agreement nor impair the right of action of the Commission for recovery of any and all damages on account of the non-payment by the Contractor of any instalment herein agreed to be paid on account of the non-performance or breach of any of the terms and covenants of this agreement. Failure on the part of the Commission to exercise any of the rights and privileges based upon any default under the terms hereof or waiver of any such default shall not debar or preclude the exercise by the Commission of any of the rights or privileges based upon any subsequent default under the terms hereof.

17. None of the rights and privileges hereby granted shall be sublet, transferred or assigned by the Contractor without consent in writing of the Secretary being first had and obtained, and the exercise and enjoyment hereof by the Contractor shall be subject at all times to the supervision, direction and control of the Superintendent and Secretary as herein provided.

18. Each of the parties hereby covenants with the other to observe, abide by, perform and keep the terms and provisions of this agreement in all respects according to the spirit, true intent and meaning thereof.

IN WITNESS WHEREOF the parties have caused these presents to be executed under their respective corporate seals and the hands of the proper officers in that behalf the day and year first above written.

Lowest tender—Canadian Car and Foundry Co., Ltd.—accepted.				

ARTICLES OF AGREEMENT made in duplicate, this 28th day of June, in the year of our Lord, one thousand nine hundred and seventeen.

BETWEEN :

THE CANADIAN CAR AND FOUNDRY COMPANY, LIMITED,  
hereinafter called the Contractor,

and

TEMISKAMING AND NORTHERN ONTARIO RAILWAY COM-  
MISSION, hereinafter called the Commission.

WITNESSETH :

1. In this Contract the word "Inspector" shall mean the Inspector for the time being appointed by the Commission to act for the Commission in the supervision of the construction and in the inspection and certification of the forty-ton steel frame box cars hereinafter referred to.

2. The Contractor will supply and provide all and every kind of work, labour, materials, articles and things whatsoever for the due construction and completion, and will well and duly build and complete, in a perfect and workmanlike manner, one hundred forty-ton steel frame box cars, with all necessary appliances for use on the line of railway of the Commission, in strict compliance with the specifications hereto annexed and with the plans and drawings relating thereto, (save and except that the Westinghouse air brake apparatus, mentioned in said specifications shall be furnished by the Commission, subject to the said cars being duly equipped therewith by the Contractor as provided for by said specifications), to the complete satisfaction of the Inspector, and the Contractor will deliver the said steel frame box cars duly completed to the Commission free on the railway tracks of the Commission at the Town of North Bay, on or before the thirty-first day of October, 1917, time being agreed to be material and of the essence of this contract, subject, however, to delays occasioned by strikes, accidents, delays of other carriers or other delays which are unavoidable or beyond control of the Contractor.

3. The Contractor shall, within fifteen days from the date hereof, deliver to the Mechanical Engineer of the Commission, at his office in North Bay, two complete sets of blue prints of said steel frame box cars, and in case same shall in any respect be found not to conform with the specifications the Contractor will promptly, on defects being pointed out, rectify same and supply to the Commission correct copies.

4. The Inspector will be the sole judge of all work and material done and supplied under this contract, and his decision on all question in dispute, with regard to any such work or material, shall be final, and the whole work shall be executed to his satisfaction as evidenced by his certificate in writing, which certificate shall be a condition precedent to the right of the Contractor to be paid therefor.

5. The Inspector and all persons from time to time authorized by him in the behalf shall have free entry and access to the works of the Contractor at all times while this Contract is being performed, and shall have all reasonable facilities afforded to him and his representatives as aforesaid to satisfy him that the same is being carried out and performed in accordance with this contract.

6. The acceptance of and payment for one or more of said cars by the Commission shall not be considered as any waiver of the obligations of the Contractor with reference to the others.

7. This Contract shall not be considered as fully completed until the guarantee clause in the attached specifications respecting materials and workmanship have been fully complied with. The books kept in the office of the Master Mechanic of the Commission shall be taken as final and conclusive of the time the said materials have lasted in service.

8. The Commission in consideration of the premises covenants with the Contractor, that the Contractor from time to time and in all respects having fulfilled and performed the provisions of this contract (except the fulfillment of the guarantee, which is to continue as shown in said specifications), on the Contractor's part intended to be fulfilled and performed, will be paid for and in respect of each of the said steel frame box cars the sum of two thousand six hundred and nine dollars and fifty cents, payments to be made within five days after the delivery of each car, f.o.b. tracks of the Commission at North Bay as aforesaid.

IN WITNESS WHEREOF the said parties have caused these presents to be executed under their respective corporate seals and under the hands of the proper officers in that behalf.

THIS AGREEMENT made in duplicate this 8th day of September, A.D. 1917.

BETWEEN :

DOMINION WHEEL & FOUNDRIES, LIMITED, hereinafter called the Contractor,

—and—

TEMISKAMING AND NORTHERN ONTARIO RAILWAY COMMISSION, hereinafter called the Commission.

WITNESSETH that in consideration of the mutual covenants and agreements herein contained and other good and valuable consideration, the parties hereto have mutually agreed and do each agree with the other as follows:—

1. The Contractor agrees to sell and deliver to the Commission as and when ordered all the cast iron car wheels required by the Commission for the period of one year commencing the first day of November, 1917, such cast iron car wheels to be constructed in strict compliance with the Master Car Builders' rules and regulations and to the complete satisfaction of the Chief Engineer and Superintendent of Maintenance of the Commission, and the Commission agrees to purchase and pay for said cast iron car wheels at the rate or price of forty-four dollars and eighty cents (\$44.80) per net ton.

2. The said cast iron car wheels shall be delivered to the Commission free on board the Commission's tracks at the Town of North Bay.

3. The Contractor further agrees to sell and deliver to the Commission as and when ordered all the grey iron castings required by the Commission during the said period of one year, such iron castings to be constructed to the complete satisfaction of the Chief Engineer of the Commission, and the Commission agrees to purchase and pay for such grey iron castings at the rate or price of sixty-six dollars (\$66.00) per net ton.

4. The said grey iron castings shall be delivered to the Commission free on board the Commission's tracks at the town of North Bay.

5. In consideration of the premises the Contractor agrees to purchase and the Commission agrees to sell for the period above mentioned all the Commission's used cast iron car wheels, and the Contractor agrees to pay for such used cast iron car wheels at the rate or price of fifteen dollars and ninety cents (\$15.90) per gross ton, such used cast iron car wheels to be delivered to the Contractor free on board the Commission's tracks at the Town of North Bay, and the Contractor further agrees to purchase and the Commission to sell all the Commission's cast scrap and malleable scrap iron at the rate or price of fifteen dollars and seventy-five cents (\$15.75) per gross ton, such cast and malleable scrap iron to be delivered to the Contractor free on board the Commission's tracks at the Town of North Bay.

THIS AGREEMENT and everything herein contained shall enure to the benefit of and be binding upon the parties hereto their successors and assigns respectively.

IN WITNESS WHEREOF the parties hereto have hereunto set their respective corporate seals under the hands of the proper officers in that behalf.

NIPISSING CENTRAL RAILWAY.

Fire at Car Barn.

On March 4th, 1917, during the early hours of the morning, fire destroyed the north end of the car barn and five electric passenger cars, and one partially burned.

During period of reconstruction and until new cars—which were purchased in St. Louis—were received, the service was of necessity greatly restricted.

This period, however, was of short duration and full schedule was under operation within two weeks. Loss and damage under this heading as recorded below:—

Property.	Original Value.	Salvage.	Depreciation.	Net Loss.	Insurance Recoverable.

W. H. MAUND, ESQ.,  
Secretary-Treasurer,  
Toronto, Ont.

DEAR SIR,—I beg to submit my annual report as Chief Engineer and Superintendent of Maintenance, for the fiscal year ended October 31st, 1917.

Mileage.

The mileage now operated is as follows:—

Main Track—	
Owned and maintained by Company .....	4.92 miles
Leased from T. & N. O. Ry. Commission:	
Maintained by Company .....	5.28 “
Maintained by Commission .....	5.17 “
	15.37 miles

**Sidings and Spurs—**

Sidings on that part of the line owned by T. & N. O.

Ry. Commission:

Yard Tracks and Sidings .....	1.65 miles
Private Sidings .....	1.03 "
	———— 2.68 miles

Sidings on that part of the line owned by N. C.

Railway:

Company Spurs .....	2.00 miles
Private Spurs .....	0.11 "
	———— 2.11 miles

Total Track .....	20.16 "
-------------------	---------

**Equipment.**

Rolling stock consists of the following:—

- 5 Electric Motor Passenger Cars.
- 1 Combination Switching Locomotive, Express Car and Snow Plow.
- 2 Freight Cars.

**Fire at Car Barns.**

On March 4th, 1917, fire destroyed the north end of the car barns. The part of the building destroyed comprised the offices and the car shed. As the fire occurred in the early hours of the morning the cars were in the building and five of them were completely and one partially burned. It was necessary to operate a restricted service until three more cars, which were purchased in St. Louis, were placed in service.

The rebuilding of the car barns was undertaken and will be completed within a short time. The tar and gravel roof was put on by the Maitland Roofing and Supply Company of Toronto, while the plumbing is being installed by F. R. Gibson, of Haileybury. The remainder of the work is being done by our own forces.

**Additions to Road and Equipment.**

During the year a through siding 605 feet long was constructed for the Riordan Pulp and Paper Company, near their mill on Foster's Spur, Haileybury.

There is a decrease in the amount of rolling stock owned, due to the fire in the car barns, as noted above.

**Maintenance.**

The property of the company continues to be maintained in good condition. The buildings and equipment suffered considerable damage through fire as mentioned above, but this damage, at the close of the year, had been largely repaired.

Respectfully submitted,

S. B. CLEMENT.

*C. E. & S. of M.*

TENDERS, RECONSTRUCTION CAR BARNs, NORTH COBALT.

Henderson & Angus .....	\$13,750 00
Colgan & Martin .....	13,520 00

Upon recommendation C. E. & S. M. Clement, above tenders declined, and work being done by day labor under supervision of Bridge and Building Master, W. J. Oldham.

TENDERS, TAR AND GRAVEL ROOFING, NORTH COBALT CAR BARN—PARTIES ALSO ASKED TO TENDER ON SKYLIGHTS.

Temiskaming and Northern Ontario Railway Commission

# THE MINING INDUSTRY

IN THAT PART OF

NORTHERN ONTARIO

SERVED BY THE

Temiskaming and Northern Ontario Railway

ONTARIO GOVERNMENT RAILWAY

---

CALENDAR YEAR 1917

---

By ARTHUR A. COLE

Mining Engineer

---

PRINTED BY ORDER OF  
THE LEGISLATIVE ASSEMBLY OF ONTARIO

---

TORONTO :

Printed and Published by A. T. WILGRESS, Printer to the King's Most Excellent Majesty

1918

TO HIS HONOUR SIR JOHN STRATHEARN HENDRIE, K.C.M.G., C.V.O., a Colonel  
in the Militia of Canada, etc., etc.

*Lieutenant-Governor of the Province of Ontario.*

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present to Your Honour Report of the  
Mining Engineer on the Mining Industry in that part of Northern Ontario served  
by the Temiskaming and Northern Ontario Railway for the calendar year 1917.

Respectfully submitted,

F. G. MACDIARMID,

*Minister of Public Works and Highways.*

HON. FINLAY G. MACDIARMID,

*Minister of Public Works and Highways,*

Toronto.

SIR,—I have the honour, by direction, to submit to you Report of the Mining Engineer on the Mining Industry, in that part of Northern Ontario served by the Temiskaming and Northern Ontario Railway, for the calendar year 1917.

I have the honour to be,

Sir,

Your obedient servant,

W. H. MAUND,

*Secretary-Treasurer.*

## TEMISKAMING AND NORTHERN ONTARIO RAILWAY COMMISSION

---

J. L. ENGLEHART, Chairman.

DENIS MURPHY, Commissioner (Deceased).

GEO. W. LEE, Commissioner.

W. H. MAUND, Secretary-Treasurer.

A. A. COLE, Mining Engineer.

Opening up a claim in the Lightning River District—Early Winter, 1917.

## SILVER

(When the great war broke out mining, like most of the industries, felt the shock and took a little time to readjust itself to new conditions. Then when the tremendous war orders began to come in almost all metals except gold and silver increased in value. Gold, as the basis of values, nominally remained stationary, but silver did not seem to be needed, the demand slackened and the price dropped. The silver market went from bad to worse till at last the price of 46 cents per ounce was reached, the lowest price ever recorded in the history of the industry. Naturally these conditions had an adverse effect on the production of the Cobalt Silver Camp, and all operations were curtailed. Several of the mines continued producing silver, but stored it all awaiting a more favourable market, and when the rise did come these companies reaped the benefit.)

All the principal warring nations are operating on a gold standard, consequently each nation began to hoard its gold with the result that it practically disappeared from circulation. Ordinary business had to be carried on by the use of the small amount of silver coinage already in circulation and with paper money for the rest. (Even in times of stress much less serious than the present the average individual prefers silver to paper, and this is particularly the case in Europe, so that the demand for a larger silver coinage gradually became more and more insistent. Great Britain, France, and the United States all entered the silver market, with the result that a more phenomenal rise took place; and the silver miner at last considered that he was coming into his own. The price at the end of 1916 was 75 cents per ounce, and this price held till July, 1917, when a further rise took place, reaching a maximum on September 25th when the price was \$1.08½ per ounce. Then the price receded to about 85 cents, at which point it stood when the year closed. The average price for the year was 81.47 cents.)

In the early days of the Cobalt Camp a small allowance was made to shippers for ore containing a cobalt content of from 6 per cent. up. Then for some time no allowance whatever was made for the cobalt contents of the ore, but recently the demand for metallic cobalt has increased to such an extent, particularly for the manufacture of the alloy "stellite," that the smelters are paying again for the cobalt. One mining company's receipts for the year for cobalt contents alone amounted to \$40,000. Still more recently the demand has become keener, one of the reasons being that there is a large call for arsenic as well as cobalt, and as the cobalt occurs as an arsenide in the ores of the Cobalt Camp, the arsenic contents rise with the cobalt.)

At present there is a great call in Cobalt for a metallurgical process for the economical treatment of flotation concentrates, and although a considerable amount of investigation has taken place no satisfactory method of treating this material at the point of production has yet been discovered. Shipments of flotation concentrates will, therefore, continue to the smelters at Denver, although a combined freight and treatment charge of over \$24.00 per ton has to be paid.

The flotation process has made important advances during the year, but the uncertainty of the standing of the different flotation patents and the fear of costly litigation similar to that experienced in the United States has undoubtedly retarded expansion. Fortunately, the Canadian patent laws are much more liberal than those of the United States, so that an infringer of a patent in Canada can only be compelled to pay a reasonable royalty for the use of a patent. The mine

operators of Cobalt do not object to paying a reasonable royalty, but they do want the matter settled so that they may know what they have to count on on this score. The Dominion Government has promised to take action and to have a reasonable royalty set.

The total silver production of the Cobalt district up to the end of 1917 is shown in the following table, taken from the Preliminary Report of the Ontario Bureau of Mines:

	Average Price cents per ounce	Ounces	Value

1914.....	54.8	25,162,841	12,765,461
1915.....	49.69	24,746,534	12,135,816
1916.....	65.661	19,915,090	12,643,175
1917.....	81.418	19,401,893	16,131,013
Total.....		274,724,172	151,960,561

(The production according to source was as follows:

	Ounces
Cobalt.....	18,327,258
South Lorrain.....	10,000
Gowganda .....	1,064,635
Silver recovered from gold and copper ores.....	77,914
Total.....	19,479,807

The leading shipper was the Mining Corporation of Canada with an output of 4,546,065 ounces for the year. Other mines shipping over one million ounces were the Nipissing, Kerr Lake, Crown Reserve, O'Brien, Miller-Lake-O'Brien and McKinley-Darragh. The only new shipper produced during the year was the Adanac.

Among the few shippers of silver ore outside of the Cobalt Camp proper, the Miller-Lake-O'Brien of Gowganda is easily the most important. (Last year a most spectacular find was made on this property and this year the favourable development of this discovery has been the means of reviving considerable interest throughout the Gowganda district. It is noticeable, also, that the most active exploiting of the prospectors in this district is being done by some of the best known Cobalt companies, which are using part of their surpluses in this way in an endeavour to increase their mining holdings in the district. This augurs well for the district, as these companies, with their experience gained in Cobalt, would not go into a new district if they did not consider there were good prospects there. That experience will also enable them to work the claims to the best advantage.) Among the Cobalt companies adopting this policy are the Mining Corporation of Canada, Crown Reserve, Kerr Lake and LaRose, and we find that some of these companies are also acquiring some excellent gold prospects.

There is such a demand for silver from the allied nations that it now may be considered a war metal and its production a patriotic service. Apart from this the mining companies have taken a leading part in all patriotic work. The assistance given by a number of the mining companies to their employees in helping to increase the output of garden produce was most noteworthy, and was attended with satisfactory results.

GOLD

Gold being the general basis of exchange its value is supposed to remain stationary, no matter how other commodities may fluctuate. If, however, all the necessities of life, such as wheat, increase in value so that an ounce of gold will only buy half the amount that it would buy before the war, then this amounts to a depreciation in the value of gold. This is the plight in which the gold mining industry finds itself at the present time. Not only is the cost of labor going up but all commodities used in the production of gold have gone up, while at the same time there can be no rise in the value of the gold product to effect this increased cost.

In the Porcupine gold area, notwithstanding these adverse conditions, the production for the year amounts to 398,257 ounces, with a value of \$8,229,744.

The leading producers with their approximate outputs were:

Company	Ore Milled	Gold Recovered	
	Tons	Ounces	Value
			\$
Hollinger Cons. ....	514,301	204,810	4,233,777
McIntyre-Porcupine ....	175,893	81,827	1,606,126
Dome Mines. ....	359,570	71,193	1,471,705
Porcupine-Crown. ....	39,111	18,180	375,766
Porcupine V.N.T. ....	34,971	10,416	208,350
Schumacher ....	37,323	9,551	197,413

In addition to the above small outputs were made by the Dome Lake and Newray.

The favourable deep developments in the McIntyre, Hollinger, Porcupine Crown and Dome Mines, as well as the information gained by deep diamond drill cores tend to show that the ore at depth is of the same character as higher up, and all these indications point to the probability of deep mining at Porcupine.

Outside of the producing mines there have been important working extensions of the camp both north and south. The Ankerite property in northern Deloro, belonging to the Coniagas Mines of Cobalt, has started the sinking of a 500-foot shaft on contract. The Maidens-Macdonald, an adjoining property, has also been bought by the same interests.

Control in the Newray, formerly the Ray property, situated to the north-east of the Pearl Lake group, has been acquired by Crown Reserve and Dominion Reduction interests of Cobalt. This was one of the early discoveries of the Porcupine camp, but owing to lack of sufficient capital the property was never given a thorough testing out. Recent developments indicate that it is likely to become an important producer in the future. A number of claims in northern Tisdale are also being opened up and will be given further prospecting development.

General scene in Lightning River District—Gold finds are located in high ground in the distance—1917.

The Kirkland Lake district ranks next to Porcupine in importance in the gold area. This district was very active during the year, and many new properties have been opened up, extending the probable producing area very materially. The new development has been mostly to the west and south-west of Kirkland Lake.

The following is a list of the most active properties running roughly from west to east:

- Canadian Kirkland.
- United Kirkland.
- Kirkland Lake.
- Kirkland Porphyry.
- Teck-Hughes.
- Minaker Kirkland.
- Lake Shore.
- Wright-Hargraves.
- Aladdin Cobalt.
- Tough-Oakes.
- Fisher.
- Ontario.

The only two producers were the Tough-Oakes and the Teck-Hughes.

Company	Ore Milled	Gold Recovered	
	Tons	Ounces	Value
Tough-Oakes.....	38,695	16,384	\$ 338,593
Teck-Hughes.....	11,257	3,181	65,753

The Teck-Hughes mill has been doubled in capacity so that it now treats 80 tons per day. The main shaft is being sunk to the 700-foot level. The Lake Shore has developed an ore shoot containing some spectacular ore on the second level under Kirkland Lake, and a cross-cut is now being driven to cut this ore on the 400-foot level. The Lake Shore mill, with capacity of 75 tons per day, started operations in March, 1918.

The Kirkland Lake Gold Mines are sinking a central shaft to the 700-foot level. The foundation for their mill is now complete and the mill is expected to be ready for operation by next September. The Kirkland Porphyry Company also plans a mill for 1918.

Favourable deep developments on the operating properties, particularly on the Kirkland Lake, Teck-Hughes and Lake Shore properties, are of a most encouraging nature and indicate that further extensions to the producing zone are likely to be found extending to the west and south-west of the present operators around Kirkland Lake.

In Munro Township the Croesus Mine has replaced its plant and rebuilt its mill which were wiped out by the devastating fire of 1916. The mill was ready for operation in the spring of 1917, but owing to water troubles in the mine the mill has not been operated continuously. The mill has a 30-40 ton daily capacity, but the company still ships high-grade hand-sorted ore to the smelter.

At Boston Creek the Miller-Independence produced a little gold and the Patricia Syndicate started development.

The Bourkes Mines, Limited, situated near Bourkes Station, in the Township of Benoit, have installed a small plant and have disclosed some spectacular ore in development.

Among the notable gold finds made during the year one in Rickard Township stands out pre-eminently. The original discovery has been acquired by the Mining Corporation of Canada, camps are now being erected and development started. Some spectacular material has already been produced. A very promising find has also been made in the Lightning River district. This is reached either from Ramore Station or by a 30-mile bush road north-east from Kirkland Lake. The ore is quartz in a vein varying from one to five feet in width.

Larder Lake, Powell, Skead and McElroy all show a little activity.

The work that is being done in the gold area is of such a nature as to put the whole industry in better shape for the future and we may expect to see the production steadily increase both by larger output from the present producers and also by the development of prospects into mines. If the gold mining industry can make such progress in the face of present adverse conditions the return to anything like normal conditions in the future can be looked forward to most hopefully.

NICKEL

The Alexo Mine continued to ship nickel ore during the year to the Mond Nickel Company's smelter at Coniston, Ontario. The shipments for the year amounted to 5,604.85 tons.

COPPER

The copper property opened up at Cedar Lake, about 4 miles north of Temagami Station, which was under option to M. J. O'Brien, of the O'Brien Mine, Cobalt, was worked from early in the year to the end of the first week in September. The surface exposure was one of the best copper showings that has been found in this part of the country and from it there was shipped a car and a half assaying as follows:

Gold .....	.005 Ounces
Silver.....	1.96    "
Copper.....	7.95 %
Nickel.....	6.00 %

A 55-foot shaft was sunk on Claim 1,623 to a depth of about 60 feet, and over 200 feet of cross-cutting and drifting done. At this depth the deposit broke up and became shattered into a number of unworkable stringers with considerable copper pyrites, which was so sparsely disseminated as to be uncommercial.

The veins were found underground to behave very much as the veins found in the Keewatin at Cobalt. Pockets of copper were encountered, but the expense and difficulty of doing further work to determine the existence of any large body of copper ore were considered to be inadvisable, and further work has been abandoned for the present.

MOLYBDENITE

Interest has revived in an occurrence of molybdenite at mileage 76½ and arrangements are being made for further development.

## BARITE

Barite is now being worked by the Premier Langmuir Mines, Limited, the only working barite property in Northern Ontario.

*Location.* The property consists of seven patented claims situated on the southern boundary of the Township of Langmuir, on the east branch of the Night Hawk River. It is 30 miles by water route from Connaught Station on the Porcupine Branch of the T. & N. O. Railway and 6 miles up the Night Hawk River from Night Hawk Lake.

*Ore.* The vein consists of white barite 5 ft.-10 ft. wide, containing sufficient silver near one wall to make a workable silver ore by sorting. The vein has been traced over 1,000 feet on the surface.

*Development.* The development work consists of a tunnel run into the hill-side 100 feet on the vein and a 50-foot shaft near the portal. Sinking will be continued to 120 feet and at 60 feet a level will be opened up.

*Plant.* A 150 h.p. boiler runs the 6 x 8 hoist and the engine which will supply the motive power to the mill. No compressor has yet been installed and all drilling is done by hand.

*Mill.* A mill is now being equipped and is expected to be ready for the production of powdered barite early in the spring. The ore, after passing a (6 in. x 10 in.) jaw crusher, is delivered to shaking screens and then to a picking belt making two products.

(1) The pure barite goes to rotary dryer and then to special pulverizers where it is ground to 200 mesh and packed for shipment.

(2) The silver ore is to be concentrated by a process at present being developed. The finished barite will be transported in scows to Connaught Station for shipment.

## FIRE AND POTTERY CLAYS

On a recruiting trip to Moose Factory, Capt. C. M. McCarthy, of Elk Lake, discovered a deposit of clay, samples of which he submitted to the Mines Branch at Ottawa.

The following notes have been supplied by Mr. Joseph Keele, of the Mines Branch:

"A sample of white clay from a bed on the Mattagami River was recently received for examination at the laboratories of the Mines Branch, Ottawa. Capt. C. M. McCarthy, of Elk Lake, the discoverer of the deposit, states that it is situated near the foot of the Long rapid, and is exposed for a length of 700 feet along the bank of the river, and that it is at least 8 feet thick, but continues below the water level. A deposit of similar clay occurs on the same river about 20 miles further north.

"The material is highly refractory, as it does not deform when raised to the temperature of the softening point of standard cone 33 (3,254 deg. F.). This is the first record of the occurrence of a number 1 fire clay in Ontario, and there are few clays as refractory as this in Canada as far as we know at present.

"The working qualities of the clay are good, and the shrinkage in drying and burning are within practical limits. It burns to a white colour at the lower temperature, but when burned to cone 9 (2,390 deg. F.), the temperature at which fire bricks are generally burned in practice, small black specks, probably of iron, develop in the body.

"An analysis by W. K. McNeil shows the chemical composition of the clay, and the small amount of fluxing impurities it contains:

Silica .....	53.10
Alumina.....	31.98
Iron.....	1.52
Lime.....	.51
Magnesia .....	trace
Soda.....	.54
Potash .....	.28
Ignition Loss.....	12.35

"When the clay is mixed with an excess of water and washed through a 200-mesh screen, about 20 per cent. of fine quartz sand remains behind.

"The fine washed clay was made up into a standard porcelain body having the following composition:

Washed Mattagami clay.....	50 per cent.
Ground feldspar .....	20 "
Ground quartz.....	30 "

"Test pieces of this composition were burned in a china kiln to cone 10, and afterwards glazed and refined. These pieces had a beautiful ivory tone, but were not suitable for commercial china or semi-porcelain wares where a white colour is strictly required. The clay could be used, however, in making sanitary porcelain, vitrified floor tiles and wall tiles. Much of the china clay imported for these purposes has not as good colour as the Mettagami clay, and a little cobalt stain added to the latter would materially improve the colour.

"A similar white clay occurs on the Missinabi and Wabiskagami Rivers, but which seems to be more sandy in texture than the Mattagami clay. This occurrence was described in 1890 by Mr. E. B. Borron, in the Bureau of Mines Report of Ontario.

"These clay deposits are of great geological interest, as they are probably of Tertiary age. They are certainly pre-glacial deposits."

### FUEL IN NORTHERN ONTARIO

What would happen to Ontario if the United States should issue an embargo on the shipment of coal to Canada? In less than six months many parts of the country would be reduced to a worse physical plight than present-day Belgium. Many of our industrial establishments are working on a one month's fuel reserve, while some only have a two weeks' supply ahead. The Province of Ontario is absolutely dependent on the United States for its fuel supply. Last winter, owing to labour conditions and car shortage, we narrowly averted the very serious consequences of a coal famine. This year the United States coal mines produced more coal, but the demand has increased much faster than the supply with the result that there is a large shortage. During the winter 1917-18 we were receiving daily reports of coal shortage from many parts of Ontario and this condition is likely to become worse before spring. Looking into the future, too, we cannot hope for much better conditions, and it is, therefore, not only a possibility, but a probability that the United States, on account of her own pressing needs, will have to materially restrict her coal shipments coming into Ontario. It, therefore, behooves us to find what possible substitutes we have for coal in Ontario, and in this connection conditions in Northern Ontario may be considered typical of the rest of the Province.

Along the Temiskaming and Northern Ontario Railway our industries are practically dependent on American coal for their continued operation. During

the twelve months ending September 30th, 1917, there was imported to T. & N. O. Railway points, exclusive of the coal used by the railway, 19,802 tons of anthracite coal, and 102,752 tons of bituminous coal. If this supply were even partially cut off what substitute could we obtain?

*Wood.* Hardwood forests occur north of North Bay for a distance of about 40 miles, but the high cost of taking this material out and the long railway haul to a market from a minimum of 60 miles to Cobalt to a maximum of over 200 miles to Cochrane, practically precludes the use of hardwood as a commercial fuel.

The soft woods along the railway are used at present to supply a certain amount of the domestic fuel, but as time goes on the cost continues to rise and this commodity is becoming more scarce. In a few isolated places small mining plants situated in the thick bush, and at a distance from the railway, find it feasible to use wood for the generation of power, but even a small plant will clear the wood from an ordinary lot in less than two years and then the cost goes up. The extension of the use of softwood cannot, therefore, be much counted on.

*Hydro-Electric Power.* In the initial stages of the development of the Cobalt Camp wood was the fuel most extensively used, but coal was so readily brought in by rail that it soon replaced the wood at the mines. By the time hydro-electric power was developed and brought into the Camp the boiler capacity of the mining plants was more than 10,000 h.p. At this time the coal shipments had reached 150,000 tons to Cobalt, but the introduction of hydro-electric power was the means of cutting down the coal shipments to 30 per cent. of what they had previously been. Coal had still to be used for heating purposes.

To supply the Cobalt Camp three power plants were developed on the Montreal River, and one on the Matabitchewan River. Two plants on the Mattagami River supply power to the Porcupine Camp and a 22,000 h.p. development on the Abitibi takes care of the power needs of the Abitibi Power and Paper Company at Iroquois Falls. The power from these plants is being utilized at present to almost full capacity with the exception of one plant at Cobalt, which is operated for the most part as an auxiliary in case of a tie up of any of the other Cobalt plants. Little help need, therefore, be looked for from these plants at the present time. If hydro-electric power is to relieve us from a possible coal famine it must, to a large extent, be by new power developments. Fortunately, there are a number of large water-powers in the district which are still undeveloped, the largest being on the Quinzes River at the head of Lake Temiskaming.

*Peat.* Peat as a fuel has been known and used for many years in Europe, but in Canada its production has never been a serious competitor with coal. With the large increase in the cost of coal to the consumer, peat as a fuel now becomes a possibility, and with the likelihood of a coal famine before us peat fuel becomes a probability. Peat bogs are known to occur at many points along the T. & N. O. Railway from mileage 38 to Cochrane, some of them having an area of several thousand acres. Samples of some of these peat bogs were sent to Ottawa where they were found to have a very satisfactory calorific value. In order to have an expert opinion on these peat bogs Mr. A. Anrep, Peat Expert for the Dominion Government, was sent up from Ottawa, and during the ten days from 20th October to 1st November, 1917, made a preliminary investigation of the peat bogs in the vicinity of Cochrane. Mr. Anrep reported as follows:

#### *Cochrane Peat Bog.*

The total area of the Cochrane Peat Bog has not been ascertained, as the investigation in that section commenced late in the season, and only a very short time

was available. During that period the approximate quality and depth were determined.

The Cochrane Peat-Bog is situated about one mile south of Cochrane Station, in Lamarche Township, probably continuing into St. John and Hanna Townships, County of Temiskaming, Ontario, and runs in a north and south direction. The part of the area investigated covers approximately more or less of:

Lots 5 and 6, Con. IV.,	Township of Lamarche
Lots 4, 5 and 6, Con. V.,	“ “ “
Lots 3 to 6, Con. VI.,	“ “ “

The total area of the bog of which a preliminary investigation was made is approximately 1,400 acres.

Approximately 100 acres have a depth of less than 5 feet, assuming an average depth of 4 feet (615,000 cubic yards).

Approximately 200 acres have a depth of more than 5 feet, assuming an average depth of 8 feet (2,696,000 cubic yards).

Approximately 960 acres have a depth of more than 10 feet, assuming an average depth of 13 feet (20,000,000 cubic yards).

Approximately 80 acres have a depth of more than 15 feet, assuming an average depth of 16 feet (2,161,000 cubic yards).

Approximately 60 acres have a depth of more than 20 feet, assuming an average depth of 21 feet (2,147,000 cubic yards).

The portion of the bog which is situated more or less adjacent to the railway track of the Temiskaming and Northern Ontario Railway, between the mileage 249 and 250, is fairly well suited for the manufacture of machine peat. Following the margin of the bog for a few thousand feet in a northerly direction the peat is well humified and is of considerable depth. This part of the bog is very heavily wooded with dwarf spruce. Towards the centre of this part of the bog, in the south half of lot 4, Con. V, the depth increases considerably, and the peat is less humified, which makes it less suitable for the manufacture of peat fuel. However, if this part is properly drained it will gradually humify, and by the time the well humified peat from the margin of the bog is utilized, and worked towards the centre, that portion which is situated in the centre and which is poorly humified at present will have become suitable for the manufacture of peat fuel.

The peat in the remaining portion of the bog is less humified than the peat following the margin of the bog, but as soon as the whole bog is properly drained the peat will undergo a desirable change; that is the vegetable matter will come into direct contact with the air, the plants will become oxidized, and in a comparatively short time the peat will undergo humification and become fairly suitable for the manufacture of fuel. However, such a change will only set in rapidly if the peat is composed of carex, eriophorum or hyphum, but if it is composed mainly of sphagnum mosses the humification process is much slower.

During the latter part of October, when making a preliminary investigation of this area, the surface of the bog was practically submerged by water. This condition would be much worse in the spring. To eliminate this difficulty the bog must be properly drained before any rational manufacture of peat fuel can be undertaken.

During the drilling it was found that the peat was composed mainly of carex and eriophorum plants, the upper layer of a thickness of from 1-3 feet is mostly composed of sphagnum mosses, lightly intermixed with carex and eriophorum plants.

The following analyses were made from the samples obtained by Mr. A. A. Cole:

Four samples were taken from mileage 249½, two at 243 and three at 240 at various depths shown in the following table:

Sample No.	Bog Mileage	Depth in feet	Moisture on Sample as received	Calorific values Calories	Dried Sample B. T. U.
1 .....	249½	6	88.2	5,290	9,530
2 .....	"	7	88.5	5,130	9,240
3 .....	"	9	89.8	5,190	9,340
4 .....	"	14	89.4	4,970	8,950
5 .....	243	3	84.9	5,090	9,170
6 .....	"	6	87.8	4,880	8,790
7 .....	240	2	81.9	5,140	9,250
8 .....	"	4	85.4	4,720	8,500
9 .....	"	6	85.8	4,650	8,380

From the above it is noticeable that sample 4, taken from the bottom layer at mileage 249½ has a slightly lower calorific value than the higher layers, but that is due to the fact that a certain amount of foreign matter from the bottom of the bog had entered into the peat sample, which must have increased the ash content.

The preliminary investigation of the bogs south of Cochrane, on the T. & N. O. Railway, was made during the same period, and from these investigations it could be gathered that these bogs are less suitable for immediate manufacture of peat fuel than the Cochrane bog, unless the peat were to be converted into peat powder fuel.

Drill holes were made at the following mileage: Mileage 243 indicates an average depth of 5-8 feet containing a quality B+ average, that is, peat fairly well suited for the manufacture of peat fuel. The analysis of the peat taken from this bog is shown in above tabulation (samples 5 and 6).

Mileage 240 indicates an average depth of 5-7 feet, containing a quality of B to B+, that is peat fairly well suited for the manufacture of fuel. Samples 7, 8 and 9 are from this bog.

The moisture content of all the above samples is determined as the peat was received at the laboratory.

Mileage 239 indicates an average depth of 5-6 feet, containing a quality of B+ to B—, that is, peat very well suited for the manufacture of fuel.

The formation of these bogs is very similar to the bog near Cochrane. The disadvantages of these peat areas lie in the fact that the surface is very heavily timbered, the clearing of which would involve a great expenditure at present, and also the depth of the peat is inconsiderable, as it must also be taken into consideration that after drainage the depth would decrease 2 feet.

It is very difficult to determine the correct depth of a bog when only a few drillings have been made, therefore the writer suggested to the Honourable Mr. Ferguson, Minister of Mines, Toronto, and to Mr. A. A. Cole, Mining Engineer, Cobalt, that the investigation of the peat area between North Bay-Cobalt, Cobalt-Cochrane, be continued on systematic lines. This advice has been accepted and the peat areas are already under way to be properly surveyed and drilled. The writer begs also to suggest that, keeping in mind the object of the development in the near future of the peat bogs, it would be advisable that minimum areas of bogs of known value as to quality, location and railway facilities should be secured, and such drainage and clearing be done as is necessary to permit of the manufacture of peat fuel. These suitable areas will be available for private interests to purchase, or lease, or, if necessary, retained by the Government, as under existing circum-

stances it is not likely that private capital will have the inclination or foresight to prepare such areas. If such steps for the preparation of the peat areas be taken, a great deal of delay in connection with the preparation of the peat areas will be eliminated.

It must also be borne in mind that the bog at Cochrane has a very high calorific value; still certain portions of the bogs are not suitable for the manufacture of a very high grade of domestic fuel, as the peat is not sufficiently humified, and lacks cohesive properties. For this reason the writer advised that the output of peat be increased in the near future, and that the plant be combined with a peat powder plant, and the product used for industrial purposes instead of for domestic use, as, according to analysis, the fuel contained a very satisfactory calorific value. This suggestion was based on the knowledge that in Sweden there are several large peat powder plants in operation, and that the State Railway between Stockholm and Ringby uses peat powder as its only motive power.

Ontario obtains all her coal from the United States. With the enormous increase in industrial development in the United States, due principally to war work, it is becoming increasingly difficult for them to supply even their own demands for coal. If this condition of affairs continues, the day cannot be far distant when we will be warned to provide for our own fuel requirements, at least to a much greater extent than at present. Our chief hope of being able to do so is in the further development of hydro-electric power with the further assistance of the production of peat for fuel. At best it will require several years' work to adequately prepare our water powers and our peat bogs to meet this emergency.

*To His Honour, COLONEL SIR JOHN HENDRIE, K.C.M.G., C.V.O.,*

*Lieutenant-Governor of Ontario.*

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present to Your Honour the Tenth Annual Report of the Hydro-Electric Power Commission of Ontario for the fiscal year ending October 31st, 1917.

Respectfully submitted,

ADAM BECK,

*Chairman.*

TORONTO, ONT., February 12th, 1918.

COLONEL SIR ADAM BECK, K.B., LL.D.,

*Chairman, Hydro-Electric Power Commission of Ontario,*

*Toronto, Ont.*

SIR,—I have the honour to transmit herewith the Tenth Annual Report of the Hydro-Electric Power Commission of Ontario for the fiscal year ending October 31st, 1917.

I have the honour to be,

Sir,

Your obedient servant,

W. W. POPE,

*Secretary.*

TENTH ANNUAL REPORT  
OF THE  
Hydro-Electric Power Commission  
of Ontario

SECTION I  
LEGAL PROCEEDINGS

ACTS

The following Act to amend *The Power Commission Act* and to confirm certain by-laws and contracts was passed by the Legislature of the Province of Ontario during the Session of 1917.

An Act to amend *The Power Commission Act* and to confirm Certain By-laws and Contracts.

*Assented to 12th April, 1917.*

**H**IS MAJESTY, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:—

1. This Act may be cited as *The Power Commission Act, 1917.* Short title.
2. Section 6a of *The Power Commission Act* as enacted by section 4 of *The Power Commission Act, 1916*, is amended as follows:—

Rev. Stat.  
c. 39, s. 6a  
(6 Geo. V,  
c. 19, s. 4)  
amended.

  - (a) Subsection 1.—By adding at the commencement thereof the words “The Commission, with the approval of.” Appoint-  
ment of  
comptroller.
  - (b) Subsection 2.—By striking out the word “shall” in the first line and substituting therefor the word “may” and by adding after the word “proper” in the second line the words “and as the Commission may approve,” and by striking out the words “Lieutenant-Governor in Council” in the sixth, eleventh and twelfth lines and substituting therefor the word “Commission.” Books and  
accounts.
  - (c) Subsection 5.—By striking out the words “Lieutenant-Governor in Council” in the second line and substituting therefor the words “the Commission with the approval of the Lieutenant-Governor in Council.” Vacancy  
in office.
  - (d) Subsection 7.—By inserting after the word “by” in the second line the words “the Commission, with the approval of.” Salary.

Rev. Stat.  
c. 39, s. 8,  
amended.

**3.** Section 8 of *The Power Commission Act* is amended by adding thereto the following clauses:—

Acquiring  
stock in  
develop-  
ment com-  
panies.

(g) Acquire by purchase or otherwise on any terms and hold shares in any incorporated company carrying on the business of developing, supplying or transmitting electrical power or energy; and in connection with any such acquisition enter into any covenant or covenants, agreement or agreements, and pay for any such shares either in cash or bonds, debentures or other securities of the Commission, and guarantee, or covenant or agree for or in respect of the payment or performance of any bonds, debentures, securities, contracts or obligations of any company shares in which are so acquired, or of any company shares in which are held by any company in which shares are so acquired.

Issue of  
bonds, etc.,  
to pay for  
shares.

(h) Issue bonds, debentures or other securities of the Commission for any of the purposes set out in clauses *a* to *g* in such form and containing such terms and at such rate of interest and payable in such manner and at such time or times as the Lieutenant-Governor in Council may determine.

Rev. Stat.  
c. 39,  
amended.

**4.** *The Power Commission Act* is amended by adding thereto the following section:—

Lands of  
Commission  
to be tax-  
able.

12a.—(1) Notwithstanding anything in *The Assessment Act* contained, land owned by and vested in the Commission shall be subject to assessment and taxation for municipal and school purposes at the actual value thereof according to the average value of the land in the locality.

Rev. Stat.  
c. 195.

Buildings,  
works, etc.,  
to continue  
to be  
exempt.

(2) Subsection 1 shall not apply to or include buildings, machinery, works, structures, substructures, superstructures, rails, ties, poles and other property, works or improvements owned, used or controlled by the Commission, nor an easement or the right of use or occupation or other interest in land not owned by the Commission, but all such buildings, machinery, works, structures, substructures, superstructures, rails, ties, poles and other property, works or improvements owned, used or controlled by the Commission, and every such easement or right, shall continue to be exempt from assessment and taxation as heretofore.

Rev. Stat.  
c. 39,  
amended.

**5.** *The Power Commission Act* is amended by adding thereto the following sections:—

Guarantee-  
ing bonds  
of Com-  
mission.

14.—(c) The Lieutenant-Governor in Council is hereby authorized, on such terms as may be approved by Order-in-Council, to agree to guarantee the payment of the principal and interest of any bonds, debentures and other securities issued by the

Commission, and the form and manner of any such guarantee or guarantees shall be such as the Lieutenant-Governor in Council may approve. The said guarantee or guarantees shall be signed by the Provincial Treasurer or such other officer or officers as may be designated by the Lieutenant-Governor in Council, and upon being so signed, the Province of Ontario shall become liable for the payment of the principal and interest of the bonds, debentures and securities guaranteed according to the tenor thereof, and the Lieutenant-Governor in Council is hereby authorized to make arrangements for supplying the money necessary to fulfil the requirements of the said guarantee or guarantees, and to advance the amount necessary for that purpose out of the public funds of the Province, and in the hands of any holder of or of any of such bonds, debentures or securities any guarantee so signed shall be conclusive evidence that the terms of this section have been complied with.

- 14.—(d) The Lieutenant-Governor in Council is hereby further authorized on behalf of the Province of Ontario to enter into any covenants or agreements in connection with the acquisition by the Commission of any shares in any incorporated company and to guarantee the observance and performance by the Commission of any contract or agreement of the Commission in relation to such acquisition.

Guaranteeing performance of contract for purchase of shares.

6. Subsection 8 of section 18 of *The Power Commission Act*, as enacted by section 9 of *The Power Commission Act, 1916*, is repealed, and the following substituted therefor:—

Rev. Stat. c. 39, s. 18, amended.

- (8) Notwithstanding anything in *The Municipal Act* or any general or special Act contained, debentures issued, or purporting to be issued by a municipal corporation which has entered into a contract with the Commission for a supply of electrical power or energy from the Commission for the purpose of carrying out such contract, or for constructing or equipping works for the development, transmission and distribution of electrical power or energy so supplied, shall not be included in ascertaining the limits of the borrowing powers of the corporation as prescribed by *The Municipal Act*, or such other general or special Act.

Debentures of municipality not to be included in calculating limit of indebtedness.

Rev. Stat. c. 19, s. 2.

- 7.—(1) Section 19 of *The Power Commission Act* is amended by adding thereto the following subsection:—

Rev. Stat. c. 39, s. 19, amended.

- (4) Where the trustees of a police village have entered into a contract with the Commission for the supply of electrical power or energy and have heretofore constructed, purchased or acquired or hereafter construct, purchase or acquire works for distributing electrical power or energy, and the trustees of

Extension, etc., of works in police village.

the police village desire to extend or improve such works, they may apply to the council of the township for the passing of a by-law for the issue of debentures for such extension or improvement, and the council may pass the necessary by-law for borrowing such further sums as may be necessary for such extension or improvement and for levying by an annual special rate upon the rateable property in the police village, the sums required for the payment of the debentures issued for the extension or improvements.

Assent of  
electors not  
required.

- (a) The by-law shall be approved by the Commission before the final passing thereof, but shall not require the assent of the electors.

Approval of  
Commission.

- (b) Such approval may be given if it is shown to the satisfaction of the Commission that the extension is necessary or desirable and if sufficient additional revenue will be derived therefrom to meet the annual payments in respect of the debt and the interest thereon.

5 Geo. V,  
c. 34, s. 39,  
repealed.

- (2) Section 518a of *The Municipal Act* as enacted by section 39 of *The Municipal Amendment Act, 1915*, is repealed.

Rev. Stat.  
c. 39,  
amended.

8. *The Power Commission Act* is amended by adding thereto the following section:—

Township  
distribution  
works.

- 19a.—(1) Notwithstanding anything in *The Public Utilities Act* or any other Act contained, the council of a township may pass by-laws:—

Lands and  
works.

- (a) for acquiring lands and real and personal property, and erecting, constructing and operating works for the development, transmission and distribution of electrical power or energy in the municipality;

Contract  
with Com-  
mission.

General  
powers.

- (b) for entering into a contract with the Commission with the assent of the municipal electors of the township qualified to vote on money by-laws, for the supply of electrical power or energy for the use of the municipality and the inhabitants thereof;

Rev. Stat.  
cc. 192,  
193, 204.

- (c) for exercising for the said purposes, any of the powers which may be exercised by the municipal council of a town under the authority of *The Municipal Act*, *The Local Improvement Act*, *The Public Utilities Act* or this Act.

Sectional  
township  
by-laws.

- (2) The council of a township may by by-law set apart a portion of the township as to which any of the by-laws passed under subsection 1 may have effect, and may submit the by-law for

the establishment of such works, or for entering into such contract, to the municipal electors qualified to vote on money by-laws in the part of the township so set apart.

- (3) Where the council has passed a by-law under subsection 2, the council may issue debentures for the purposes set out in subsection 1, and levy the special rate for the amounts required to be raised on account of sinking fund and interest for the payment of the said debentures, in the district so set apart. Debentures.

- (4) The council may appoint a commission for the purpose of the construction of the works and the control and management of the same for the district so set apart in the manner provided by section 34 of *The Public Utilities Act*, but the commissioners appointed shall be residents of such district and it shall not be necessary to obtain the assent of the electors to the establishment of the Commission. Commission for control and management.  
Rev. Stat. c. 204.

**9.** *The Power Commission Act* is amended by adding thereto the following section:— Rev. Stat. c. 39, amended.

- 24a.—(1) A municipal corporation which has entered into a contract with the Commission for the supply of electrical power or energy shall not pass any by-law for the issue of debentures for any extension or improvement to an electrical light, heat or power system without having first obtained the assent of the Commission to the amount of such issue and the purposes to which the same is to be applied. Debentures for extension or improvement not to be issued without approval of Commission.

- (2) Every member of the council of the municipal corporation passing a by-law in contravention of subsection 1 shall be personally responsible for any loss or expense occasioned to the corporation by such action unless he shows that he voted against the passing of such by-law or did everything in his power to prevent the passing of the same. Liability of members of council.

- (3) Every by-law passed in contravention of subsection 1 shall be illegal and void and the Commission may take the same proceedings for quashing such by-law or restraining the corporation from issuing debentures thereunder as might be taken by a ratepayer of the municipality. By-law to be void.

- (4) This section shall have effect, notwithstanding the provisions of any other general or special Act heretofore enacted relating to any municipal corporation. Section to have effect notwithstanding other enactments.

Rev. Stat.  
c. 39, s. 39,  
amended.

**10.** Section 39 of *The Power Commission Act* is amended by inserting therein, after the clause lettered (a), the following:—

Application  
of surplus  
funds in  
erection  
of office  
buildings.

(aa) In purchasing or otherwise acquiring a site and erecting thereon buildings for the occupation and use of the municipal commission as offices and for other business purposes, subject to the approval by the Commission of the site and cost and of the plans of any such building.

Erecting  
larger build-  
ing than  
required  
and leasing  
part for  
other  
utilities.

(i) Subject to such approval, any such office building may be larger than is required for the immediate use of the Municipal commission and any part of such building not immediately required for the use of the municipal commission may be leased by it to the corporation or to any other municipal commission for the purposes of any public utility in the municipality.

5 Geo. V,  
c. 19, s. 14,  
ss. 3,  
amended.

**11.** Subsection 3 of section 14 of *The Power Commission Act, 1915*, is amended by adding at the end thereof the following words, “and the Commission may take the same proceedings in respect thereto as might be taken by a ratepayer of such municipality.”

6 Geo. V,  
c. 19, s. 10,  
ss. 5,  
amended.

**12.** Subsection 5 of section 10 of *The Power Commission Act, 1916*, is amended by striking out the figure “7” in the last line thereof and substituting therefor the figure “9.”

6 Geo. V,  
c. 19, s. 12,  
repealed.

**13.** Section 12 of *The Power Commission Act, 1916*, is repealed and the following substituted therefor:—

Collection  
of moneys  
from muni-  
cipalities  
on sink-  
ing fund  
account.

12. Notwithstanding anything in *The Power Commission Act* contained, a municipal corporation which has entered into or shall hereafter enter into a contract with the Commission for a supply of power may be relieved by the Commission from payment of any sum on account of the sinking fund account for the first five years, during which payments are made to the Commission by the corporation under such contract, and the amounts required from such corporation on sinking fund account shall be payable during the then next ensuing thirty years.

Municipal  
corpora-  
tions  
added as  
parties to  
contract of  
1909.

**14.** The Municipal Corporation of the City of Sarnia, the Municipal Corporation of the Town of Dunnville, the Municipal Corporation of the Town of Forest, the Municipal Corporation of the Village of Point Edward, the Municipal Corporation of the Village of Rodney, the Municipal Corporation of the Village of Watford, the Municipal Corporation of the Village of West Lorne, the Municipal Corporation of the Village of Wyoming, the Municipal Corporation of the Police Village of Dashwood, the Municipal Corporation of the Police Village of Highgate, the Municipal Corporation of the Police Village of Zurich, the Municipal Corporation of the Police Village of Otterville, the Municipal Corpora-

tion of the Police Village of Dublin, the Municipal Corporation of the Police Village of St. Jacobs, the Municipal Corporation of the Police Village of Burgessville and the Municipal Corporation of the Police Village of Springfield are added as parties to the second part of the contract set out in Schedule "A" to *The Power Commission Act, 1909*, as varied, confirmed and amended by the said Act, and as further varied, confirmed and amended by the Act passed in the tenth year of the reign of His late Majesty King Edward VII, chaptered 16, and by subsequent Acts and by this Act, and the said contract shall be binding upon the parties thereto, respectively, as to the City of Sarnia, from the 10th day of February, 1916; as to the Town of Dunnville, from the 10th day of October, 1916; as to the Town of Forest, from the 7th day of October, 1916; as to the Village of Point Edward, from the 10th day of October, 1916; as to the Village of Rodney, from the 7th day of August, 1916; as to the Village of Watford, from the 2nd day of October, 1916; as to the Village of West Lorne, from the 9th day of September, 1916; as to the Village of Wyoming, from the 10th day of February, 1916; as to the Police Village of Dashwood, from the 23rd day of February, 1917; as to the Police Village of Highgate, from the 16th day of May, 1916; as to the Police Village of Zurich, from the 1st day of March, 1917; as to the Police Village of Otterville, from the 13th day of December, 1915; as to the Police Village of Dublin, from the 27th day of November, 1916; as to the Police Village of St. Jacobs, from the 5th day of February, 1917; as to the Police Village of Burgessville, from the 22nd day of November, 1916; and as to the Police Village of Springfield, from the 15th day of November, 1916.

**15.** The names of the said municipal corporations are added to Schedule "B" of the said contract, and such schedule shall be read as containing the particulars set out in Schedule "A" to this Act. Added to Schedule "B" to contract.

**16.** The contracts set out in Schedule "B" hereto between the Hydro-Electric Power Commission of Ontario and the Municipal Corporation of the Town of Collingwood from the 17th day of February, 1917; the Municipal Corporation of the Town of Midland, from the 14th day of February, 1917; the Municipal Corporation of the Town of Penetanguishene, from the 19th day of February, 1917; the Municipal Corporation of the Town of Stayner, from the 16th day of February, 1917; the Municipal Corporation of the Town of Barrie, from the 19th day of March, 1917; the Municipal Corporation of the Village of Creemore, from the 15th day of February, 1917; the Municipal Corporation of the Village of Coldwater, from the 20th day of February, 1917; the Municipal Corporation of the Police Village of Elmvale, from the 15th day of February, 1917, and the Municipal Corporation of the Township of Tay, from the 27th day of February, 1917, are hereby confirmed and declared to be legal and binding upon the parties thereto, respectively, from their respective dates, and shall not be open to question upon any grounds whatsoever, notwithstanding the requirements of *The Power Commission Act*, or the amendments thereto or any other statute. Contracts with Town of Collingwood, etc., confirmed. Rev. Stat. c. 39.

Contracts  
with certain  
townships  
confirmed.

**17.** The contracts set out in Schedule "C" hereto between the Hydro-Electric Power Commission of Ontario and the Municipal Corporation of the Township of Scarborough, from the 4th day of January, 1917; the Municipal Corporation of the Township of Vaughan, from the 2nd day of October, 1916; the Municipal Corporation of the Township of Townsend, from the 15th day of December, 1916; the Municipal Corporation of the Township of Dereham, from the 17th day of October, 1916; the Municipal Corporation of the Township of South Norwich, from the 23rd day of October, 1916; the Municipal Corporation of the Township of North Norwich, from the 23rd day of October, 1916; the Municipal Corporation of the Township of Chingua-cousy, from the 20th day of November, 1916; the Municipal Corporation of the Township of Biddulph, from the 15th day of November, 1916; the Municipal Corporation of the Township of Brantford, from the 4th day of October, 1915; the Municipal Corporation of the Township of Stamford, from the 12th day of March, 1916, are hereby confirmed and declared to be legal, valid and binding upon the parties hereto, respectively, from their respective dates, and shall not be open to question upon any grounds whatsoever, notwithstanding the requirements of *The Power Commission Act*, or amendments thereto, or any other statute.

Other  
contracts  
confirmed.

**18.** The contracts set out in Schedule "D," "E," "F," "G," "H," "I" and "J" hereto between the Hydro-Electric Power Commission of Ontario and the Municipal Corporation of the City of Kingston, from the 4th day of December, 1916; the Municipal Corporation of the Town of Arthur, from the 2nd day of June, 1916; the Municipal Corporation of the Village of Tara, from the 13th day of March, 1916; the Municipal Corporation of the Village of Grand Valley, from the 5th day of June, 1916; the Municipal Corporation of the Township of Artemesia, from the 18th day of February, 1916; the Municipal Corporation of the Township of Brant, from the 6th day of November, 1916, and the Municipal Corporation of the Township of Bentinck, from the 11th day of November, 1916, are hereby confirmed and declared to be legal, valid and binding upon the parties thereto respectively, from their respective dates, and shall not be open to question upon any grounds whatsoever, notwithstanding the requirements of *The Power Commission Act*, or the amendments thereto or any other statute.

Municipal  
by-laws  
confirmed.

**19.** By-laws Nos. 889 and 894 of the Corporation of the City of Sarnia; By-law No. 45 of the Corporation of the City of Kingston; By-laws Nos. 15 and 14 of the Corporation of the Town of Dunnville; By-law No. 461 of the Corporation of the Town of Forest; By-laws Nos. 605 and 607 of the Corporation of the Town of Arthur; By-law No. 873 of the Corporation of the Town of Collingwood; By-law No. 949 of the Corporation of the Town of Midland; By-law No. 535 of the Corporation of the Town of Penetanguishene; By-law No. 540 of the Corporation of the Town of Stayner; By-law No. 905 of the Corporation of the Town of Barrie; By-laws Nos. 282 and 284 of the Corporation of the Village of Tara; By-laws Nos. 187 and 192 of the Corporation of the Village of

Grand Valley; By-laws Nos. 631 and 632 of the Corporation of the Village of Point Edward; By-laws Nos. 115 and 117 of the Corporation of the Village of Rodney; By-laws Nos. 6 and 8 of the Village of Watford; By-laws Nos. 126 and 127 of the Corporation of the Village of West Lorne; By-laws Nos. 307 and 310 of the Corporation of the Village of Wyoming; By-law No. 286 of the Corporation of the Village of Creemore; By-law No. 75 of the Corporation of the Village of Coldwater; By-laws Nos. 189 and 227 of the Corporation of the Police Village of Dashwood; By-laws Nos. 575 and 576 of the Corporation of the Police Village of Highgate; By-laws Nos. 8 and 9 of the Corporation of the Police Village of Zurich; By-laws Nos. 582 and 583 of the Corporation of the Police Village of Otterville; By-laws Nos. 161 and 163 of the Corporation of the Police Village of Dublin; By-law No. 649 of the Corporation of the Police Village of St. Jacobs; By-laws Nos. 760 and 766 of the Corporation of the Police Village of Burgessville; By-laws Nos. 244 and 253 of the Corporation of the Police Village of Springfield; By-law No. 772 of the Corporation of the Police Village of Elmvale; By-laws No. 29 and 30 of the Corporation of the Township of Artemesia; By-law No. 7 of the Corporation of the Township of Bentinck; By-law No. 89 of the Corporation of the Township of Brant; By-law No. 597 of the Corporation of the Township of Tay; By-laws Nos. 925 and 932 of the Corporation of the Township of Scarboro; By-law No. 982 of the Corporation of the Township of Vaughan; By-law No. 350 of the Corporation of the Township of Townsend; By-law No. 720 of the Corporation of the Township of Dereham; By-law No. 597 of the Corporation of the Township of South Norwich; By-law No. 771 of the Corporation of the Township of North Norwich; By-law No. 470 of the Corporation of the Township of Chinguacousy; By-law No. 8 of the Corporation of the Township of Biddulph; By-law No. 698 of the Corporation of the Township of Brantford; By-laws Nos. 23 and 24 of the Township of Stamford are confirmed and declared to be legal, valid and binding upon such corporations and the ratepayers thereof, respectively, and shall not be open to question upon any grounds whatsoever, notwithstanding the requirements of *The Power Commission Act*, or the amendments thereto or of any other statute.

This Indenture, made in duplicate the seventeenth day of February, in the year of our Lord one thousand nine hundred and seventeen (1917).

Between:

The Hydro-Electric Power Commission of Ontario, hereinafter called the "Commission," party of the first part;

and

The Municipal Corporation of the Town of Collingwood, hereinafter called the "Corporation," party of the second part.

Whereas, pursuant to an Act to provide for the transmission of electrical power to municipalities, known as *The Power Commission Act* and amendments thereto, the Commission entered into an agreement with the Corporation for a supply of electrical energy, dated the twenty-fourth (24th) day of July, Nineteen hundred and twelve (1912), (and the ratepayers of the Corporation assented to the by-laws authorizing the Corporation to enter into such an agreement with the Commission for such power);

And whereas, in accordance with the powers conferred by legislation upon the Commission by the said *Power Commission Act* and amendments thereto, the Commission purchased the generating station, hydraulic plant and all works in connection with same belonging to the Simcoe Railway and Power Company, located at what is known as the Big Chute on the Severn River, and all of the transmission lines, sub-stations and transmission equipment also belonging to the said Simcoe Railway and Power Company between the said generating station and the Town of Midland;

And whereas, the purchase of such generating station hydraulic plant, works, transmission lines, sub-stations and all properties belonging to the said Simcoe Railway and Power Company was made for the purpose of supplying to better advantage and with greater efficiency the power requirements of the various municipalities located in the surrounding and adjacent district:

And whereas, in order to comply with such changed conditions it is the desire of both parties that it be declared that the said agreement, dated July 24th, 1912, be terminated and superseded by this agreement as hereinafter set out;

And whereas, the electors of the Corporation assented to by By-law No. 873, authorizing the Corporation to enter into such an agreement:

1. Now therefore this indenture witnesseth, that in consideration of the premises and of the agreements of the Corporation herein set forth, subject to the provisions of the said Act and amendments thereto, the Commission and the Corporation mutually agree with each other as follows:

2. The Commission agrees:

(a) To reserve and deliver at the earliest possible date one thousand (1,000) h.p. or more of electrical power to the Corporation.

(b) At the expiration of reasonable notice in writing, which may be given by the Corporation from time to time during the continuance of this agreement, to reserve and deliver to the Corporation additional electric power when called for.

(c) To use at all times first-class, modern, standard commercial apparatus and plant, and to exercise all due skill and diligence so as to secure satisfactory operation of the plant and apparatus of the Corporation.

(d) To deliver commercially continuous 24-hour power every day in the year to the Corporation at the distribution bus bars in the Commission's sub-station within the Corporation's limits.

3. The Corporation agrees:

(a) To use all diligence by every lawful means in its power to prepare for the receipt and use of the power dealt with by this agreement so as to be able to receive power when the Commission is ready to deliver same.

(b) To pay annually interest at rate payable by the Commission upon the Corporation's proportionate part (based on the quantity of electrical energy or power taken) of all moneys expended by the Commission on capital account for the acquiring of properties and rights, the acquiring and construction of generating plants, transformer stations, transmission lines, distributing stations and other works necessary for the delivery of said electrical energy or power to the Corporation under the terms of this contract.

Also to pay an annual sinking fund instalment of such an amount as to form at the end of 30 years, with accrued interest, a sinking fund sufficient to repay the Corporation's proportionate part, based as aforesaid, of all moneys advanced by the Province of Ontario for the acquiring of properties and rights, the acquiring and construction of generating plants, transformer stations, transmission lines, distributing stations and other works necessary for the delivery of said electrical energy or power, delivered to the Corporation under the terms of this contract.

Also to pay the Corporation's proportionate part, based as aforesaid, of the cost of lost power and the cost of generating, maintaining, repairing, renewing and insuring said generating plants, transformer stations, transmission lines, distributing stations and other necessary works. Subject to adjustment under Clause 7 of this agreement.

(c) The amounts payable under this contract shall be paid in twelve monthly payments, in gold coin of the present standard of weight and fineness, at the offices of the Commission at Toronto. Bills shall be rendered by the Commission on or before the 5th day of each month and paid by the Corporation on or before the 15th day of each month. If any bill remains unpaid for fifteen days, the Commission may, in addition to all other remedies and without notice, discontinue the supply of power to the Corporation until such bill is paid. No such discontinuance shall relieve the Corporation from the performance of the covenants, provisoes and conditions herein contained. All payments in arrears shall bear interest at the legal rate.

(d) To take electric power exclusively from the Commission during the continuance of this agreement.

(e) To co-operate by all means in its power at all times with the Commission to increase the quantity of power required from the Commission, and in all other respects to carry out the objects of this agreement and of the said Act.

(f) To pay for three-fourths of the power ordered from time to time by the Corporation and held in reserve for it as herein provided, whether it takes the same or not. When the highest average amount of power taken for any twenty consecutive minutes during any month shall exceed during the twenty consecutive minutes three-fourths of the amount ordered by the Corporation and held in reserve, then the Corporation shall pay for this greater amount during the entire month.

(g) If the Corporation during any month takes more than the amount of power ordered and held in reserve for it, as determined by an integrated peak, or highest average, for a period of twenty consecutive minutes, the taking of such excess shall thereafter constitute an obligation on the part of the Corporation to pay for, and on the part of the Commission to hold in reserve, such increased quantity of power in accordance with the terms and conditions of this contract.

(h) When the power factor at any time falls below ninety per cent. (90%) the Corporation shall pay for ninety per cent. (90%) of the kilovolt amperes, providing that said ninety per cent. (90%) of said kilovolt amperes is greater than the maximum kilowatts for any twenty (20) minute period during the month.

(i) To use at all times first-class, modern, standard commercial apparatus and plant, to be approved by the Commission.

(j) To exercise all due skill and diligence so as to secure satisfactory operation of the plant and apparatus of the Commission and of the Corporation.

4. This agreement shall remain in force for thirty (30) years from the date of execution and completion thereof, subject to Section 10 hereof.

5. (a) The power shall be alternating, three-phase, having a periodicity of approximately sixty (60) cycles per second and shall be delivered as aforesaid at a voltage suitable for local distribution.

(b) That the meters with their series and potential transformers shall be connected at the point of delivery.

(c) That the maintenance by the Commission of approximately the agreed voltage at approximately the agreed frequency at the sub-station in the limits of the Corporation shall constitute the supply of all power involved herein and the fulfilment of all operating obligations hereunder, and when the voltage and frequency are so maintained, the amount of power, its fluctuations, load factor, power factor, distribution as to phases and all other electrical characteristics, and qualities are under the sole control of the Corporation, their agents, customers, apparatus, appliances and circuits.

6. The Engineers of the Commission, or one or more of them, or any other person or persons appointed for this purpose by the Commission, shall have the right from time to time during the continuance of this agreement to inspect the apparatus, plant and property of the Corporation and take records at all reasonable hours.

7. The Commission shall at least annually adjust and apportion the amount or amounts payable by the Municipal Corporation or Corporations for such power and such interest, sinking fund, cost of lost power and cost of generating, operating, maintaining, repairing, renewing and insuring said works.

If at any time any other Municipal Corporation, or pursuant to said Act any railway or distributing company, or any other Corporation or person, applies to the Commission for a supply of power, the Commission shall notify the applicant and the involved Corporation or Corporations in writing, of a time and place to hear all representations that may be made as to the terms and conditions for such supply.

Without discrimination in favour of the applicants as to the price to be paid, for equal quantities of power, the Commission may supply power upon such terms and conditions as may, having regard to the risk and expense incurred and paid, and to be paid by the Corporation, appear equitable to the Commission and are approved by the Lieutenant-Governor in Council.

No such application shall be granted if the said works or any part thereof are not adequate for such supply, or if the supply of the Corporation will be thereby injuriously affected, and no power shall be supplied within the limits of a Municipal Corporation taking power from the Commission at the time of such application without the written consent of such Corporation.

In determining the quantity of power supplied to a Municipal Corporation, the quantity supplied by the Commission within the limits of the Corporation to any applicant, other than a Municipal Corporation, shall be computed as part of the quantity supplied to such Corporation, but such Corporation shall not be liable for payment for any portion of the power so supplied. No power shall be supplied by the Municipal Corporation to any railway or distributing company without the written consent of the Commission. Power shall not be sold for less than the cost, and there shall be no discrimination as regards price and quantity.

8. It is hereby declared that the Commission is to be a trustee of all property held by the Commission under this agreement for the Corporation or Corporations supplied by the Commission, but the Commission shall be entitled to a lien upon said property for all moneys expended by the Commission under this agreement and not repaid. At the expiration of this agreement the Commission shall determine and adjust the rights of the Corporation and any other (if any) supplied by the Commission, having regard to the amounts paid by them respectively under the terms of this agreement, and such other considerations as may appear equitable to the Commission and are approved by the Lieutenant-Governor in Council.

9. If differences arise between Corporations to which the Commission is supplying power, the Commission may, upon application, fix a time and place to hear all representations that may be made by the parties, and the Commission shall, in a summary manner, when possible, adjust such differences and such adjustment shall be final.

The Commission shall have all the powers that may be conferred upon a Commissioner appointed under the Act respecting Enquiries Concerning Public Matters.

10. Notwithstanding anything herein contained to the contrary, it is hereby understood and agreed that this agreement shall come into effect upon the date of its approval by the Lieutenant-Governor in Council, or its ratification by the Legislature of the Province of Ontario, and that the said agreement between the parties hereto bearing date the.....day of.....19 , shall thereupon be terminated and become of no effect and be superseded by this agreement.

11. This agreement shall extend to, be binding upon, and enure to the benefit of the successors and assigns of the parties hereto.

In witness whereof the Commission and the Corporation have respectively affixed their corporate seals and the hands of their proper officers.

HYDRO-ELECTRIC POWER COMMISSION OF ONTARIO.

---

## SCHEDULE "C."

This Agreement made this fourth day of January, A.D. 1917.

Between:

The Hydro-Electric Power Commission of Ontario, herein called the "Commission," party of the first part,

and

The Municipal Corporation of the Township of Scarborough, herein called the "Corporation," party of the second part.

Whereas pursuant to an Act to provide for the transmission of electrical power to municipalities, the Corporation applied to the Commission for a supply of power;

And whereas the Commission has entered into contracts with the Ontario Power Company of Niagara Falls (hereinafter called the Company), for such power;

And whereas the Corporation under the provisions of *The Power Commission Act* and amendments thereto and *The Power Commission Act* of 1911, being "An Act to Provide for the Local Distribution of Electrical Power," has, at the request of a number of ratepayers (petitioners) applied to the Commission for a supply of electrical power or energy, and has passed a by-law, No. 925, to authorize the execution of an agreement therefor.

1. Now therefore this indenture witnesseth that in consideration of the premises and of the agreements of the Corporation set forth, subject to the provisions of said Act and amendments and of the said contract, the Commission agrees with the Corporation:

(a) To reserve and deliver at the earliest possible date electrical power to the Corporation as required by the Corporation.

(b) At the expiration of thirty (30) days notice in writing, which may be given by the Corporation from time to time during the continuance of this agreement, to reserve and deliver to the Corporation additional electrical power as may be required from time to time.

(c) To use at all times first-class, modern, standard, commercial apparatus and plant, and to exercise due skill and diligence so as to secure the most perfect operation of the plant and apparatus of the Corporation.

(d) Power shall be delivered to the Corporation at approximately 2,200 or 4,000 volts, or at any other primary voltage that may be available for the Corporation's use.

(e) To supply and construct all 2,200, 4,000 or other lines at primary voltage made necessary by contracts for electric service made between the Corporation and residents or users, within the township, from the Commis-

sion's transformer station or stations to the service transformers of the Corporation, located at such points as the Commission may approve.

2. In consideration of the premises and of the covenants and agreements herein set forth, the Corporation agrees with the Commission:—

(a) To use all diligence by every lawful means in its power to prepare for the receipt and use of the power dealt with by this agreement, so as to be able to give notice as specified in paragraph 1 (b).

(b) Subject to the provisions of paragraph 2 (g) herein, to pay to the Commission monthly, for all power taken, the cost of the power delivered to the Commission, plus the charges in connection with the delivery of the power to the municipality as outlined in clauses 2 (c) and (d).

(c) To pay, annually, in twelve monthly instalments, interest upon its proportionate part of the moneys expended by the Commission on capital account for the construction of lines, transformer stations and other necessary works for the delivery of power to the Corporation; to pay an annual sum for its proportionate part of the cost of the said construction, so as to form in thirty years a sinking fund for the retirement of securities issued by the Province of Ontario; and to bear its proportionate part of the line loss and pay its proportionate part of the cost to operate, maintain, repair, renew and insure the said lines, stations and works. All payments under this paragraph shall be subject to adjustment under paragraph 7.

(d) In addition to the cost of power, and the cost of delivering it to the Corporation as provided for in paragraphs 2 (b) and (c), to pay to the Commission in half-yearly instalments, interest and sinking fund on a thirty-year basis on all capital invested by the Commission in 2,200, 4,000 or other lines of primary voltage as provided for in paragraph 1 (e), and to maintain, repair, renew and operate the said lines, and set apart a depreciation fund at the rate of 5 per cent. per annum on all capital expended by the Commission on such construction.

(e) The amounts payable in accordance with clause 2 (b), and (c) and (d) shall be paid in gold coin of the present standard of weight and fineness, at the office of the Commission at Toronto, and bills shall be rendered by the Commission on or before the 5th day and paid by the Corporation on or before the 15th day of each month, except that payments under clause 2 (d) shall be made half yearly. If any bill remains unpaid for fifteen days, the Commission may, in addition to all other remedies and without notice, discontinue the supply of power to the Corporation until the said bill is paid. No such discontinuance shall relieve the Corporation from the performance of the covenants, provisoes and conditions herein contained. All payments in arrears shall bear interest at the legal rate.

(f) To take power exclusively from the Commission during the continuance of this agreement.

(g) To pay for three-fourths of the power ordered from time to time by the Corporation and held in reserve for it as herein provided, whether it takes the same or not. When the highest average amount of power taken for any twenty consecutive minutes during any month shall exceed during

the twenty consecutive minutes three-fourths of the amount ordered by the Corporation and held in reserve; then the Corporation shall pay for this greater amount during the entire month.

If the Corporation during any month takes more than the amount of power ordered and held in reserve for it, as determined by an integrated peak, or highest average, for a period of twenty consecutive minutes, the Corporation shall pay for this greater amount of power during the entire month. The taking of such excess shall thereafter constitute an obligation on the part of the Corporation to pay for and on the part of the Commission to hold in reserve an additional block of power in accordance with the terms and conditions of this contract.

When the power factor of the greatest amount of power taken for said twenty consecutive minutes falls below 90 per cent. the Corporation shall pay for 90 per cent. of said power divided by the power factor.

(h) To use at all times first-class, modern, standard, commercial apparatus and plant to be approved by the Commission and to exercise all due skill and diligence so as to secure the most perfect operation of the plant and apparatus of the Commission and of the Company.

(i) To co-operate, by all means in its power, at all times, with the Commission, to increase the quantity of power required from the Commission and in all other respects to carry out the objects of this agreement and of the said Act.

3. If, as therein provided, the said contracts are continued until the 19th day of December, 1939, this agreement shall remain in force until that date.

4. The power shall be three-phase alternating commercially continuous twenty-four hour power every day of the year except as provided in paragraph 6, having a periodicity of approximately 25 cycles per second, and shall be delivered as aforesaid at a voltage suitable for distribution within the municipality.

(a) That the meters with their series and potential transformers shall be connected at the point of delivery, and shall be subject to test as to accuracy by either party hereto.

(b) The maintenance by the Commission of approximately the agreed voltage at approximately the agreed frequency at the point of delivery to the Corporation shall constitute the supply of all power involved herein and the fulfilment of all operating obligations hereunder; and when voltage and frequency are so maintained, the amount of the power, its fluctuations, load factor, power factor, distribution as to phases, and all other electric characteristics and qualities are under the sole control of the Corporation, their agents, customers, apparatus, appliances and circuits.

5. The Engineers of the Commission, or one or more of them, or any other person or persons appointed for this purpose by the Commission, shall have the right from time to time during the continuance of this agreement, to inspect the apparatus, plant and property of the Corporation and take records at all reasonable hours.

6. In case the Commission should at any time or times be prevented from supplying said power, or any part thereof, or in case the Corporation shall at any time be prevented from taking said power, or any part thereof, by strike, lock-out, fire, invasion, explosion, act of God, or the King's enemies, or any other cause reasonably beyond their control, then the Commission shall not be bound to deliver such power during such time, and the Corporation shall not be bound to pay the price of said power, during such time.

7. The Commission shall at least annually adjust and apportion the amounts payable by municipal corporations for such power and such interest, sinking fund, line loss, and cost of operating, maintaining, repairing, renewing and insuring the line and works.

8. It is hereby declared that the Commission is to be a trustee of all property held by the Commission under this agreement for the Corporation and other municipal corporations supplied by the Commission, but the Commission shall be entitled to a lien upon said property for all moneys expended by the Commission under this agreement and not repaid. At the expiration of this agreement the Commission shall determine and adjust the rights of the Corporation and other municipal corporations, supplied by the Commission, having regard to the amounts paid by them, respectively, under the terms of this agreement, and such other considerations, as may appear equitable to the Commission and are approved by the Lieutenant-Governor in Council.

9. If at any time any other municipal corporation, or pursuant to said Act, any railway or distributing company, or any other corporation or person, applies to the Commission for a supply of power, the Commission shall notify the applicant and the Corporation in writing, of a time and place and hear all representations that may be made as to the terms and conditions for such supply.

Without discrimination in favour of the applicants as to the price to be paid, for equal quantities of power, the Commission may supply power upon such terms and conditions as may, having regard to the risk and expense incurred, and paid, and to be paid by the Corporation, appear equitable to the Commission, and are approved by the Lieutenant-Governor in Council.

10. In case any municipal corporation, or any person, firm or corporation which shall contract with the Commission or with any municipal corporation for a supply of power furnished to the Commission by the Company shall suffer damages by the act or neglect of the Company, and such municipal corporation, person, firm or corporation would, if the Company had made the said contracts directly with them, have had a right to recover such damages or commence any proceedings or any other remedy, the Commission shall be entitled to commence any such proceedings to bring such action for or on behalf of such municipal corporation, person, firm or corporation, and notwithstanding any act, decision or rule of law to the contrary, the Commission shall be entitled to all the rights and remedies of such municipal corporation, person, firm or corporation, including the right to recover such damages, but no action shall be brought by the Commission until such municipal corporation, person, firm or corporation shall have agreed with the Commission to pay any costs that may be adjudged to be paid if such proceedings or action is unsuccessful. The rights and remedies of any such municipal corporation, person, firm or corporation shall not be hereby prejudiced.

11. If any differences arise between Corporations to whom the Commission is supplying power, the Commission may upon application fix a time and place to hear all representations that may be made by the parties, and the Commission shall, in a summary manner when possible, adjust such differences and such adjustment shall be final.

The Commission shall have all the powers that may be conferred upon a Commissioner appointed under the *Act respecting Enquiries concerning Public Matters*.

12. This agreement shall extend to, be binding upon and enure to the benefit of the successors and assigns of the parties hereto.

In witness whereof the Commission and the Corporation have respectively affixed their corporate seals and the hands of their proper officers.

## SCHEDULE "D."

This Indenture made in duplicate the 4th day of December, in the year of our Lord one thousand nine hundred and sixteen (1916).

Between

The Hydro-Electric Power Commission of Ontario, hereinafter called the "Commission," party of the first part,

and

The Municipal Corporation of the City of Kingston, hereinafter called the "Corporation," party of the second part.

Whereas, by the *Power Commission Act*, passed by the Legislature of the Province of Ontario, Revised Statutes of Ontario, 1914, Chapter 39, and amendments thereto, it was, amongst other things, enacted that any municipal corporation might apply to the Hydro-Electric Power Commission of Ontario for the transmission to such Corporation of electric power and energy for the use of the Corporation and the inhabitants thereof for lighting, heating and power purposes;

And whereas the Corporation has applied to the Commission for a supply of electrical power or energy;

And whereas the Commission is in possession of, and operating in trust for the Ontario Government, the power developments known as the Central Ontario System and can supply therefrom electrical energy sufficient for the needs of the Corporation;

And whereas the electors of the Corporation assented to by-laws authorizing the Corporation to enter into a contract with the Commission for such power;

Now therefore this indenture witnesseth that in consideration of the premises and of the agreements of the parties hereto each agree with the other as follows:

1. The Commission agrees:

(a) To reserve for and deliver to the Corporation one thousand two hundred (1,200) or more horse-power of electrical power or energy at the point of delivery hereinafter specified.

(b) To reserve and deliver to the Corporation additional electrical power at the expiration of reasonable notice in writing, which may be given by the Corporation from time to time during the continuance of this agreement.

(c) To use at all times first-class, modern, standard, commercial apparatus and plant and to exercise all due skill and diligence so that the service rendered to the Corporation hereunder shall be satisfactory.

(d) To deliver commercially continuous twenty-four (24) hour power every day in the year, except as provided for herein, at the point of delivery, herein defined as the low tension outlets of the Commission's substation, which the Commission proposes to erect in the City of Kingston.

2. The Corporation agrees:

(a) To use all diligence by every lawful means in its power to prepare for the receipt and use of the power covered by this agreement, so as to be able to receive power on the date of delivery.

(b) To pay to the Commission for all power taken or held in reserve in monthly payments in gold coin at Toronto under the following schedule of rates:

For 1,200 h.p. and up to 2,500 h.p., at the rate of \$28.00 per h.p. per annum.

When the amount of power taken and held in reserve for the Corporation increases to 2,500 h.p., the rate for all power shall be \$27.00 per h.p. per annum; and

When the said power increases to 3,000 h.p., the rate for all power shall be \$26.00 per h.p. per annum;

When the said power increases to 3,500 h.p., the rate for all power shall be \$25.00 per h.p. per annum;

When the said power increases to 4,000 h.p., the rate for all power shall be \$24.00 per h.p. per annum.

Each month's payments are to be made as though the maximum amount taken during that month was taken for the whole month, save that paragraph (d) hereof shall govern the minimum.

(c) If the Corporation during any month takes more than the amount of power ordered and held in reserve for it for twenty (20) consecutive minutes, the taking of such excess power shall thereafter constitute an obligation on the part of the Corporation to pay for, and on the part of the Commission, as long as this greater amount does not exceed the maximum hereunder, to hold in reserve such increased quantity of power in accordance with the terms and conditions of this agreement.

(d) To pay each month to the Commission as a minimum for seventy-five per cent. (75%) of the power held in reserve for the Corporation at the rate fixed herein except as provided for in Clause 5 (b) hereof.

(e) At all times to take and use the three-phase power in such a manner that the current will be equally taken from the three phases and in no case shall the difference between any two phases be greater than ten per cent. (10%).

(f) At all times to so take and use the three-phase power that the ratio of the kilowatts to the kilovolt-amperes is a maximum, but in any event the customer shall pay for at least ninety per cent. (90%) of the maximum kilovolt-amperes considered as true power or kilowatts. The maximum demand in kilovolt-amperes or kilowatts shall be taken as the maximum average or integrated demand over any twenty consecutive minutes.

One horse-power is defined as 0.746 kilowatts.

One kilowatt is defined as the produce of the instantaneous current, voltage and power-factor of the load as shown by a standard polyphase watt-meter and divided by 1,000.

One kilovolt-ampere is defined as the product of the simultaneous average current per phase times the average voltage between phases, times 1,732 and divided by 1,000.

For the purposes of this agreement the kilovolt-amperes may be determined either directly by current and voltage measurements or by the kilowatts divided by the power factor or by any other commercially accurate means as may be approved by the Commission.

The power factor is defined as kilowatts divided by kilovolt-amperes.

(g) Bills shall be rendered by the Commission to the Corporation on or before the tenth day, and paid by the Corporation on or before the twentieth day of each calendar month.

If any bill remains unpaid for fifteen (15) days after the date thereof the Commission may, in addition to all other remedies, and without notice, discontinue the supply of power to the Corporation until the said bill is paid, and no such discontinuance by the Commission shall relieve the Corporation from the performance of the covenants, provisoes and conditions herein contained.

All payments in arrears shall bear interest at the legal rate.

(h) To use at all times modern, standard, commercial apparatus and plant to be approved by the Commission from time to time, and to so operate and conduct the plant and apparatus as to cause minimum disturbances or fluctuations to the Commission's supply, and to exercise all due skill and diligence so as to secure the satisfactory operation of the plant and apparatus of both the Commission and the Corporation.

(i) Should it be expedient or necessary for the Commission, in order to deliver power hereunder, to construct or build poles, lines, cables, transformers, switches or other appliances or devices on, over or through the property of the Corporation, the Corporation hereby agrees to supply and arrange for such necessary rights-of-way free of cost, and satisfactory to the Commission for the life of this agreement, or renewals thereof, and for thirty (30) days thereafter, so that the Commission may build, erect, construct, operate, repair, maintain and remove any of said apparatus or devices belonging to the Commission.

The power delivered hereunder shall be alternating, three-phase, having a periodicity of approximately 60 cycles per second and a pressure of approximately 2,300 volts between phase wires, subject to normal variations in both frequency and voltage.

4. (a) Measurement of the power held in reserve or taken by the Corporation hereunder shall be made by means of a standard polyphase Graphic Recording Wattmeter, and other meters as required, so arranged as to accurately measure and record the power taken by the Corporation.

The greatest average or integrated power demand made by the Corporation for twenty (20) consecutive minutes in any month, as shown by the aforementioned instruments, shall be used as a basis of billing and paying for the power taken by the Corporation hereunder.

(b) The point of measuring the power covered by this agreement shall be as near as possible to the point of delivery, and the instruments, with the necessary current and potential transformers for the measurement of power hereunder shall be provided, installed and maintained correct by the Commission.

(c) Whenever the said measuring instruments are connected at other than the point of delivery their reading shall be subject to a correction and shall be corrected to give a reading such as would be obtained by instruments connected at the point of delivery. Such corrections shall be based upon tests or calculations by the Commission.

(d) Should the point of measurement be located on the premises of the Corporation no rental charge shall be made to the Commission for the location of said instruments or transformers on the Corporation's premises.

(e) Access to said instruments and transformers belonging to the Commission shall be free to the Commission at any and all times and the Commission may test, calibrate or remove said measuring instruments and transformers at any reasonable time, but when possible the Corporation shall be advised at least seven days in advance of the Commission's intention to recalibrate, remove or change the measuring instruments.

(f) The Corporation shall have the right to test any such measuring instruments in the presence of a representative of the Commission, by giving to the Commission seven days' previous notice in writing of its desire to test such measuring instruments.

(g) The Commission shall repair or replace and re-test defective meters or measuring equipment within a reasonable time, but, during the time there is no meter in service it shall be assumed that the power consumed is the same as for the other days of the same month on which a similar load existed.

(h) The Corporation shall be responsible for any damage to the property or apparatus furnished by the Commission for the purpose of supplying or measuring power hereunder and installed on the Corporation's property, providing such damage originates from a source external to the said apparatus of the Commission, and is not due to defects in the apparatus of the Commission.

5. (a) The maintenance by the Commission of approximately the agreed voltage at approximately the agreed frequency at the point of delivery shall constitute the supply of power involved herein and a fulfilment of all the operating obligations hereunder, and when the voltage and frequency are so maintained the amount of power, its fluctuations, load factor, power factor, distribution as to phases, and all other characteristics and qualities are under the sole control of the Corporation, his agents, apparatus, appliances and circuits.

(b) In case the Commission shall at any time or times be prevented from delivering said power or any part thereof by strikes, lockouts, riot, fire, invasion, explosion, act of God, the King's enemies, or any other cause or causes reasonably beyond its control, then the Commission shall not be bound to deliver such power during such time and the Corporation shall not be bound to pay for such power during such time.

(c) The Commission shall be prompt and diligent in removing the cause of such interruption, but the Corporation shall not be bound to pay for such

power during such time. As soon as the cause of such interruption is removed the Commission shall, without any delay, deliver the said power as aforesaid, and the Corporation shall take and use the same.

(d) It is further agreed hereby that the Commission shall have the right at reasonable times, and when possible after due notice has been given to the Corporation, to discontinue the supply of power to the Corporation for the purpose of safeguarding life or property, or for the purpose of making repairs, renewals, or replacements to the lines or apparatus of the Commission, but all such interruptions shall be of a minimum duration and when possible arranged for at a time least objectionable to the Corporation.

Such interruptions shall not release the Corporation from its obligations to pay for or resume the use of power when service is restored.

6. A representative or engineer of the Commission appointed for this purpose, may, at any reasonable time during the continuance of this agreement, have access to the premises of the Corporation for the purpose of inspecting the electrical apparatus, plant or property of the Corporation and to take records therefrom as required.

7. It is mutually agreed:

That this agreement shall be binding upon both parties hereto for a period of twenty (20) years, beginning on the day and date when power is first taken hereunder, and this agreement may be extended for a further term of five (5) years upon the mutual agreement of both parties hereto before three (3) months of the expiration of this agreement or any extension or renewal period.

8. The Commission shall be entitled at the termination of this agreement or any extension thereof, or within thirty (30) days thereafter, to remove from the Corporation's premises any and all plant or equipment which may have been installed by the Commission for the supply or measurement of power hereunder.

In witness whereof the said Commission and the said Corporation have duly affixed their respective seals and signatures of their respective officers this fourth day of December, A.D. one thousand nine hundred and sixteen (1916).

## SCHEDULE "E."

This Indenture made in Duplicate the 2nd day of June, in the year of our Lord, one thousand, nine hundred and sixteen.

Between

The Hydro-Electric Power Commission of Ontario, hereinafter called the "Commission," party of the first part;

and

The Municipal Corporation of the Town of Arthur, hereinafter called the "Corporation," party of the second part.

Whereas, pursuant to "An Act to Provide for the Transmission of Electrical Power to Municipalities, known as the *Power Commission Act* and amendments thereto," the Corporation applied to the Commission for a supply of power, and the Commission furnished the Corporation with estimates of the total cost of such power, ready for distribution within the limits of the Corporation (and the electors of the Corporation assented to the by-laws authorizing the Corporation to enter into a contract with the Commission for such power).

1. Now therefore this indenture witnesseth that in consideration of the premises and of the agreement of the Corporation herein set forth, subject to the provisions of the said Act and amendments thereto, the Commission agrees with the Corporation:

(a) To reserve and deliver at the earliest possible date 150 h.p. or more of electrical power to the Corporation.

(b) At the expiration of reasonable notice in writing which may be given by the Corporation from time to time during the continuance of this agreement, to reserve and deliver to the Corporation additional electric power when called for.

(c) To use at all times first-class, modern, standard commercial apparatus and plant, and to exercise all due skill and diligence so as to secure satisfactory operation of the plant and apparatus of the Corporation.

(d) To deliver commercially continuous 24-hour power every day in the year to the Corporation at the distribution bus bars in the Commission's sub-station located at Grand Valley.

2. In consideration of the premises and of the agreement herein set forth, the Corporation agrees with the Commission—

(a) To use all diligence by every lawful means in its power to prepare for the receipt and use of the power dealt with by this agreement so as to be able to receive power when the Commission is ready to deliver same.

(b) To pay annually, interest at rate payable by the Commission upon the Corporation's proportionate part (based on the quantity of electrical

energy or power taken), of all the moneys expended by the Commission on capital account for the acquiring of properties and rights, the acquiring and construction of generating plants, transformer stations, transmission lines, distributing stations, and other works necessary for the delivery of said electrical energy or power to the Corporation under the terms of this contract.

Also to pay an annual sinking fund instalment of such amount as to form at the end of 30 years, with accrued interest, a sinking fund sufficient to repay the Corporation's proportionate part, based as aforesaid, of all moneys advanced by the Province of Ontario for the acquiring of properties and rights, the acquiring and construction of generating plants, transformer stations, transmission lines, distributing stations and other works necessary for the delivery of said electrical energy or power, delivered to the Corporation under the terms of this contract. Also to pay the Corporation's proportionate part, based as aforesaid, of the cost of lost power and the cost of generating, maintaining, repairing, renewing and insuring said generating plants, transformer stations, transmission lines, distributing stations and other necessary works, subject to adjustment under Clause 6 of this agreement.

(c) The amounts payable under this contract shall be paid in twelve monthly payments, in gold coin of the present standard weight and fineness, at the offices of the Commission at Toronto. Bills shall be rendered by the Commission on or before the 5th day and paid by the Corporation on or before the 15th day of each month. If any bill remains unpaid for fifteen days, the Commission may, in addition to all other remedies and without notice, discontinue the supply of power to the Corporation until said bill is paid. No such discontinuance shall relieve the Corporation from the performance of the covenants, provisoes and conditions herein contained. All payments in arrears shall bear interest at the legal rate.

(d) To take electric power exclusively from the Commission during the continuance of this agreement.

(e) To co-operate by all means in its power at all times with the Commission to increase the quantity of power required from the Commission, and in all other respects to carry out the objects of this agreement, and of the said Act.

(f) To pay for three-fourths of the power ordered from time to time by the Corporation and held in reserve for it as herein provided, whether it takes the same or not. When the highest average amount of power taken for any twenty consecutive minutes during any month shall exceed during the twenty consecutive minutes three-fourths of the amount ordered by the Corporation and held in reserve, then the Corporation shall pay for this greater amount during the entire month.

(g) If the Corporation during any month takes more than the amount of power ordered and held in reserve for it, as determined by an integrated peak, or highest average, for a period of twenty consecutive minutes, the taking of such excess shall thereafter constitute an obligation on the part of the Corporation to pay for, and on the part of the Commission to hold in reserve, such increased quantity of power in accordance with the terms and conditions of this contract.

(h) When the power factor of the highest average amount of power taken for said twenty consecutive minutes falls below 90% the Corporation shall pay for 90% of said power divided by the power factor.

(i) To use at all times first-class, modern, standard commercial apparatus and plant, to be approved by the Commission.

(j) To exercise all due skill and diligence so as to secure satisfactory operation of the plant and apparatus of the Commission and of the Corporation.

3. This agreement shall remain in force for thirty years from date of the first delivery of power under this contract.

4. The power shall be alternating, three-phase, having a periodicity of approximately 60 cycles per second, and shall be delivered as aforesaid at a voltage suitable for local distribution.

(a) That the meters with their series and potential transformers shall be connected at the point of delivery at the Commission's substation located at Grand Valley.

(b) The maintenance by the Commission of approximately the agreed voltage at approximately the agreed frequency at the Commission's substation at Grand Valley shall constitute the supply of all power involved herein and the fulfilment of all operating obligations hereunder, and when voltage and frequency are so maintained, the amount of power, its fluctuations, load factor, power factor, distribution as to phases and all other electric characteristics and qualities, are under the sole control of the Corporation, their agents, customers, apparatus, appliances and circuits.

5. The engineers of the Commission, or one or more of them, or any other person or persons appointed for this purpose by the Commission, shall have the right from time to time during the continuance of this agreement, to inspect the apparatus, plant and property of the Corporation and take records at all reasonable hours.

6. The Commission shall at least annually adjust and apportion the amount or amounts payable by the Municipal Corporation or Corporations for such power and such interest, sinking fund, cost of lost power and cost of generating, operating, maintaining, repairing, renewing and insuring said works.

If at any time any other Municipal Corporation, or pursuant to said Act, any railway or distributing company, or any other Corporation or person, applies to the Commission for a supply of power, the Commission shall notify the applicant and the involved Corporation or Corporations in writing, of a time and place to hear all representations that may be made as to the terms and conditions for such supply.

Without discrimination in favour of the applicants as to the price to be paid, for equal quantities of power, the Commission may supply power upon such terms and conditions as may, having regard to the risk and expense incurred, and paid, and to be paid by the Corporation, appear equitable to the Commission, and are approved by the Lieutenant-Governor in Council.

No such application shall be granted if the said works or any part thereof are not adequate for such supply, or if the supply of the Corporation will be thereby injuriously affected, and no power shall be supplied within the limits of a Municipal Corporation taking power from the Commission at the time of such application, without the written consent of such Corporation.

In determining the quantity of power supplied to a Municipal Corporation, the quantity supplied by the Commission within the limits of the Corporation to any applicant, other than a Municipal Corporation, shall be computed as part of the quantity supplied to such Corporation, but such Corporation shall not be liable for payment for any portion of the power so supplied. No power shall be supplied by the Municipal Corporation to any railway or distributing company without the written consent of the Commission. Power shall not be sold for less than the cost, and there shall be no discrimination as regards price and quantity.

7. It is hereby declared that the Commission is to be a trustee of all property held by the Commission under this agreement for the Corporation or Corporations supplied by the Commission, but the Commission shall be entitled to a lien upon said property for all moneys expended by the Commission under this agreement and not repaid. At the expiration of this agreement the Commission shall determine and adjust the rights of the Corporation and any other (if any) supplied by the Commission, having regard to the amounts paid by them respectively under the terms of this agreement and such other considerations as may appear equitable to the Commission and are approved by the Lieutenant-Governor in Council.

8. If differences arise between Corporations to which the Commission is supplying power, the Commission may upon application fix a time and place and hear all representations that may be made by the parties, and the Commission shall, in a summary manner, when possible, adjust such differences, and such adjustment shall be final. The Commission shall have all the powers that may be conferred upon a Commissioner appointed under the Act respecting Enquiries Concerning Public Matters.

9. This agreement shall extend to, be binding upon, and enure to the benefit of the successors and assigns of the parties hereto.

In witness whereof the Commission and the Corporation have respectively affixed their corporate seals and the hands of their proper officers.

HYDRO-ELECTRIC POWER COMMISSION OF ONTARIO.

## SCHEDULE "F."

This indenture made in duplicate the thirteenth day of March in the year of our Lord, One thousand nine hundred and sixteen.

Between

The Hydro-Electric Power Commission of Ontario, hereinafter called the "Commission," party of the first part;

and

The Municipal Corporation of the Village of Tara, hereinafter called the "Corporation," party of the second part.

Whereas, pursuant to "An Act to provide for the Transmission of Electrical power to Municipalities, known as *The Power Commission Act*, and amendments thereto," the Corporation applied to the Commission for a supply of power, and the Commission furnished the Corporation with estimates of the total cost of such power, ready for distribution within the limits of the Corporation (and the electors of the Corporation consented to the By-laws authorizing the Corporation to enter into a contract with the Commission for such power).

1. Now therefore this indenture witnesseth that in consideration of the premises and of the agreement of the Corporation herein set forth, subject to the provisions of the said Act and amendments thereto, the Commission agrees with the Corporation:

(a) To reserve and deliver at the earliest possible date 100 h.p. or more of electrical power to the Corporation.

(b) At the expiration of reasonable notice in writing, which may be given by the Corporation from time to time during the continuance of this agreement, to reserve and deliver to the Corporation additional electric power when called for.

(c) To use at all times first-class, modern, standard commercial apparatus and plant, and to exercise all due skill and diligence so as to secure satisfactory operation of the plant and apparatus of the Corporation.

(d) To deliver commercially continuous 24-hour power every day in the year to the Corporation at the distribution bus bars in the Commission's substation within the Corporation's limits.

2. In consideration of the premises and of the agreement herein set forth, the Corporation agrees with the Commission—

(a) To use all diligence by every lawful means in its power to prepare for the receipt and use of the power dealt with by this agreement so as to be able to receive power when the Commission is ready to deliver same.

(b) To pay annually, interest at rate payable by the Commission upon the Corporation's proportionate part (based on the quantity of electrical

energy or power taken), of all moneys expended by the Commission on capital account for the acquiring of properties and rights, the acquiring and construction of generating plants, transformer stations, transmission lines, distributing stations, and other works necessary for the delivery of said electrical energy or power to the Corporation under the terms of this contract.

Also to pay an annual sinking fund instalment of such amount as to form at the end of 30 years, with accrued interest, a sinking fund sufficient to repay the Corporation's proportionate part, based as aforesaid, of all moneys advanced by the Province of Ontario for the acquiring of properties and rights, the acquiring and construction of generating plants, transformer stations, transmission lines, distributing stations and other works necessary for the delivery of said electrical energy or power, delivered to the Corporation under the terms of this contract. Also to pay the Corporation's proportionate part, based as aforesaid, on the cost of lost power and of the cost of operating, maintaining, repairing, renewing and insuring said generating plants, transformer stations, transmission lines, distributing stations and other necessary works, subject to adjustment under Clause 6 of this agreement.

(c) The amounts payable under this contract shall be paid in twelve monthly payments, in gold coin of the present standard of weight and fineness, at the offices of the Commission at Toronto. Bills shall be rendered by the Commission on or before the 5th day and paid by the Corporation on or before the 15th day of each month. If any bill remains unpaid for fifteen days, the Commission may, in addition to all other remedies and without notice, discontinue the supply of power to the Corporation until said bill is paid. No such discontinuance shall relieve the Corporation from the performance of the covenants, provisoes and conditions herein contained. All payments in arrears shall bear interest at the legal rate.

(d) To take electric power exclusively from the Commission during the continuance of this agreement.

(e) To co-operate by all means in its power at all times with the Commission to increase the quantity of power required from the Commission, and in all other respects to carry out the objects of this agreement, and of the said Act.

(f) To pay for three-fourths of the power ordered from time to time by the Corporation and held in reserve for it as herein provided, whether it takes the same or not. When the highest average amount of power taken for any twenty consecutive minutes during any month shall exceed during the twenty consecutive minutes three-fourths of the amount ordered by the Corporation and held in reserve, then the Corporation shall pay for this greater amount during the entire month.

(g) If the Corporation during any month takes more than the amount of power ordered and held in reserve for it, as determined by an integrated peak, or highest average, for a period of twenty consecutive minutes, the taking of such excess shall thereafter constitute an obligation on the part of the Corporation to pay for, and on the part of the Commission to hold in reserve, such increased quantity of power in accordance with the terms and conditions of this contract.

(h) When the power factor of the highest average amount of power taken for said twenty consecutive minutes falls below 90% the Corporation shall pay for 90% of said power divided by the power factor.

(i) To use at all times first-class, modern, standard commercial apparatus and plant, to be approved by the Commission.

(j) To exercise all due skill and diligence so as to secure satisfactory operation of the plant and apparatus of the Commission and of the Corporation.

3. This agreement shall remain in force for thirty years from date of the first delivery of power under this contract.

4. The power shall be alternating, three-phase, having a periodicity of approximately 60 cycles per second, and shall be delivered as aforesaid at a voltage suitable for local distribution.

(a) That the meters with their series and potential transformers shall be connected at the point of delivery.

(b) The maintenance by the Commission of approximately the agreed voltage at approximately the agreed frequency at the substation in the limits of the Corporation shall constitute the supply of all power involved herein and the fulfilment of all operating obligations hereunder, and when voltage and frequency are so maintained, the amount of power, its fluctuations, load factor, power factor, distribution as to phases and all other electric characteristics and qualities, are under the sole control of the Corporation, their agents, customers, apparatus, appliances and circuits.

5. The engineers of the Commission, or one or more of them, or any other person or persons appointed for this purpose by the Commission, shall have the right from time to time during the continuance of this agreement, to inspect the apparatus, plant and property of the Corporation and take records at all reasonable hours.

6. The Commission shall at least annually adjust and apportion the amount or amounts payable by the Municipal Corporation or Corporations for such power and such interest, sinking fund, cost of lost power and cost of generating, operating, maintaining, repairing, renewing and insuring said works.

If at any time any other Municipal Corporation, or pursuant to said Act, any railway or distributing company, or any other Corporation or person, applies to the Commission for a supply of power, the Commission shall notify the applicant and the involved Corporation or Corporations in writing, of a time and place to hear all representations that may be made as to the terms and conditions for such supply.

Without discrimination in favour of the applicants as to the price to be paid, for equal quantities of power, the Commission may supply power upon such terms and conditions as may, having regard to the risk and expense incurred, and paid, and to be paid by the Corporation, appear equitable to the Commission, and are approved by the Lieutenant-Governor in Council.

No such application shall be granted if the said works or any part thereof are not adequate for such supply, or if the supply of the Corporation will be thereby injuriously affected, and no power shall be supplied within the limits of a Municipal Corporation taking power from the Commission at the time of such application, without the written consent of such Corporation.

In determining the quantity of power supplied to a Municipal Corporation, the quantity supplied by the Commission within the limits of the Corporation to any applicant, other than a Municipal Corporation, shall be computed as part of the quantity supplied to such Corporation, but such Corporation shall not be liable for payment for any portion of the power so supplied. No power shall be supplied by the Municipal Corporation to any railway or distributing company without the written consent of the Commission. Power shall not be sold for less than the cost, and there shall be no discrimination as regards price and quantity.

7. It is hereby declared that the Commission is to be a trustee of all property held by the Commission under this agreement for the Corporation or Corporations supplied by the Commission, but the Commission shall be entitled to a lien upon said property for all moneys expended by the Commission under this agreement and not repaid. At the expiration of this agreement the Commission shall determine and adjust the rights of the Corporation and any other (if any) supplied by the Commission, having regard to the amounts paid by them respectively under the terms of this agreement and such other considerations as may appear equitable to the Commission and are approved by the Lieutenant-Governor in Council.

8. If differences arise between Corporations to which the Commission is supplying power, the Commission may upon application fix a time and place and hear all representations that may be made by the parties, and the Commission shall, in a summary manner, when possible, adjust such differences, and such adjustment shall be final. The Commission shall have all the powers that may be conferred upon a Commissioner appointed under the Act respecting Enquiries Concerning Public Matters.

9. This agreement shall extend to, be binding upon, and enure to the benefit of the successors and assigns of the parties hereto.

In witness whereof the Commission and the Corporation have respectively affixed their corporate seals and the hands of their proper officers.

## SCHEDULE "G."

This Indenture made in duplicate the fifth day of June, in the year of our Lord, One thousand nine hundred and sixteen.

Between

The Hydro-Electric Power Commission of Ontario, hereinafter called the "Commission," party of the first part;

and

The Municipal Corporation of the Village of Grand Valley, hereinafter called the "Corporation," party of the second part.

Whereas, pursuant to "An Act to provide for the Transmission of Electrical power to Municipalities, known as *The Power Commission Act*, and amendments thereto," the Corporation applied to the Commission for a supply of power, and the Commission furnished the Corporation with estimates of the total cost of such power, ready for distribution within the limits of the Corporation (and the electors of the Corporation assented to the By-laws No. 187 and 192, authorizing the Corporation to enter into a contract with the Commission for such power).

1. Now therefore this indenture witnesseth that in consideration of the premises and of the agreement of the Corporation herein set forth, subject to the provisions of the said Act and amendments thereto, the Commission agrees with the Corporation:

(a) To reserve and deliver at the earliest possible date 100 h.p. or more of electrical power to the Corporation.

(b) At the expiration of reasonable notice in writing, which may be given by the Corporation from time to time during the continuance of this agreement, to reserve and deliver to the Corporation additional electric power when called for.

(c) To use at all times first-class, modern, standard commercial apparatus and plant, and to exercise all due skill and diligence so as to secure satisfactory operation of the plant and apparatus of the Corporation.

(d) To deliver commercially continuous 24-hour power every day in the year to the Corporation at the distribution bus bars in the Commission's sub-station within the Corporation's limits.

2. In consideration of the premises and of the agreement herein set forth, the Corporation agrees with the Commission:

(a) To use all diligence by every lawful means in its power to prepare for the receipt and use of the power dealt with by this agreement, so as to be able to receive power when the Commission is ready to deliver same.

(b) To pay annually, interest at rate payable by the Commission upon the Corporation's proportionate part (based on the quantity of electrical

energy or power taken), of all moneys expended by the Commission on capital account for the acquiring of properties and rights, the acquiring and construction of generating plants, transformer stations, transmission lines, distributing stations, and other works necessary for the delivery of said electrical energy or power to the Corporation under the terms of this contract.

Also to pay an annual sinking fund instalment of such amount as to form at the end of thirty years, with accrued interest, a sinking fund sufficient to repay the Corporation's proportionate part, based as aforesaid, of all moneys advanced by the Province of Ontario for the acquiring of properties and rights, the acquiring and construction of generating plants, transformer stations, transmission lines, distributing stations and other works necessary for the delivery of said electrical energy or power, delivered to the Corporation under the terms of this contract. Also to pay the Corporation's proportionate part, based as aforesaid, on the cost of lost power and of the cost of operating, maintaining, repairing, renewing and insuring said generating plants, transformer stations, transmission lines, distributing stations and other necessary works, subject to adjustment under Clause 6 of this agreement.

(c) The amounts payable under this contract shall be paid in twelve monthly payments, in gold coin of the present standard of weight and fineness, at the offices of the Commission at Toronto. Bills shall be rendered by the Commission on or before the 5th day and paid by the Corporation on or before the 15th day of each month. If any bill remains unpaid for fifteen days, the Commission may, in addition to all other remedies and without notice, discontinue the supply of power to the Corporation until said bill is paid. No such discontinuance shall relieve the Corporation from the performance of the covenants, provisoes and conditions herein contained. All payments in arrears shall bear interest at the legal rate.

(d) To take electric power exclusively from the Commission during the continuance of this agreement.

(e) To co-operate by all means in its power at all times with the Commission to increase the quantity of power required from the Commission, and in all other respects to carry out the objects of this agreement, and of the said Act.

(f) To pay for three-fourths of the power ordered from time to time by the Corporation and held in reserve for it as herein provided, whether it takes the same or not. When the highest average amount of power taken for any twenty consecutive minutes during any month shall exceed during the twenty consecutive minutes three-fourths of the amount ordered by the Corporation and held in reserve, then the Corporation shall pay for this greater amount during the entire month.

(g) If the Corporation during any month takes more than the amount of power ordered and held in reserve for it, as determined by an integrated peak, or highest average, for a period of twenty consecutive minutes, the taking of such excess shall thereafter constitute an obligation on the part of the Corporation to pay for, and on the part of the Commission to hold in reserve, such increased quantity of power in accordance with the terms and conditions of this contract.

(h) When the power factor of the highest average amount of power taken for said twenty consecutive minutes falls below 90% the Corporation shall pay for 90% of said power divided by the power factor.

(i) To use at all times first-class, modern, standard commercial apparatus and plant, to be approved by the Commission.

(j) To exercise all due skill and diligence so as to secure satisfactory operation of the plant and apparatus of the Commission and of the Corporation.

3. This agreement shall remain in force for thirty years from date of the first delivery of power under this contract.

4. The power shall be alternating, three-phase, having a periodicity of approximately 60 cycles per second, and shall be delivered as aforesaid at a voltage suitable for local distribution.

(a) That the meters with their series and potential transformers shall be connected at the point of delivery.

(b) The maintenance by the Commission of approximately the agreed voltage at approximately the agreed frequency at the substation in the limits of the Corporation shall constitute the supply of all power involved herein and the fulfilment of all operating obligations hereunder, and when voltage and frequency are so maintained, the amount of power, its fluctuations, load factor, power factor, distribution as to phases and all other electric characteristics and qualities, are under the sole control of the Corporation, their agents, customers, apparatus, appliances and circuits.

5. The Engineers of the Commission, or one or more of them, or any other person or persons appointed for this purpose by the Commission, shall have the right from time to time during the continuance of this agreement, to inspect the apparatus, plant and property of the Corporation and take records at all reasonable hours.

6. The Commission shall at least annually adjust and apportion the amount or amounts payable by the Municipal Corporation or Corporations for such power and such interest, sinking fund, cost of lost power and cost of generating, operating, maintaining, repairing, renewing and insuring said works.

If at any time any other Municipal Corporation, or pursuant to said Act, any railway or distributing company, or any other Corporation or person, applies to the Commission for a supply of power, the Commission shall notify the applicant and the involved Corporation or Corporations in writing, of a time and place to hear all representations that may be made as to the terms and conditions for such supply.

Without discrimination in favour of the applicants as to the price to be paid, for equal quantities of power, the Commission may supply power upon such terms and conditions as may, having regard to the risk and expense incurred, and paid, and to be paid by the Corporation, appear equitable to the Commission, and are approved by the Lieutenant-Governor in Council.

No such application shall be granted if the said works or any part thereof are not adequate for such supply, or if the supply of the Corporation will be thereby injuriously affected, and no power shall be supplied within the limits of a Municipal Corporation taking power from the Commission at the time of such application, without the written consent of such Corporation.

In determining the quantity of power supplied to a Municipal Corporation, the quantity supplied by the Commission within the limits of the Corporation to any applicant, other than a Municipal Corporation, shall be computed as part of the quantity supplied to such Corporation, but such Corporation shall not be liable for payment for any portion of the power so supplied. No power shall be supplied by the Municipal Corporation to any railway or distributing company without the written consent of the Commission. Power shall not be sold for less than the cost, and there shall be no discrimination as regards price and quantity.

7. It is hereby declared that the Commission is to be a trustee of all property held by the Commission under this agreement for the Corporation or Corporations supplied by the Commission, but the Commission shall be entitled to a lien upon said property for all moneys expended by the Commission under this agreement and not repaid. At the expiration of this agreement the Commission shall determine and adjust the rights of the Corporation and any other (if any) supplied by the Commission, having regard to the amounts paid by them respectively under the terms of this agreement and such other considerations as may appear equitable to the Commission and are approved by the Lieutenant-Governor in Council.

8. If differences arise between Corporations to which the Commission is supplying power, the Commission may upon application fix a time and place and hear all representations that may be made by the parties, and the Commission shall, in a summary manner, when possible, adjust such differences, and such adjustment shall be final. The Commission shall have all the powers that may be conferred upon a Commissioner appointed under the Act respecting Enquiries Concerning Public Matters.

9. This agreement shall extend to, be binding upon, and enure to the benefit of the successors and assigns of the parties hereto.

In witness whereof the Commission and the Corporation have respectively affixed their corporate seals and the hands of their proper officers.

## SCHEDULE "H."

This Agreement made this 18th day of February, A.D. 1916.

Between:

The Hydro-Electric Power Commission of Ontario, herein called the "Commission," party of the First Part;

and

The Municipal Corporation of the Township of Artemesia, herein called the "Corporation," party of the Second Part.

Whereas pursuant to an Act to provide for the transmission of electrical power to the municipalities the Corporation applied to the Commission for a supply of power;

And whereas the Corporation under the provisions of *The Power Commission Act* and amendments thereto, and *The Power Commission Act of 1911, being "An Act to provide for the Local Distribution of Electrical Power,"* has, at the request of a number of ratepayers (petitioners) applied to the Commission for a supply of electrical power or energy, and has passed a By-law No. 30 to authorize the execution of an agreement therefor;

1. Now therefore this indenture witnesseth that in consideration of the premises and of the agreements of the Corporation set forth, subject to the provisions of said Act and amendments and of the said contract, the Commission agrees with the Corporation:—

(a) To reserve and deliver at the earliest possible date electrical power to the Corporation as required by the Corporation.

(b) At the expiration of thirty (30) days' notice in writing which may be given by the Corporation from time to time during the continuance of this agreement, to reserve and deliver to the Corporation additional electrical power as may be required from time to time.

(c) To use at all times first-class, modern, standard commercial apparatus and plant, and to exercise due skill and diligence so as to secure the most perfect operation of the plant and apparatus of the Corporation.

(d) Power shall be delivered to the Corporation at approximately 2,200 or 4,000 volts, or at any other primary voltage that may be available for the Corporation's use.

(e) To supply and construct all 2,200, 4,000 or other lines at primary voltage made necessary by contracts for electric service made between the Corporation and residents or users within the township, from the Commission's power station or transformer stations to the service transformers of the Corporation located at such points as the Commission may approve, except in those parts of the township known as Eugenia and Ceylon.

2. In consideration of the premises and of the covenants and agreements herein set forth, the Corporation agree with the Commission:—

(a) To use all diligence by every lawful means in its power to prepare for the receipt and use of the power dealt with by this agreement, so as to be able to give notice as specified in paragraph 1 (b).

(b) Subject to the provisions of paragraph (g) herein, to pay the Commission monthly for all power taken, the cost of the power to be delivered by the Commission plus the charges in connection with the delivery of power to the municipality, as outlined in clause 2 (c) and (d).

(c) To pay annually interest at the rate payable by the Commission upon the Corporation's proportionate part (based on the quantity of electrical energy or power taken), of all moneys expended by the Commission on capital account for the acquiring of properties and rights, and acquiring and construction of generating plants, transformer stations, transmission lines, distributing stations and other works necessary for the delivery of said electrical energy or power to the Corporation under the terms of this contract. Also to pay an annual sinking fund instalment of such amounts as to form at the end of thirty (30) years with accrued interest a sinking fund sufficient to repay the Corporation's proportionate part, based as aforesaid, of all moneys advanced by the Province of Ontario for the acquiring of properties and rights, the acquiring and construction of generating plant, transformer stations, transmission lines, distributing stations and other works necessary for delivery of said electrical energy or power delivered to the Corporation under the terms of this contract. Also to pay the Corporation's proportionate part, based as aforesaid, on the cost of lost power and of the cost of operating, maintaining, repairing, renewing and insuring said generating plants, transformer stations, transmission lines, distributing stations and other necessary works. Subject to adjustment under clause 8 of this agreement.

(d) In addition to the cost of power and cost of delivering it to the Corporation, as provided for in paragraph 2 (b) and (c), to pay to the Commission in half-yearly instalments interest and sinking fund on a thirty (30) year basis on all capital invested by the Commission in 2,200 volt, 4,000 volt or other lines of primary voltages as provided for in paragraph 1 (e), and to maintain, repair, renew and operate the said lines and set aside a depreciation fund at the rate of 5% per annum on all capital expended by the Commission on such construction.

The payments covering cost of construction of primary lines as outlined in this clause 2 (d) shall not apply to the portions of the township known as Eugenia and Ceylon, and the capital cost of all primary and secondary distribution lines in these two localities, including all meters, transformers and other equipment necessary for the distribution systems shall be borne entirely by the Corporation, but shall be constructed by the Commission and the Corporation shall make payment to the Commission within thirty (30) days after rendering of account covering moneys spent by the Commission on construction of said primary and secondary distribution lines including all meters, transformers and other necessary equipment as mentioned above, comprising said distribution systems in Eugenia and Ceylon.

(e) The amounts payable in accordance with clauses 2 (b), (c) and (d) shall be paid in gold coin of the present standard of weight and fineness, at the office of the Commission at Toronto, and bills shall be rendered by

the Commission on or before the 5th day and paid by the Corporation on or before the 15th day of each month, except that payments under clause 2 (d) shall be made half-yearly. If any bill remains unpaid for 15 days the Commission may, in addition to all other remedies, and without notice, discontinue the supply of power to the Corporation until said bill is paid. No such discontinuance shall relieve the Corporation from the performance of the covenants, provisoes and conditions herein contained, and payments in arrears shall bear interest at the legal rate.

(f) To take power exclusively from the Commission during the continuance of this agreement.

(g) To pay for three-fourths of the power ordered from time to time by the Corporation and held in reserve for it as herein provided, whether it takes same or not. When the highest average amount of power taken for any twenty consecutive minutes during any month shall exceed during twenty consecutive minutes three-fourths of the amount of power ordered by the Corporation and held in reserve, then the Corporation shall pay for this greater amount during the entire month. If the Corporation during any month takes more than the amount of power ordered and held in reserve for it, as determined by an integrated peak, or the highest average for a period of twenty consecutive minutes, the Corporation shall pay for this greater amount of power during the entire month. The taking of such excess shall therefore constitute an obligation on the part of the Corporation to pay for and on the part of the Commission to hold in reserve an additional block of power in accordance with the terms and conditions of this agreement.

When the power factor of the highest amount of power taken for said twenty consecutive minutes falls below 90% the Corporation shall pay for 90% of the said power factor divided by the power factor.

(h) To use at all times first-class, modern, standard commercial apparatus, and plant to be approved by the Commission, and to exercise all due skill and diligence so as to secure the most perfect operation of the plant and apparatus of the Commission and of the Company.

(i) To co-operate, by all means in its power, at all times, with the Commission, to increase the quantity of power required from the Commission and in all other respects to carry out the objects of this agreement and of the said Act.

3. This agreement shall remain in force for thirty (30) years from the date of the first delivery of power hereunder.

4. The power shall be three-phase, alternating commercially continuous twenty-four hour power every day of the year, except as provided in paragraph 6, having a periodicity of approximately 60 cycles per second, and shall be delivered as aforesaid at a voltage suitable for distribution within the municipality.

(a) That the meters with their series and potential transformers shall be connected at the point of delivery, and shall be subject to test as to accuracy by either party hereto.

(b) The maintenance by the Commission of approximately the agreed voltage at approximately the agreed frequency at the point of delivery

to the Corporation shall constitute the supply of all power involved herein and the fulfilment of all operating obligations hereunder; and when voltage and frequency are so maintained, the amount of power, its fluctuations, load factor, power factor, distribution as to phases, and all other electric characteristics and qualities are under the sole control of the Corporation, their agents, customers, apparatus, appliances and circuits.

5. The engineers of the Commission, or one or more of them or any other person or persons appointed for this purpose by the Commission, shall have the right from time to time during the continuance of this agreement, to inspect the apparatus, plant and property of the Corporation and take records at all reasonable hours.

6. In case the Commission should at any time or times be prevented from supplying said power, or any part thereof, or in case the Corporation shall at any time be prevented from taking said power, or any part thereof, by strike, lock-out, fire, invasion, explosion, act of God, or the King's enemies, or any other cause reasonably beyond their control, then the Commission shall not be bound to deliver such power during such times, and the Corporation shall not be bound to pay the price of said power, during such time.

7. The Commission shall at least annually adjust and apportion the amounts payable by municipal corporations for such power and such interest, sinking fund, line loss, and cost of operating, maintaining, repairing, renewing and insuring the lines and works.

8. It is hereby declared that the Commission is to be a trustee of all property held by the Commission under this agreement for the Corporation and other municipal corporations supplied by the Commission, but the Commission shall be entitled to a lien upon said property for all moneys expended by the Commission under this agreement and not repaid. At the expiration of this agreement the Commission shall determine and adjust the rights of the Corporation and other municipal corporations supplied by the Commission, having regard to the amounts paid by them respectively, under the terms of this agreement, and such other considerations, as may appear equitable to the Commission and are approved by the Lieutenant-Governor in Council.

9. If at any time any other municipal corporation or pursuant to said Act, any railway or distributing company, or any other corporation or person, applies to the Commission for a supply of power, the Commission shall notify the applicant and the Corporation in writing, of a time and place and hear all representations that may be made as to the terms and conditions for such supply.

Without discrimination in favor of the applicants as to the price to be paid, for equal quantities of power, the Commission may supply power upon such terms and conditions as may, having regard to the risk and expense incurred, and paid, and to be paid by the Corporation, appear equitable to the Commission, and are approved by the Lieutenant-Governor in Council.

10. In case any municipal corporation, or any person, firm or corporation which shall contract with the Commission or with any municipal corporation for a supply of power furnished to the Commission by the

Company shall suffer damages by the act of neglect of the Company, and such municipal corporation, person, firm or corporation would, if the Company had made the said contracts directly with them have had a right to recover such damages or commence any proceedings or any other remedy, the Commission shall be entitled to commence any such proceedings to bring such action for or on behalf of such municipal corporation, person, firm or corporation, and notwithstanding any act, decision or rule of law to the contrary, the Commission shall be entitled to all the rights and remedies of such municipal corporation, person, firm or corporation, including the right to recover such damages, but no action shall be brought by the Commission until such municipal corporation, person, firm or corporation shall have agreed with the Commission to pay any costs that may be adjudged to be paid if such proceedings or action are unsuccessful. The rights and remedies of any such municipal corporation, person, firm or corporation shall not be hereby prejudiced.

11. If differences arise between corporations to whom the Commission is supplying power, the Commission may, upon application fix a time and place to hear all representations that may be made by the parties and the Commission shall, in a summary manner when possible, adjust such differences and such adjustment shall be final.

The Commission shall have all the powers that may be conferred upon a Commission appointed under *The Act respecting Enquiries Concerning Public Matters*.

12. This agreement shall extend to, be binding upon and enure to the benefit of the successors and assigns of the parties hereto.

In witness whereof the Commission and the Corporation have respectively affixed their corporate seals and the hands of their proper officers.

HYDRO-ELECTRIC POWER COMMISSION OF ONTARIO,

---

## SCHEDULE "I."

This agreement made this 6th day of November, A.D. 1916,

Between:

The Hydro-Electric Power Commission of Ontario, herein called the "Commission," party of the First Part;

and

The Municipal Corporation of the Township of Brant in the County of Bruce, herein called the "Corporation," party of the Second Part.

Whereas, pursuant to an Act to provide for the transmission of electrical power to the municipalities, the Corporation applied to the Commission for a supply of power.

And whereas the Corporation, under the provisions of *The Power Commission Act* and amendments thereto, and *The Power Commission Act of 1911*, being "an Act to provide for the Local Distribution of Electrical Power," has, at the request of a number of ratepayers (petitioners), applied to the Commission for a supply of electrical power or energy, and has passed a by-law, No. 89, to authorize the execution of an agreement therefor.

1. Now therefore this indenture witnesseth that in consideration of the premises and of the agreements of the Corporation set forth, subject to the provisions of said Act and amendments, and of the said contract, the Commission agrees with the Corporation:—

(a) To reserve and deliver at the earliest possible date electrical power to the Corporation, as required by the Corporation.

(b) At the expiration of thirty (30) days' notice in writing, which may be given by the Corporation from time to time during the continuance of this agreement, to reserve and deliver to the Corporation additional electrical power as may be required from time to time.

(c) To use at all times first-class, modern, standard commercial apparatus and plant, and to exercise due skill and diligence so as to secure the most perfect operation of the plant and apparatus of the Corporation.

(d) Power shall be delivered to the Corporation at approximately 2,200 or 4,000 volts, or at any other primary voltage that may be available for the Corporation's use.

(e) To supply and construct all 2,200 volt, 4,000 volt or other lines at primary voltage made necessary by contracts for electric service made between the Corporation and residents or users within the township, from the Commission's power station or transformer stations to the service transformers of the Corporation located at such points as the Commission may approve, except in that part of the township known as Elmwood, and it is hereby understood and agreed upon by both parties hereto that all the cost of the primary, secondary and street lighting, distribution systems located within the hamlet of Elmwood and upon the streets of same, shall

be paid for direct by the Corporation, including all meters, transformers, services, street lighting brackets, poles, wires, cross arms, and any equipment necessary to serve the consumers within the said hamlet of Elmwood.

2. In consideration of the premises and of the covenants and agreements herein set forth, the Corporation agrees with the Commission:—

(a) To use all diligence by every lawful means in its power to prepare for the receipt and use of the power dealt with by this agreement, so as to be able to give notice as specified in paragraph 1 (b).

(b) Subject to the provisions of clause (g), section 2 herein, to pay the Commission monthly for all power taken, the cost of the power to be delivered by the Commission, plus the charges in connection with the delivery of power to the municipality, as outlined in clauses 2 (c) and (d).

(c) To pay annually interest at the rate payable by the Commission upon the Corporation's proportionate part (based on the quantity of electrical energy or power taken), of all moneys expended by the Commission on capital account for the acquiring of properties and rights, and acquiring and construction of generating plants, transformer stations, transmission lines, distributing stations and other works necessary for the delivery of said electrical energy or power to the Corporation under the terms of this contract. Also to pay an annual sinking fund instalment of such amount as to form at the end of thirty (30) years, with accrued interest, a sinking fund sufficient to repay the Corporation's proportionate part, based as aforesaid, of all moneys advanced by the Province of Ontario for the acquiring of properties and rights, the acquiring and construction of generating plant, transformer stations, transmission lines, distributing stations and other works necessary for delivery of said electrical energy or power delivered to the Corporation under the terms of this contract. Also to pay the Corporation's proportionate part, based as aforesaid, of the cost of lost power and of the cost of operating, maintaining, repairing, renewing and insuring said generating plants, transformer stations, transmission lines, distributing stations, and other necessary works. Subject to adjustment under clause 8 of this agreement.

(d) In addition to the cost of power and cost of delivering it to the Corporation, as provided for in paragraph 2 (b) and (c), to pay to the Commission in half-yearly instalments interest and sinking fund on a thirty (30) year basis on all capital invested by the Commission in 2,200 volt, 4,000 volt, or other lines of primary voltage as provided for in paragraph 1 (e), and to maintain, repair, renew and operate the said lines and set aside a depreciation fund at the rate of 5 per cent. per annum on all capital expended by the Commission on such construction.

The payments covering cost of construction of primary lines as outlined in this clause 2 (d) shall not apply to the portion of the township known as Elmwood, and the capital cost of all primary, secondary and street lighting and distribution lines in this locality, including all meters, transformers, and other necessary equipment for the distribution system, shall be borne entirely by the Corporation, but shall be constructed by the Commission and the Corporation shall make payment to the Commission within thirty (30) days after rendering of account covering moneys spent by the Commission on construction of said primary, secondary, and street

lighting distribution lines, including all meters, transformers and other necessary equipment as mentioned above, comprising the said distribution system in the hamlet of Elmwood.

(e) The amounts payable in accordance with clauses 2 (b), (c) and (d) shall be paid in gold coin of the present standard of weight and fineness, at the office of the Commission at Toronto, and bills shall be rendered by the Commission on or before the 5th day and paid by the Corporation on or before the 15th day of each month, except that payments under clause 2 (d) shall be made half-yearly. If any bill remains unpaid for 15 days the Commission may, in addition to all other remedies, and without notice, discontinue the supply of power to the Corporation until said bill is paid. No such discontinuance shall relieve the Corporation from the performance of the covenants, provisoes and conditions herein contained, and payments in arrears shall bear interest at the legal rate.

(f) To take power exclusively from the Commission during the continuance of this agreement.

(g) To pay for three-fourths of the power ordered from time to time by the Corporation and held in reserve for it as herein provided, whether it takes same or not. When the highest average amount of power taken for any twenty (20) consecutive minutes during any month shall exceed during twenty (20) consecutive minutes three-fourths of the amount of power ordered by the Corporation and held in reserve, then the Corporation shall pay for this greater amount during the entire month. If the Corporation during any month takes more than the amount of power ordered and held in reserve for it, as determined by an integrated peak, or the highest average for a period of twenty (20) consecutive minutes, the Corporation shall pay for this greater amount of power during the entire month. The taking of such excess shall therefore constitute an obligation on the part of the Corporation to pay for and on the part of the Commission to hold in reserve, an additional block of power in accordance with the terms and conditions of this agreement.

When the power factor at any time falls below ninety per cent. (90%), the Corporation shall pay for ninety per cent. (90%) of the kilovolt amperes, providing that said ninety per cent. (90%) of said kilovolt amperes is greater than the maximum kilowatt for any twenty (20) minute period during the month.

(h) To use at all times first-class, modern, standard, commercial apparatus and plant to be approved by the Commission and to exercise all due skill and diligence so as to secure the most perfect operation of the plant and apparatus of the Commission and of the Corporation.

(i) To co-operate by all means in its power, at all times, with the Commission, to increase the quantity of power required from the Commission and in all other respects to carry out the objects of this agreement and of the said Act.

3. This agreement shall remain in force for thirty (30) years from the date of the first delivery of power hereunder.

4. The power shall be three-phase, alternating commercially continuous twenty-four hour power every day of the year, except as provided in

paragraph 6, having a periodicity of approximately 60 cycles per second, and shall be delivered as aforesaid at a voltage suitable for distribution within the municipality.

(a) That the meters with their series and potential transformers shall be connected at the point of delivery, and shall be subject to test as to accuracy by either party hereto.

(b) The maintenance by the Commission of approximately the agreed voltage at approximately the agreed frequency at the point of delivery to the Corporation shall constitute the supply of all power involved herein and the fulfilment of all operating obligations hereunder; and when voltage and frequency are so maintained, the amount of power, its fluctuations, load factor, power factor, distribution as to phases, and all other electric characteristics and qualities are under the sole control of the Corporation, their agents, customers, apparatus, appliances and circuits.

5. The Engineers of the Commission, or one or more of them, or any other person or persons appointed for this purpose by the Commission, shall have the right, from time to time during the continuance of this agreement, to inspect the apparatus, plant and property of the Corporation and take records at all reasonable hours.

6. In case the Commission should at any time or times be prevented from supplying said power, or any part thereof, or in case the Corporation shall at any time be prevented from taking said power, or any part thereof, by strike, lock-out, fire, invasion, explosion, act of God, or the King's enemies, or any other cause reasonably beyond their control, then the Commission shall not be bound to deliver such power during such times, and the Corporation shall not be bound to pay the price of said power, during such times.

7. The Commission shall at least annually adjust and apportion the amounts payable by municipal corporations for such power and such interest, sinking fund, line loss, and cost of operating, maintaining, repairing, renewing and insuring the lines and works.

8. It is hereby declared that the Commission is to be a trustee of all property held by the Commission under this agreement for the Corporation and other municipal corporations supplied by the Commission, but the Commission shall be entitled to a lien upon said property upon all moneys expended by the Commission under this agreement and not repaid. At the expiration of this agreement the Commission shall determine and adjust the rights of the Corporation and other municipal corporations supplied by the Commission, having regard to the amounts paid by them respectively, under the terms of this agreement, and such other considerations, as may appear equitable to the Commission and are approved by the Lieutenant-Governor in Council.

9. If at any time any other municipal corporation or pursuant to said Act, any railway or distributing company, or any other corporation or person, applies to the Commission for a supply of power, the Commission shall notify the applicant and the corporation in writing, of a time and place and hear all representations that may be made as to the terms and conditions for such supply.

Without discrimination in favour of the applicants as to the price to be paid, for equal quantities of power, the Commission may supply power upon such terms and conditions as may, having regard to the risk and expense incurred, and paid, and to be paid by the Corporation, appear equitable to the Commission, and are approved by the Lieutenant-Governor in Council.

10. If differences arise between corporations to whom the Commission is supplying power, the Commission may, upon application, fix a time and place to hear all representations that may be made by the parties and the Commission shall, in a summary manner, when possible, adjust such differences and such adjustment shall be final.

The Commission shall have all the powers that may be conferred upon a Commissioner appointed under *The Act respecting Enquiries Concerning Public Matters*.

11. This agreement shall extend to, be binding upon and enure to the benefit of the successors and assigns of the parties hereto.

In witness whereof the Commission and the Corporation have respectively affixed their corporate seals and the hands of their proper officers.

---

#### SCHEDULE "J."

This Agreement made this 11th day of November, A.D. 1916,

Between:

The Hydro-Electric Power Commission of Ontario, herein called the  
"Commission," party of the First Part.

and

The Municipal Corporation of the Township of Bentinck in the County  
of Grey, herein called the "Corporation," party of the Second Part.

Whereas, pursuant to an Act to provide for the Transmission of Electrical Power to the Municipalities, the Corporation applied to the Commission for a supply of power;

And whereas the Corporation, under the provisions of *The Power Commission Act* and amendments thereto and *The Power Commission Act of 1911*, being "An Act to Provide for the Local Distribution of Electrical Power," has, at the request of a number of ratepayers (petitioners) applied to the Commission for a supply of electrical power or energy, and has passed a By-law No. 7 to authorize the execution of an agreement therefor.

1. Now, therefore, this indenture witnesseth that, in consideration of the premises and of the agreements of the Corporation set forth, subject to the provisions of said Act and amendments and of the said contract, the Commission agrees with the Corporation:—

(a) To reserve and deliver at the earliest possible date electrical power to the Corporation as required by the Corporation.

(b) At the expiration of thirty (30) days' notice in writing, which may be given by the Corporation from time to time during the continuance of this agreement, to reserve and deliver to the Corporation additional electrical power as may be required from time to time.

(c) To use at all times first-class, modern, standard commercial apparatus and plant, and to exercise due skill and diligence so as to secure the most perfect operation of the plant and apparatus of the Corporation.

(d) Power shall be delivered to the Corporation at approximately 2,200 or 4,000 volts, or at any other primary voltage that may be available for the Corporation's use.

(e) To supply and construct all 2,200 volt, 4,000 volt or other lines at primary voltage made necessary by contracts for electric service made between the Corporation and residents or users within the Township, from the Commission's power station or transformer stations to the service transformers of the Corporation located at such points as the Commission may approve, except in that part of the Township known as Elmwood, and it is hereby understood and agreed upon by both parties hereto that all of the cost of the primary, secondary, and street lighting distribution systems located within the hamlet of Elmwood and upon the streets of same, shall be paid for direct by the Corporation, including all meters, transformers, services, street lighting brackets, poles, wires, cross arms, and any equipment necessary to serve the consumers within the said hamlet of Elmwood.

2. In consideration of the premises and of the covenants and agreements herein set forth, the Corporation agrees with the Commission:—

(a) To use all diligence by every lawful means in its power to prepare for the receipt and use of the power dealt with by this agreement, so as to be able to give notice as specified in paragraph 1 (b).

(b) Subject to the provisions of clause (g), section 2 herein, to pay the Commission monthly for all power taken, the cost of the power to be delivered by the Commission, plus the charges in connection with the delivery of power to the Municipality, as outlined in clauses 2 (c) and (d).

(c) To pay annually interest at the rate payable by the Commission upon the Corporation's proportionate part (based on the quantity of electrical energy or power taken), of all moneys expended by the Commission

on capital account for the acquiring of properties and rights, and acquiring and construction of generating plants, transformer stations, transmission lines, distributing stations and other works necessary for the delivery of said electrical energy or power to the Corporation under the terms of this contract. Also to pay an annual sinking fund instalment of such amount as to form at the end of thirty (30) years with accrued interest a sinking fund sufficient to repay the Corporation's proportionate part, based as aforesaid, of all moneys advanced by the Province of Ontario for the acquiring of properties and rights, the acquiring and construction of generating plant, transformer stations, transmission lines, distributing stations and other works necessary for delivery of said electrical energy or power delivered to the Corporation under the terms of this contract. Also to pay the Corporation's proportionate part, based as aforesaid, of the cost of lost power and of the cost of operating, maintaining, repairing, renewing and insuring said generating plants, transformer stations, transmission lines, distributing stations and other necessary works. Subject to adjustment under clause 8 of this agreement.

(d) In addition to the cost of power and cost of delivering it to the Corporation, as provided for in paragraph 2 (b) and (c), to pay to the Commission in half-yearly instalments interest and sinking fund on a thirty (30) year basis on all capital invested by the Commission in 2,200 volt, 4,000 volt or other lines of primary voltage as provided for in paragraph 1 (e), and to maintain, repair, renew and operate the said lines and set aside a depreciation fund at the rate of 5 per cent. per annum on all capital expended by the Commission on such construction.

The payments covering cost of construction of primary lines as outlined in this clause 2 (d) shall not apply to the portion of the Township known as Elmwood and the capital cost of all primary, secondary and street lighting and distribution lines in this locality, including all meters, transformers, and other necessary equipment for the distribution system, shall be borne entirely by the Corporation, but shall be constructed by the Commission and the Corporation shall make payment to the Commission within thirty (30) days after rendering of account, covering moneys spent by the Commission on construction of said primary, secondary and street lighting distribution lines, including all meters, transformers and other necessary equipment as mentioned above, comprising the said distribution system in the hamlet of Elmwood.

(e) The amounts payable in accordance with clauses 2 (b), (c) and (d) shall be paid in gold coin of the present standard of weight and fineness, at the office of the Commission at Toronto, and bills shall be rendered by the Commission on or before the 5th day, and paid by the Corporation on or before the 15th day of each month, except that payments under clause 2 (d) shall be made half-yearly. If any bill remains unpaid for fifteen days the Commission may, in addition to all other remedies, and without notice, discontinue the supply of power to the Corporation until said bill is paid. No such discontinuance shall relieve the Corporation from the performance of the covenants, provisos and conditions herein contained, and payments in arrears shall bear interest at the legal rate.

(f) To take power exclusively from the Commission during the continuance of this agreement.

(g) To pay for three-fourths of the power ordered from time to time by the Corporation and held in reserve for it as herein provided, whether it takes same or not. When the highest average amount of power taken

for any twenty (20) consecutive minutes during any month shall exceed during twenty (20) consecutive minutes three-fourths of the amount of power rendered by the Corporation and held in reserve, then the Corporation shall pay for this greater amount during the entire month. If the Corporation during any month takes more than the amount of power ordered and held in reserve for it, as determined by an integrated peak, or the highest average for a period of twenty (20) consecutive minutes, the Corporation shall pay for this greater amount of power during the entire month. The taking of such excess shall, therefore, constitute an obligation on the part of the Corporation to pay for and on the part of the Commission to hold in reserve an additional block of power in accordance with the terms and conditions of this agreement.

When the power factor at any time falls below ninety per cent. (90%), the Corporation shall pay for ninety per cent. (90%) of the kilovolt amperes, providing that said ninety per cent. (90%) of said kilovolt amperes is greater than the maximum kilowatts for any twenty (20) minute period during the month.

(h) To use at all times first-class, modern, standard, commercial apparatus and plant to be approved by the Commission and to exercise all due skill and diligence, so as to secure the most perfect operation of the plant and apparatus of the Commission and of the Corporation.

(i) To co-operate by all means in its power, at all times, with the Commission, to increase the quantity of power required from the Commission and in all other respects to carry out the objects of this agreement and of the said Act.

3. This agreement shall remain in force for thirty (30) years from the date of the first delivery of power hereunder.

4. The power shall be three-phase, alternating commercially continuous twenty-four hour power every day of the year, except as provided in paragraph 6, having a periodicity of approximately 60 cycles per second, and shall be delivered as aforesaid at a voltage suitable for distribution within the municipality.

(a) That the meters with their series and potential transformers shall be connected at the point of delivery, and shall be subject to test as to accuracy by either party hereto.

(b) The maintenance by the Commission of approximately the agreed voltage at approximately the agreed frequency at the point of delivery to the Corporation shall constitute the supply of all power involved herein and the fulfilment of all operating obligations hereunder; and when voltage and frequency are so maintained, the amount of power, its fluctuations, load factor, power factor, distribution as to phases, and all other electric characteristics and qualities are under the sole control of the Corporation, their agents, customers, apparatus, appliances and circuits.

5. The Engineers of the Commission, or one or more of them, or any other person or persons appointed for this purpose by the Commission, shall have the right from time to time during the continuance of this agreement, to inspect the apparatus, plant and property of the Corporation and take records at all reasonable hours.

6. In case the Commission should at any time or times be prevented from supplying said power, or any part thereof, or in case the Corporation shall at any time be prevented from taking said power, or any part thereof, by strike, lock-out, fire, invasion, explosion, act of God, or the King's enemies, or any other cause reasonably beyond their control, then the Commission shall not be bound to deliver such power during such times, and the Corporation shall not be bound to pay the price of said power, during such times.

7. The Commission shall at least annually adjust and apportion the amounts payable by municipal corporations for such power and such interest, sinking fund, line loss, and cost of operating, maintaining, repairing, renewing and insuring the lines and works.

8. It is hereby declared that the Commission is to be a trustee of all property held by the Commission under this agreement for the Corporation and other municipal corporations supplied by the Commission, but the Commission shall be entitled to a lien upon said property for all moneys expended by the Commission under this agreement and not repaid. At the expiration of this agreement the Commission shall determine and adjust the rights of the Corporation and other municipal corporations supplied by the Commission, having regard to the amounts paid by them, respectively, under the terms of this agreement, and such other considerations, as may appear equitable to the Commission and are approved by the Lieutenant-Governor in Council.

9. If at any time any other municipal corporation or pursuant to said Act, any railway or distributing company, or any other corporation or person, applies to the Commission for a supply of power, the Commission shall notify the applicant and the Corporation in writing, of a time and place and hear all representations that may be made as to the terms and conditions of such supply.

Without discrimination in favour of the applicants as to the price to be paid, for equal quantities of power, the Commission may supply power upon such terms and conditions as may, having regard to the risk and expense incurred, and paid, and to be paid by the Corporation, appear equitable to the Commission, and are approved by the Lieutenant-Governor in Council.

10. If differences arise between corporations to whom the Commission is supplying power, the Commission may, upon application, fix a time and place to hear all representations that may be made by the parties, and the Commission shall, in a summary manner, when possible, adjust such differences, and such adjustment shall be final.

The Commission shall have all the powers that may be conferred upon a Commissioner appointed under *The Act respecting Enquiries Concerning Public Matters*.

11. This agreement shall extend to, be binding upon and enure to the benefit of the successors and assigns of the parties hereto.

In witness whereof the Commission and the Corporation have respectively affixed their corporate seals and the hands of their proper officers.

HYDRO-ELECTRIC POWER COMMISSION OF ONTARIO,

(Sgd.) A. BECK, *Chairman*.

(Seal.)

(Sgd.) W. W. POPE, *Secretary*.

MUNICIPAL CORPORATION OF THE TOWNSHIP OF BENTINCK IN  
THE COUNTY OF GREY.

(Sgd.) GEORGE BROWN, *Reeve*.

(Seal.)

(Sgd.) JNO. HERBERT CHITTICK, *Clerk*.

The Legislature also passed the Act, set out hereafter, entitled "*An Act to amend The Water Powers Regulation Act.*"

An Act to amend The Water Powers Regulation Act.

*Assented to 12th April, 1917.*

**H**IS MAJESTY, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:—

Short title.     **1.** This Act may be cited as *The Water Powers Regulation Act, 1917.*

6 Geo. V.  
c. 21,  
amended.     **2.** *The Water Powers Regulation Act, 1916*, is amended by adding thereto the following section:—

Report of  
Inspector  
that  
owner is  
exceeding  
his rights  
as to de-  
velopment.

13.—(1) Where the inspector reports that the owner of a water power,

(a) is diverting or using more water than such owner is entitled to divert or use; or

(b) is developing or generating a greater amount of power in horse-power, than such owner is entitled to develop or generate; or

(c) has installed works and equipment capable of developing or generating a greater amount of power in horse-power than such owner is entitled to develop or generate,

Appoint-  
ment of  
Commission.  
Rev. Stat.  
c. 18.

the Lieutenant-Governor in Council may appoint three commissioners, who shall be Judges of the Supreme Court of Ontario, to hold an enquiry under *The Public Enquiries Act*, and report to the Lieutenant-Governor in Council as to,

(a) the quantity of water in cubic feet per second which such owner is entitled to divert or use;

(b) the amount of power in horse-power which such owner is entitled to develop or generate;

(c) the extent, if any, by which the capacity of the works installed or equipped by the owner, exceeds the amount of power in horse-power which the owner is entitled to develop or generate; and

(d) as to the price and terms and conditions upon which having regard to all the circumstances and to the rights of the owner as ascertained by the commissioners, the

power to the extent of such excess should be delivered to the Hydro-Electric Power Commission of Ontario as hereinafter provided; and

- (e) as to such other matters connected with or arising out of the subject matter of the references as they may deem expedient.
- (2) If the Commissioners find that the owner is diverting or using more water than he is entitled to divert or use, or is developing or generating a greater amount of power in horse-power than he is entitled to develop or generate, or that he has installed and equipped works exceeding in capacity the amount of power which he is entitled to develop or generate, the Lieutenant-Governor in Council may order the owner to deliver to the Hydro-Electric Power Commission of Ontario, upon the date named in the order, such amount of electrical power or energy as shall equal such excess as found by the report of the Commissioners, or to operate the works of the owner to their full capacity and to deliver such excess power to the Hydro-Electric Power Commission of Ontario. Where Commission finds that owner is exceeding his rights. Order requiring delivery of surplus power to H.-E. P. Commission.
- (3) If the owner refuses or neglects to deliver such power after notice in writing so to do, he shall incur a penalty of \$1,000 per diem for every day during which such neglect or default continues, to be recoverable by action in the Supreme Court at the suit of the Attorney-General of Ontario. Penalty for disobedience to order.
- (4) Nothing in this section contained shall affect or diminish any duty or obligation as to payment of any penalty or rental to which the owner might otherwise be liable for exceeding the amount of power which he is entitled to develop or generate, and all such penalties may be collected and all such rentals shall be due and payable and the like proceedings may be taken by the Crown or by any commission or other public body from which the rights or franchises of the owner are derived, as if this Act had not been passed. Other liabilities of owner not affected.

An Act was also passed authorizing the construction and operation of works for the development of electrical energy at Niagara Falls.

An Act to authorize the Construction and Operation of Works for the Development of Electrical Power and Energy in the Vicinity of Niagara Falls by the Hydro-Electric Power Commission of Ontario on behalf of Certain Municipal Corporations.

*Assented to 12th April, 1917.*

**H**IS MAJESTY, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:—

Short title.      **1.** This Act may be cited as *The Ontario Niagara Development Act, 1917*.

Interpretation.      **2.** In this Act,

“Commission.”      (a) “Commission” shall mean the Hydro-Electric Power Commission of Ontario;

“Government.”      (b) “Government” shall mean the Lieutenant-Governor in Council acting for and on behalf of the Province of Ontario.

Commission authorized to construct and operate works.      **3.** The Commission shall have and may exercise all the powers set out in section 3 of *The Ontario Niagara Development Act* for the construction and operation of the works in the said section mentioned, for the supply of electrical or pneumatic power or energy to municipal corporations which have heretofore entered or may hereafter enter into contracts with the Commission for the supply of electrical or pneumatic power or energy from the Niagara River or Welland River.

Purchase of works authorized.      **4.** For the purpose of securing a supply of electrical power or energy from the waters of the Niagara River or Welland River, the Commission with the approval of the Lieutenant-Governor in Council may exercise any of the powers set out in clauses *a* to *h* of section 8 of *The Power Commission Act*.

Cost of power at place of development.      **5.**—(1) Notwithstanding anything contained in any contract heretofore entered into between the Commission and any municipal corporation or corporations or in any general or special Act fixing the maximum price of power to municipal corporations at Niagara Falls, every municipal corporation which has heretofore entered into or which may hereafter enter into a contract for the supply of electrical or pneumatic power or energy by the Commission from the Niagara River, shall pay to the Commission a sum equal to the average cost per horse-power to the Commission of all the power supplied to the municipal corporations under contract with the Commission for the supply of power from Niagara Falls and the vicinity.

(2) In fixing the amount per horse-power so payable by a municipal corporation, the Commission shall take into account the amount payable per horse-power by the Commission to any company or individual operating works for the development of power from Niagara Falls and the vicinity, and the amount required for payment of interest on the sums expended by the Commission upon the construction and equipment of the works, and to form a sinking fund sufficient to provide for the repayment of such amounts and to provide renewals and such other charges as the Commission may deem necessary and proper.

Considerations in fixing cost to municipalities.

(3) The cost to municipal corporations of the power supplied to them by the Commission from any source at Niagara Falls, or in the vicinity of the Niagara River, shall be annually adjusted and apportioned by the Commission as provided by *The Power Commission Act*.

Annual adjustment of cost.

Rev. Stat. c. 39.

(4) The column No. 3 in Schedule "B" of the agreement dated the 4th day of May, 1908, and set out in Schedule "A" of *The Power Commission Amendment Act, 1909*, is struck out and the following substituted therefor:—

9 Edw. VII, c. 19, Schedule amended.

#### MAXIMUM PRICE OF POWER AT NIAGARA FALLS.

"The average cost per horse-power to the Commission of power developed by the Commission or procured under contract with any corporation or individual developing power at Niagara Falls, to be annually adjusted and apportioned by the Commission as set out in section 8 of *The Ontario Niagara Development Act, 1917*."

(5) Except as qualified or amended by this Act, all the terms of the said agreement of the 4th day of May, 1908, shall continue in force and apply as far as practicable in the same manner and to the same extent as if this Act had not been passed.

Agreement of 4th May, 1908, as amended, to be in force.

6.—(1) It is hereby declared that the Commission is to be a trustee of all the works constructed or acquired under the authority of this Act for the municipal corporations which have heretofore entered or may hereafter enter into contracts with the Commission for a supply of electrical power or energy from Niagara Falls or the vicinity, but the Commission shall be entitled to a lien upon the said works until all sums expended by the Commission on account of the construction and equipment of such works have been paid.

Commission to hold works as trustee for municipalities.

(2) Upon the payment of the amounts expended by the Commission upon the construction and equipment of the works, the Commission shall determine and adjust the rights of the municipal corporations, having regard to the amounts paid by them respectively, and such other considerations as may appear equitable to the Commission and are approved by the Lieutenant-Governor in Council.

Adjustment of rights of municipal corporations.

Contracts  
with com-  
panies, etc.

7.—(1) Subject to the approval of the Lieutenant-Governor in Council, the Commission may contract from time to time with any company or individual for the supply of electrical power or energy from the works constructed or acquired under the authority of this Act to such company or individual.

Application  
of profits.

(2) Any nett profit made by the Commission in supplying power under subsection 1, after making provision for the cost of acquiring, constructing and maintaining the works by means of which the power or energy is supplied, shall be applied in payment of the cost of maintaining the works constructed or acquired and operated by the Commission.

Park Com-  
missioners  
may convey  
lands to  
Commission.

8.—(1) The Commissioners for the Queen Victoria Niagara Falls Park may convey to the Commission such lands in what is commonly known as the Chain Reserve on the banks of the Niagara River, as may be required for the purposes of the works authorized in section 3 of this Act, and any portion of the fore-shore or bank of the Niagara River which lies in front of the land forming the said Chain Reservation, and the said Commissioners may enter into an agreement with the Commission to take over any lands acquired by the Commission and not actually in use for the purposes of the Commission, and to lay out, fence, improve and care for such lands as part of the Queen Victoria Niagara Falls Park, but the terms of every such conveyance and agreement shall be subject to the approval of the Lieutenant-Governor in Council.

Authority  
to execute  
necessary  
instruments.

(2) The Commissioners for the Queen Victoria Niagara Falls Park and the Commission shall have authority, subject to the approval of the Lieutenant-Governor in Council, to execute all necessary conveyances and other instruments for the purpose of carrying out any agreement entered into under subsection 1.

Issue of  
bonds by  
Commission.

9.—(1) The Commission, with the approval of the Lieutenant-Governor in Council, may issue bonds, debentures or other securities of the Commission for any of the purposes set out in sections 3 and 4 and in such form, and containing such terms, and at such rate of interest and payable in such manner and at such time or times as the Lieutenant-Governor in Council may determine.

Provincial  
guarantee  
of bonds.

(2) Section 14c of *The Power Commission Act* shall apply to the bonds, debentures and other securities which may be issued by the Commission under the authority of subsection 1.

An Act was also passed amending *The Public Utilities Act* and contains references to Hydro-Electric Power Commission matters.

An Act to amend *The Public Utilities Act*.

*Assented to 12th April, 1917.*

**H**IS MAJESTY, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:—

1. Section 32 of *The Public Utilities Act* is repealed and the following substituted therefor:— Rev. Stat.  
c. 204, s. 32,  
repealed.

32. Subject to the provisions of section 39 of *The Power Commission Act*, and notwithstanding anything in *The Municipal Act* contained, revenues arising from supplying any public utility or from the property connected with any public utility work, after providing for the expenses and maintenance of the works, shall be paid over to the treasurer of the municipality to be applied annually to the reduction or extinguishment of the rates required to be levied under any by-law for the issue of debentures of the municipality for the construction, extension or improvement of the works, and it shall not be necessary to levy any general rate to provide for sinking fund and interest or other payments on account of such debentures, except to the extent to which the revenues on hand are insufficient to meet the annual payments falling due on account of principal and interest of the debentures. Application  
of revenue—  
from public  
utility.

2. Subsection 1 of section 34 of *The Public Utilities Act* as amended by section 29 of *The Statute Law Amendment Act, 1916*, is repealed and the following substituted therefor:— Rev. Stat.  
c. 204, s.  
34, subs. 1,  
repealed.

(1) Subject to the provisions of subsections 1a to 1e, the council of a municipal corporation which owns or operates works for the production, manufacture or supply of any public utility or is about to establish such works, and the council of a township corporation which has entered into a contract with the Hydro-Electric Power Commission of Ontario for a supply of electrical power or energy in the township, may, by by-law passed with the assent of the municipal electors, provide for entrusting the construction of the works and the control and management of the same to a commission to be called "The Public Utilities Commission of the (*naming the municipality*)," or in the case of such township, "The Hydro-Electric Commission of the Township of (*naming the township*)," or to a commission established under this Part. Establish-  
ment of  
municipal  
commission.

Appoint-  
ment of  
commission  
for village.

Rev. Stat.  
c. 39.

- (1a) Where the corporation of a village has entered into a contract with the Hydro-Electric Power Commission of Ontario, under *The Power Commission Act*, for a supply of electrical power or energy a commission may be established by by-law of the council under the provisions of this Part for the control and management of the construction, operation and maintenance of all works undertaken by the corporation for the distribution and supply of such electrical power or energy, and it shall not be necessary that such by-law receive the assent of the electors.

Village  
commis-  
sions  
heretofore  
established.

- (1b) Every such commission heretofore established by the council of a village shall be deemed to have been lawfully established, and the by-law establishing such commission shall be deemed to be and to have been legal, valid and binding from the time of the passing thereof, notwithstanding that such by-law was passed and such commission was established without the assent of the electors first having been obtained.

Repeal of  
village  
by-law  
establishing  
commission.

- (1c) A by-law passed by the council of a village for the establishment of a commission without the assent of the electors may be repealed by the council at any time and it shall not be necessary to obtain the assent of the electors to such repeal.

Assent of  
electors.

- (1d) Where a by-law establishing a commission in a village has been passed with the assent of the electors the by-law may be repealed with the like assent.

Effect of  
repeal.

- (1e) Upon the repeal of a by-law establishing a commission under this section, the control and management of the works shall be vested in the council and the commission shall cease to exist.

Rev. Stat.  
c. 204, s. 38,  
amended.

3. Section 38 of *The Public Utilities Act* is amended by adding thereto the following subsection:—

Salaries of  
municipal  
commission-  
ers to be  
approved by  
Commission.

- (2) Where a commission is established which has the control and management of works constructed for the distribution of electrical power or energy supplied by the Hydro-Electric Power Commission of Ontario, the salary or other remuneration of the commissioners, so far as the same is chargeable to such works, shall be subject to the approval of the Hydro-Electric Power Commission of Ontario.

Rev. Stat.  
c. 204, s. 45,  
subs. 3,  
amended.

4. Subsection 3 of section 45 of *The Public Utilities Act* is amended by inserting after the word "utility" in the sixth line thereof the words, "for the purpose of cutting off the supply of such utility or of making an inspection from time to time to determine whether such utility has been or is being unlawfully used or."

The following agreement for the Purchase of Stock in Company by the Hydro-Electric Power Commission was entered into:—

AGREEMENT made this twelfth day of April, A.D. 1917;

BETWEEN:

JOHN JOSEPH ALBRIGHT, of Buffalo, in the State of New York, on behalf of himself and other Stockholders of The Ontario Power Company of Niagara Falls (hereinafter called the Vendor),

of the First Part;

—and—

THE HYDRO-ELECTRIC POWER COMMISSION OF ONTARIO (hereinafter called the Purchaser),

of the Second Part;

—and—

HIS MAJESTY THE KING, herein represented by the Lieutenant-Governor in Council of the Province of Ontario, acting by Sir William Hearst, Prime Minister of the said Province, (hereinafter called the Guarantor),

of the Third Part;

—and—

THE ONTARIO POWER COMPANY OF NIAGARA FALLS (hereinafter called the Power Company),

of the Fourth Part;

—and—

THE ONTARIO TRANSMISSION COMPANY, LIMITED (hereinafter called the Transmission Company),

of the Fifth Part;

—and—

NIAGARA, LOCKPORT AND ONTARIO POWER COMPANY (hereinafter called the Lockport Company),

of the Sixth Part;

WHEREAS, the Power Company has an issued and outstanding capital stock of Ten Million Dollars (\$10,000,000) par, amount represented by One Hundred Thousand shares of the par value of One Hundred Dollars (\$100.00) each—

NOW THIS AGREEMENT WITNESSETH that, in consideration of the covenants, agreements and considerations herein contained, the parties respectively covenant and agree the one with the other as follows:—

#### APPENDIX "C."

FIRST: The Vendor agrees to sell to the Purchaser and the Purchaser agrees to purchase from the Vendor, ninety thousand (90,000) shares of the par value of one hundred dollars (\$100.00) each, of the capital stock of the Power Company and the remaining ten thousand (10,000) shares of said stock of the par value of one million dollars (\$1,000,000) to the extent that the holders thereof put the Vendor in a position to make delivery of such shares to the Purchaser prior to the time for completion as hereinafter defined.

SECOND: The consideration for the said sale shall be:

(a) The sum of eight million dollars (\$8,000,000), or such portion of said sum as shall equal eighty per cent. (80%) of the par amount of the shares of said stock of the Power Company transferred and delivered to the Purchaser at the time for completion as hereinafter defined, which sum the Purchaser hereby agrees to pay and satisfy by the issue and delivery to the Vendor of the debentures of the Purchaser guaranteed as hereinafter provided for, bearing date on the date of the said time for completion in such denominations being multiples of one hundred dollars (\$100.00) as the Vendor shall require, payable forty years from the said date and bearing interest at the rate of four per cent. (4%) per annum, payable half-yearly, said debentures being payable as to principal and interest in Toronto, Canada; New York, United States of America, and/or London, England, at the option of the holders; the said debentures as to both principal and interest to be payable in gold coin of the present standard of weight and fineness of the country where same shall be paid; and, unless otherwise agreed between the Vendor and the Purchaser, interest coupons to be attached to said debentures and the said debentures and the coupons attached thereto to be in the forms set out in Schedule "A" to this agreement, or to the like effect with any variations or additions which the Vendor may before the time for completion required to secure listing and quotation of same on any exchange or exchanges; said debentures and coupons to be engraved or lithographed, the debentures to be sealed with the seal of the Purchaser and signed by the Chairman and Secretary, and the coupons to be signed by the Secretary; the signature of the coupons to be either written or lithographed or engraved as the Purchaser may determine. Provided that in lieu of delivering at the time for completion said lithographed or engraved debentures the Purchaser may issue and deliver interim debentures with or without coupons, such interim debentures and coupons, if any, to be in such form and in such denominations as the Vendor may be willing to accept and to be guaranteed as to principal and interest in the same manner as is provided for in respect of said lithographed or engraved debentures, and to entitle the holder or holders thereof to said lithographed or engraved debentures as soon as the same are prepared in exchange for an equal amount of said interim debentures, and to give to the holder or holders thereof, or of any coupons attached thereto, pending such exchange, every right which the holder or holders of said lithographed or engraved debentures would have; and if interim debentures are delivered, the said lithographed or engraved debentures shall be prepared and made ready to be exchanged therefor within two months from the time for completion as hereinafter defined, and shall be exchanged for said interim debentures as and when said interim debentures are delivered to the Purchaser after said lithographed or engraved debentures are so prepared and made ready; and

(b) The execution and delivery by the Purchaser of an agreement with the Vendor and the Toronto General Trusts Corporation, which, unless otherwise agreed between the Vendor and the Purchaser, shall be in the form set out in Schedule "B" of this agreement, and which the Purchaser agrees with the Vendor to execute and deliver at the time for completion as hereinafter defined.

THIRD: It is understood between the Vendor and the Purchaser, and the Purchaser agrees with the Vendor, that before the time for completion as hereinafter defined, the Vendor may cause or procure the Power Company to do and the Power Company may do all such things as may be requisite or proper to be done so that at the time for completion as hereinafter defined the respective assets of the Power Company and the Transmission Company will consist only of those described in Schedule "C" to this agreement. And it is further understood between the Vendor and the Purchaser, and the Vendor agrees with the Purchaser that the Vendor will cause or procure the Power Company and the Transmission Company to do all such things as may be required or

proper to be done so that the respective liabilities (whether direct, indirect, contingent, accruing or accrued) of the said companies at the time for completion as hereinafter defined, shall be only those described in Schedule "D" to this agreement, and in default of so doing or in so far as he shall not so do the Vendor will pay or settle all such liabilities.

The Power Company and the Purchaser severally agree with the Vendor that should the Power Company and/or the Transmission Company before the time for completion have sold or assigned any assets of either Company, such as accounts receivable or other choses in action, and should such assets not have been collected or reduced to possession by the owner or owners thereof, the Power Company and/or the Transmission Company will, from time to time, at the request and expense of the Vendor, use all reasonable means to collect and get in such of said assets or the proceeds thereof as the Vendor may specify, and will account for and pay and deliver over such assets or proceeds, as the case may be, from time to time received by the Power Company and/or the Transmission Company to the Vendor or the person or persons respectively entitled thereto.

The Vendor agrees with the Power Company and the Purchaser that in addition to the assets set out in said Schedule "C" hereto, there shall be left in the hands of the Power Company at the time for completion a sum estimated by the Vendor to be equal to—

(a) Interest and Sinking Fund payments on the bonds and debentures of the Power Company and the Transmission Company mentioned in the said Schedule "D" which shall have accrued but shall not be due at the time for completion, and

(b) The proper proportion of all rentals and payments to the Commissioners of the Queen Victoria Niagara Falls Park, and of all unpaid rates, taxes and assessments for the year 1917, adjusted to the time for completion, and if such estimate shall, after completion, prove inaccurate, the excess or deficiency when determined shall be paid by the Vendor to the Power Company, or by the Power Company or the Purchaser to the Vendor as the case may require.

The assets of the Power Company at the time for completion are not intended to include any rentals, sums or moneys payable or to become payable for power supplied or otherwise, under any lease or contract which shall have accrued or shall have been earned, but shall not be due or payable at the time for completion, and if they do include any such items the Purchaser shall use every reasonable effort to collect such items, and if and when collected shall pay, or procure to be paid, to the Vendor, the amount thereof adjusted to the time for completion, and the Purchaser shall also at the time for completion pay or procure to be paid to the Vendor the value of all prepaid insurance, rentals, taxes, rates (including local improvement rates), assessments and payments for telephone services adjusted to the time for completion.

FOURTH: The Purchaser shall have thirty days from the date hereof within which to examine the real property titles of the Power Company and of the Transmission Company. The Vendor shall not be obliged to deliver any abstract of title or to incur any expense in connection with the investigation of said titles, but the Purchaser shall search the said titles entirely at its own expense. The Vendor will permit the Purchaser or procure the Purchaser to be permitted to inspect all documents relating to the titles which may be in the possession or power of the Power Company or the Transmission Company. If any objection or requisition in respect of said titles shall be made by the Purchaser which the Vendor may for any reason whatsoever be unwilling to comply with or to remove whether able to do so or not, the Vendor shall

have the right to rescind this agreement by written notice to the Purchaser, of his election to do so, and such right may be exercised notwithstanding any attempt to remove or to comply with or any partial removal or compliance with any such objection or requisition, and notwithstanding any negotiations which may have been had between the parties with reference thereto. If the Purchaser shall not have made any specific requisition or objection to the said titles within the said period of thirty days, or if all specific requisitions or objections made within the said period of thirty days shall have been removed or complied with or waived, the Purchaser shall be deemed to have accepted the titles of the Power Company and of the Transmission Company; provided always that the Purchaser may waive all such objections or requisitions by giving notice in writing to that effect to the Vendor at any time within fifteen days from the receipt of such notice of rescission, and upon such notice of waiver being given this agreement shall remain in full force and effect as though such objections or requisitions had never been made.

FIFTH: Upon the completion of the sale under this agreement, the Vendor agrees that he will tender or cause to be tendered the resignation of all members of the Boards of Directors of the Power Company and of the Transmission Company, and also that he will tender or cause to be tendered the resignation of all officers of said companies respectively, or will terminate, or cause to be terminated, their employment, and that the Boards of Directors of the Power Company and the Transmission Company will at that time respectively assist the Purchaser in acceptance of such resignations and in the election of new directors nominated by the Purchaser.

SIXTH: The Vendor agrees that the Power Company and the Transmission Company will, until the time for completion as hereinafter defined, repair and keep in repair and in good working order and condition, reasonable wear and tear only excepted, all the present buildings, erections, plant, machinery and fixtures of said companies and all additions thereto, and will, pending said time for completion and, except as otherwise expressly provided for herein, carry on the respective businesses of said companies in the usual and ordinary manner, but in case any loss or damage which would involve an expenditure of more than two hundred and fifty thousand dollars (\$250,000) shall occur, the Vendor may, by notice in writing addressed to the Purchaser, rescind this agreement, unless the Purchaser shall, by notice in writing, waive the above covenants to repair, rebuild or make good, and agree to accept, in lieu thereof, an assignment of the rights of the Vendor, the Power Company and the Transmission Company, or of any one or more of them (if any), to such insurance moneys as may be payable in respect thereof; provided that the Vendor shall not, nor shall the Power Company or the Transmission Company proceed with any such repairs, rebuilding or making good until one week after it shall have submitted the plans thereof to the Purchaser and shall have considered any representations or suggestions which the Purchaser may make in respect thereof. In case there shall be an obligation to repair, rebuild and make good under the foregoing provisions, and the Vendor shall not have rescinded this agreement under the provisions of this clause, the completion of this agreement shall not be thereby delayed, but the assets of the Power Company will be restored by the inclusion therein of a sum estimated in good faith by the Vendor to be equal to the reasonable cost of such repair, rebuilding, or making good, or so much thereof as shall not have been finished or paid for at the time for completion, and should said sum prove to be less than such reasonable cost the difference when determined shall be paid by the Vendor to the Power Company. Neither the Vendor, the Power Company nor the Transmission Company shall be obliged to make any betterments or improvements to the property of either company, but if any such improvements shall be deemed expedient by either company, the Vendor shall cause the Purchaser to be notified in case the expenditure in respect of any one item shall exceed five hundred dollars (\$500.00) and the Purchaser shall pay the Vendor in cash at the

time for completion as hereinafter defined, a portion of all expenditures made by either company for the betterment or improvement of the property of either company from the date hereof up to said time for completion in respect of—

(a) Items not exceeding five hundred dollars (\$500.00) and

(b) All items exceeding five hundred dollars (\$500.00) in respect of which the Purchaser shall have consented to the expenditure in writing, which portion shall bear the same proportion to the total amount of such expenditure as the amount of stock of the Power Company delivered to the Purchaser in completing this agreement bears to the total issued capital stock of the Power Company.

The Vendor agrees with the Purchaser that until the time for completion, as herein-after defined, neither the Power Company nor the Transmission Company will surrender any of the franchise rights or privileges granted to them, or either of them, or do, omit or permit to be done or omitted, any act or thing whereby any such particular rights or privileges may become forfeited or terminated, or liable to forfeiture or termination.

SEVENTH: The Guarantor agrees with the Vendor and the Purchaser and each of them to guarantee and hereby guarantees to the respective holders thereof for the time being the due payment by the Purchaser of the interest and principal of all debentures of the Purchaser to be delivered under the terms of this agreement, and the Guarantor further agrees that a guarantee duly executed by the Guarantor and guaranteeing to the Holder thereof for the time being payment of the interest and principal thereof by the Purchaser, shall be endorsed upon each of said debentures of the Purchaser so to be delivered prior to the delivery thereof hereunder, such guarantee, unless altered by consent, to be in the form set out in Schedule "A" to this agreement or to the like effect; and the Guarantor further agrees with the Vendor and the Purchaser, and each of them, to guarantee and hereby guarantees to the Vendor and to the Toronto General Trusts Corporation and its successors and assigns the due performance and observance by the Purchaser of the agreement between the Purchaser and the Vendor and the Toronto General Trusts Corporation to be executed by the Purchaser under the provisions of clause (b) of the second section of this agreement.

EIGHTH: The Lockport Company, the Power Company and the Purchaser mutually agree:—

(a) That on the first day of April, 1950, if all the now outstanding bonds of the Lockport Company shall have been paid and retired on or before that date, and otherwise as soon after the first day of April, 1950, as all of the said bonds of the Lockport Company shall have been paid and retired, and in any event not later than the first day of November, 1954, the existing contract between the Power Company and the Lockport Company, evidenced by four agreements made between the Lockport Company and the Power Company, and dated, respectively, the 16th day of July, 1904; the 30th day of December, 1904; the 31st day of October, 1905, and the 30th day of December, 1913, (hereinafter called the existing power supply contract) and any extension or renewal of or right of either party thereto to extend or renew the same shall cease and determine; and

(b) That in case the Power Company shall at any time or times be prevented by any competent authority other than the Legislature or Government of the Province of Ontario, or by strike, lock-out, riot, fire, invasion, explosion, act of God or the King's enemies, or any other cause, reasonably beyond its control, from delivering to the Lockport Company the power deliverable under the existing power supply contract, or any extension or renewal thereof, or any part of such power, or in case the Lockport Company shall at any time be so prevented from taking such power or any part thereof,

then the Power Company shall not be bound to deliver such power during such time or times or be liable for any penalties or damages or deductions for non-delivery during such time or times, and the Lockport Company shall not be bound to pay for such power during such time or times, but as soon as the cause of such interruption is removed, the Power Company shall, without any delay, deliver the said power as aforesaid, and the Lockport Company shall take the same, and each of the said parties (the Power Company and the Lockport Company) shall, so far as such party can do so, and as early as possible, remove and overcome such cause or causes of interruption.

The Lockport Company covenants with the Power Company and the Purchaser, and each of them, that all the said bonds of the Lockport Company will be paid and retired before or on the first day of November, 1954.

The Power Company agrees with the Lockport Company and the Purchaser agrees with and guarantees to the Lockport Company, and agrees with and guarantees to the Vendor that the Power Company will duly abide by, observe and perform the existing power supply contract between the Power Company and the Lockport Company (as varied by this agreement) and all extensions or renewals thereof; and the Purchaser and the Guarantor undertake and agree with the Power Company, the Lockport Company, the Transmission Company and the Vendor, to use their best endeavours from time to time with the Government and Parliament of Canada and with the Legislature of Ontario to place and keep the Power Company and the Transmission Company at all times in such a position that they and each of them may lawfully carry out the terms of the existing power supply contract between the Power Company and the Lockport Company (as varied by this agreement) and any extensions or renewals thereof so far as relates to the export of the power required for the purpose of such contract, as so varied, and any extensions or renewals thereof.

The Purchaser, the Power Company and the Lockport Company mutually agree that except as by this paragraph (eighth) varied, the existing power supply contract shall continue and remain in full force and effect.

NINTH: This agreement shall not take effect or be binding upon the parties hereto unless and until it shall have been executed and delivered by all the said parties.

TENTH: The Vendor agrees with the Purchaser that neither the Power Company nor the Transmission Company will, before the time for completion as hereinafter defined, create or issue any further shares or their capital stocks, respectively, or any bonds, debentures or like securities.

ELEVENTH: The Vendor agrees with the Purchaser that the Vendor will, from time to time, after the completion of this Agreement, upon the request and at the expense of the Purchaser, furnish to the Purchaser any and all information in connection with any and all of the affairs of the Power Company and the Transmission Company which the vendor may have in his possession or under his control.

TWELFTH: The time for completion of this agreement shall be the first day of the calendar month which shall fall next after sixty (60) days from the execution and delivery of this agreement by all the parties thereto, and if such execution and delivery shall not have taken place by the first day of June, 1917, this agreement shall be void; provided that the Vendor and Purchaser may agree in writing to an extension or extensions of the said date, and of the said time for completion, or either of them, and every such agreement shall be binding on all parties hereto, and if and as often as the time for completion shall be extended the time to which it is extended shall thereafter be taken to be the time for completion for the purposes of this agreement.

THIRTEENTH: The completion of this agreement shall take place at the office of the Purchaser at Toronto, Ontario.

FOURTEENTH: The Power Company and the Transmission Company assent, and each of them assents, to this agreement, and the Power Company and the Transmission Company agree, and each of them agrees, with the Vendor that they and each of them will, at the expense of the Vendor, facilitate in all reasonable ways the due carrying out of all the terms of this agreement to be carried out by the Vendor, and that they and each of them on its part will do and cause to be done all such acts and things as the Vendor hereby agrees to cause or procure to be done by the Power Company and the Transmission Company or either of them.

FIFTEENTH: Time shall be of the essence of this agreement.

SIXTEENTH: The obligations of the Guarantor hereunder shall extend to his successors; and the obligations of every other party hereunder shall bind the successors and assigns of such party if a corporation and the executors, administrators and assigns of such party if a person; and all rights of and benefits to any party hereunder shall extend and enure to the successors and assigns of such party if a corporation, and to the executors, administrators and assigns of such party if a person.

In witness whereof these presents have been duly executed by the parties hereto the day and year first above written.

SCHEDULE "A" REFERRED TO IN THE ANNEXED AGREEMENT.

FORM OF DEBENTURE.

\$.....

No.....

£.....

The Hydro-Electric Power Commission of Ontario (hereinafter called "the Commission") for value received, hereby promises to pay to the bearer, or, if registered, to the registered holder hereof, on the ..... day of ..... 19 , on presentation and surrender of this debenture, the sum of ..... dollars, at ..... in Toronto, Canada, or at ..... in New York, United States of America, or the sum of ..... pounds sterling, at ..... in London, England, at the holder's option, with interest thereon, until paid, at the rate of four per centum per annum, payable half-yearly, at any of said places, at the holder's option, on the first day of ..... and the first day of ..... in each year, on presentation and surrender of the interest coupons hereto annexed as they severally become due; each payment of principal and interest to be made in gold coin of the present standard of weight and fineness of the country where same shall be made.

This debenture shall pass by delivery, but may be registered as to principal in the name of the holder in a register which shall be kept by the Commission at its office in Toronto, Canada, in which case it can only be transferred by an instrument in writing, signed by the registered holder or his lawful attorney, and registered in the said register. A transfer to bearer may subsequently be registered, after which this debenture shall be transferable by delivery alone until again registered in the name of the holder. Notwithstanding registration, the interest coupons shall continue payable to bearer.

This debenture is issued under the authority of an Act of the Legislative Assembly of the Province of Ontario, entitled ..... and being Chapter ..... of the Statutes of Ontario (1917) passed in the seventh year of the reign of His Majesty King George V.

In witness whereof the Commission has caused its corporate seal to be hereunder affixed and this debenture to be signed by ..... and ..... this ..... day of ....., 19 .

(Seal)

FORM OF INTEREST COUPON.

Debenture No. ....

Interest Coupon No. ....

The Hydro-Electric Power Commission of Ontario will pay to the bearer on the ..... day of ..... dollars at ..... in Toronto, Canada, or at ..... in New York, United States of America, or ..... pounds sterling, at ..... in London, England, at the bearer's option; such payment to be made in gold coin of the present standard of weight and fineness of the country where same shall be made, and being the half-year's interest on debentures No. .... payable on the ..... day of ..... 19 .

Dated the ..... day of ..... 19 .

## FORM OF GUARANTEE FOR ENDORSEMENT ON DEBENTURES.

By virtue of powers conferred by the Legislature of the Province of Ontario, Canada, the Province of Ontario hereby guarantees to the holder of the within bond for the time being and to the holder for the time being of any of the coupons attached thereto, due payment of the principal of the within debenture and of the interest thereon, according to the tenor of the said debenture and of the coupons attached thereto.

## SCHEDULE "B" REFERRED TO IN THE ANNEXED AGREEMENT.

This Agreement made this ..... day of ..... A.D. 1917:

BETWEEN:

THE HYDRO-ELECTRIC POWER COMMISSION OF ONTARIO, (hereinafter called "the Commission"),

of the First Part;

—and—

JOHN JOSEPH ALBRIGHT, of Buffalo, in the United States of America, herein-after called "the Vendor"),

of the Second Part;

—and—

THE TORONTO GENERAL TRUSTS CORPORATION, representing and acting herein for the benefit of the various holders for the time being of the various bonds and debentures hereinafter mentioned, (hereinafter called "the Trustees"),

of the Third Part;

WITNESSETH THAT—

FIRST: For divers valuable considerations and in consideration of one dollar (\$1.00) of lawful money of Canada, paid by the Vendor and the Trustees to the Commission, receipt of all which considerations the Commission hereby acknowledge, the Commission hereby covenants with the Vendor and the Trustees and each of them—

(1) That the Ontario Power Company of Niagara Falls (hereinafter called the Power Company) will duly pay, as the same become due, the outstanding first mortgage five per cent., forty-year sinking fund gold bonds of the Power Company, amounting on the 31st December, 1916, to the sum of nine million nine hundred and eighty-four thousand dollars (\$9,984,000) and all interest thereon and sinking fund payments connected therewith secured by mortgage dated the 2nd of February, 1903, between the Power Company and the Trustees, and Supplementary Agreement dated the 1st October, 1908, between the Power Company and Francis Ralston Welsh, and others, and will perform, abide by and observe all the covenants, agreements, provisoes and obligations on the part of the Power Company in the said bonds, and/or in the said mortgage and supplementary agreement contained; and

(2) That the Power Company will duly pay as the same become due the outstanding 6 per cent. gold coupon debentures of the Power Company, payable as to principal on the 1st day of July, 1921, amounting on the 31st December, 1916, to two million eight hundred and eighty thousand dollars (\$2,880,000) and all interest thereon

and sinking fund payments connected therewith, secured by indenture dated 30th June, 1906, made between the Power Company and the Trustees, and by a second mortgage, dated 2nd November, 1914, between the Power Company and National Trust Company, Limited, and will perform, abide by and observe all the covenants, agreements, provisos and obligations on the part of the Power Company in the said debentures, and/or in the said indenture and/or mortgage contained; and

(3) That the Power Company and/or the Ontario Transmission Company, Limited (hereinafter called the Transmission Company), will duly pay as the same become due the outstanding 5 per cent. first mortgage gold bonds of the Transmission Company, payable as to principal on the first day of May, 1945, amounting on the said 31st December, 1916, to one million eight hundred and five thousand dollars (\$1,805,000) and all interest thereon and sinking fund payments connected therewith secured by a first mortgage, dated 16th August, 1905, between the Transmission Company and the Trustees, and two certain agreements, the one dated 20th April, 1910, between the Power Company, the Transmission Company, the Trustees and the Holders from time to time of the 5 per cent. first mortgage gold bonds of the Transmission Company, and the other dated 11th June, 1910, between the Transmission Company, the Standard Trust Company of New York, the Power Company and the Holders from time to time of the said 5 per cent. first mortgage gold bonds of the Transmission Company, and will perform, abide by and observe all the covenants, agreements, provisos and obligations on the part of the Transmission Company, and/or the Power Company in the said bonds of the Transmission Company and/or in the said mortgage, and/or in the said agreements dated respectively 20th April, 1910, and 11th June, 1910, contained.

SECOND: This agreement shall bind the Commission, its successors and assigns and enure to the benefit of the executors, administrators and assigns of the Vendor and the successors and assigns of the Trustees.

In witness whereof, these presents have been duly executed by the parties hereto the day and year first above written.

## SCHEDULE "C" REFERRED TO IN THE ANNEXED AGREEMENT.

## ASSETS OF THE POWER COMPANY AND/OR THE TRANSMISSION COMPANY.

(a) All freehold and leasehold lands, tenements and hereditaments of the Power Company and/or the Transmission Company, including the house in the City of Niagara Falls, Ontario, standing in the name of R. C. Board.

(b) All contracts between the Power Company and/or the Transmission Company and the Commissioners of the Queen Victoria Niagara Falls Park, and all rights and privileges thereunder.

(c) All franchises, easements, water powers, water privileges and water rights of the Power Company and/or the Transmission Company.

(d) All works, buildings, fixtures, plant, machinery, equipment and apparatus of every kind of the Power Company and/or the Transmission Company.

(e) All documents, including plans, records, contracts, and specifications of the Power Company and/or the Transmission Company.

(f) All furniture, chattels, stock-in-trade, stores, licenses, patent rights, prepaid insurance and books of account and other books of the Power Company and/or the Transmission Company, including items described as "work orders" and "working assets."

(g) All interest of the Power Company and/or the Transmission Company in all contracts and engagements mentioned or described under letters (e), (f), (g), (h) and (i) in schedule "D" to the annexed agreement.

(h) All the shares in the capital stock of the Transmission Company, said shares being owned by the Power Company.

## SCHEDULE "D" REFERRED TO IN THE ANNEXED AGREEMENT.

## LIABILITIES OF THE POWER COMPANY AND/OR THE TRANSMISSION COMPANY.

(a) First mortgage five per cent. bonds of the Power Company, and interest thereon, and sinking fund payments connected therewith; said bonds amounting on the 31st December, 1916, to the sum of nine million nine hundred and eighty-four thousand dollars (\$9,984,000), and all covenants, agreements, obligations and liabilities of the Power Company, in or under the mortgage dated 2nd February, 1903, between the Power Company and the Toronto General Trusts Corporation and/or the supplemental agreements dated 1st October, 1908, between the Power Company and Francis Ralston Welsh and others, securing said bonds.

(b) Six per cent. (6%) gold coupon debentures of the Power Company and interest thereon and sinking fund payments connected therewith, said debentures amounting on the 31st December, 1916, to the sum of two million eight hundred and eighty thousand dollars (\$2,880,000), and all covenants, agreements, obligations and liabilities of the Power Company, in or under the indenture dated 30th June, 1906, made between the Power Company and the Toronto General Trusts Corporation and/or the second mortgage, dated 2nd November, 1914, made between the Power Company and National Trust Company, Limited, securing said debentures.

(c) All obligations and liabilities of the Power Company as guarantors or otherwise in respect of the first mortgage gold bonds of the Transmission Company, including

all such obligations and liabilities under any covenant, agreement or guarantee relating to said bonds.

(d) First mortgage five per cent. gold bonds of the Transmission Company, and interest thereon, and sinking fund payments connected therewith, said bonds amounting on the 31st December, 1916, to one million eight hundred and five thousand dollars (\$1,805,000), and all covenants, agreements, obligations and liabilities of the Transmission Company, in or under the mortgage dated August 16th, 1905, made between the Transmission Company and the Toronto General Trusts Corporation, and/or two certain agreements, the one dated 20th April, 1910, made between the Power Company, the Transmission Company, the Toronto General Trusts Corporation, and the Holders from time to time of the five per cent. first mortgage gold bonds of the Transmission Company, and the other dated 11th June, 1910, made between the Transmission Company, the Standard Trust Company of New York, the Power Company and the Holders from time to time of the said first mortgage gold bonds of the Transmission Company.

(e) All obligations and liabilities of the Power Company and/or the Transmission Company under any and all contracts or agreements between the Power Company and/or the Transmission Company and the Commissioners of the Queen Victoria Niagara Falls Park.

(f) All obligations and liabilities of the Power Company and/or the Transmission Company under all power supply contracts (whether made originally by the Power Company and/or the Transmission Company or otherwise), with the following parties:—

Niagara, Lockport and Ontario Power Company,  
Canadian Steel Foundries, Limited,  
Canada Cement Company, Limited,  
Canadian Ramapo Iron Works,  
Electro-Metals, Limited,  
Department of Railways and Canals,  
Coniagas Reduction Company,  
American Cyanamid Company,  
Town of Merritton,  
Hydro-Electric Power Commission,  
The Norton Company,  
Dain Manufacturing Company, Limited,  
Cronmiller & White Brewing Company,  
C. Reichman & Son,  
James Battle,  
Page, Hersey Iron Tube and Lead Company, Limited,  
The Robinson Bros. Cork Co., Limited,  
Ontario Paper Company, Limited,  
Charles T. Grantham (Empire Cotton Mills),  
Metals-Chemical, Limited,  
A. E. Augustine,  
Beaver Wood Fibre Company, Limited,  
Corporation of Port Colborne,  
Humberstone Village,  
Humberstone Summer Resort,  
H. J. Shore,  
Ideal Baking Company,  
Humberstone Shoe Company,  
P. Noxel,  
Woods & Son,  
R. A. Wilson,  
E. Reeb.

(g) All obligations and liabilities of the Power Company and/or the Transmission Company, under three contracts for the purchase of power from the Toronto Power Company of Ontario, Limited, dated respectively, September 5th, 1914; October 13th, 1915, and March 17th, 1916.

(h) All written contracts and engagements which the Power Company and/or the Transmission Company may make or enter into in the ordinary course of business prior to the time for completion.

(i) All leases and contracts for crossings, rights of way and pole, wire, cable and transmission rights and privileges which the Power Company and/or the Transmission Company shall hold, possess or be liable for at the time for completion, and all liabilities and obligations in respect of rentals or otherwise thereunder.

(j) All assessments, rates and taxes, including local improvement rates.

(k) Obligation of Power Company for commissions on all power sold to Ontario Paper Company, Limited, and Beaver Wood Fibre Company, Limited.

(l) All obligations and liabilities of the Power Company and/or the Transmission Company on contracts for telephone service.

(m) Any obligation or liability of the Power Company or of R. C. Board in connection with the mortgage on the house mentioned under letter (a) in Schedule "C" to the annexed agreement.

---

## REAL ESTATE

The construction of Chippawa Power Development and other undertakings has rendered it necessary to purchase real estate where affected by the right-of-way. Reports have been prepared on the ownership of real estate and riparian rights at Ranney's Falls and other points. Applications for crown grants and leases have been applied for, covering land at Round Lake and South River.

Real estate affected by right-of-way has been purchased in the following cases:

### Purchases

The real estate purchases consist of:—

1. Lands required for the Chippawa to Queenston Power Canal and the construction railway which parallels it and which will, after its construction, be used as an industrial spur.
2. Right-of-way for the duplication of the high tension transmission line from Dundas to Toronto.
3. The Central Ontario system which was purchased from the Electric Power Company and transferred to the Ontario Government by act of parliament.
4. The property of the Ontario Power Company which is located principally in the City of Niagara Falls and the Township of Stamford.
5. Conduit for new power cable at Falls View.
6. University street office site extension.
7. York sub-station site.
8. Extension of Niagara Falls distributing station site.
9. Erindale Power Company at Erindale.

The above-mentioned purchases necessitated the following work:—

- (a) The filing of deeds and other title papers.
- (b) Checking descriptions and plans for deeds.
- (c) Reports on ownership of land at Dams 2 and 5, Trent River, north of the Town of Trenton.
- (d) Report on ownership of the Waterworks land, Trenton.
- (e) Report on the Cartwright property, Napanee.
- (f) Report on ownership, South River Development.
- (g) Inspection of the Commission's property and boundaries of same.
- (h) Inspection of new land surveys.
- (i) Surveys of land, preparation of descriptions and plans in certain cases.
- (j) Preparation of report for the Tax Commissioner on the Commission's properties.

Plans showing the real estate owned by the Commission in Stamford Township and Niagara Falls are being prepared, and a survey made of conditions governing this land as defined by the title papers.

Exciter Bay, Ontario Power Company

### Crossing Designs

During the year several important railway structures were designed for the Niagara Development works, where seven distinct crossings of different railway lines are made by canal and construction railway. Among these were the Niagara, St. Catharines and Toronto Railway arch with span of 86 feet, designed to carry Cooper's E-60 loading, and the G.T.R. (Wabash) arch, with a span of 100 feet, designed for similar loading. Both of these structures are of reinforced concrete and are unique in being the largest of their kind in Canada. A great many negotiations were necessary with the various railways interested, in order to effect temporary diversions of their tracks while permanent structures were being built, and to maintain the uninterrupted operation of their lines.

The permanent structure under the Niagara, St. Catharines and Toronto Railway is now well under construction. Negotiations have also been carried on with the Dominion Department of Public Works, Department of Railways and Canals, and the Queen Victoria Niagara Falls Park Commission, with a view of meeting their requirements in connection with changes to mouth and channel of Chippawa Creek.

Studies have also been made in connection with the replacement of Chippawa Highway swing bridge, and a number of other highway structures, that will be necessary to provide for crossings of the Development Canal.

A number of railway standards in design were prepared and utilized on the construction railway of the Niagara Development work.

---

## SECTION II

### TRANSMISSION SYSTEMS

#### STEEL TOWER TRANSMISSION LINES

##### DUNDAS—TORONTO

##### Surveys

During the earlier part of the year a survey party was engaged in taking levels for a profile of the line. This work was completed in December, 1916, and after the profile plans had been finished, the same party commenced staking out towers in the field.

##### Contracts for Material

Contracts for material were let to the following companies:

To the Canadian Bridge Company of Walkerville, the supply of galvanized steel towers and footings.

To the Canadian Porcelain Company of Hamilton, and the Ohio Brass Company of Akron, Ohio, the supply of insulators.

To the Hadley Company of Chatham, the supply of fence posts and lumber for bridges and culverts.

To the Frost Wire Fence Company of Hamilton, the supply of fence wire and gates.

The remainder of the material, with the exception of copper cable, was supplied from the Commission's stores.

On account of market conditions, it was decided to delay the purchase of power cable until conditions became more favourable.

##### Organization

The field organization for the year 1917 was similar to that used in 1915 on the Niagara-Dundas line and consisted of tower footing, tower assembly and erection, right-of-way clearing, fence, bridge and insulator erection gangs.

##### Progress of Construction

The total length of this line is about 35 miles.

Work was commenced on January 5, 1917, and completed on October 29th with the exception of the stringing of power cable, which has not been purchased.

##### Tower Design and Spacings

Designs used in connection with the new Niagara-Dundas line were followed fairly closely in arranging details and spacings for the Dundas-Toronto section.

##### Re-stringing of Dundas-Toronto and Kitchener-Stratford Lines

This work was undertaken during the year. The Dundas-Toronto section was originally two circuits of 3/0 aluminum, which have been replaced by two circuits

of 336,000 circ. mil. aluminum, with steel reinforcement, thus adding materially to the carrying capacity and permanence of the section.

This revision has been carried to points near the west bank of the Humber River; east of that point, the only changes to date are the provision of an additional entrance to Toronto Station and the re-location of some towers in the laboratory and storehouse on the Commission's property.

The Kitchener-Stratford section was changed from one circuit of 3/0 aluminum to 7/16" diameter steel, as it is used as a tie line only.

### LOW TENSION TRANSMISSION LINES

On October 31, 1917, there were completed and under construction 1,584 miles of low tension transmission lines, of voltages varying from 46,000 to 2,200 volts.

The mileage of these lines is distributed among the various systems as follows:

Niagara System .....	983.54
St. Lawrence System .....	66.35
Severn System .....	117.69
Wasdell's System .....	65.85
Eugenia System .....	259.66
Muskoka System .....	26.32
Central Ontario System .....	64.94

In the construction of these lines 9,780 miles of wire weighing 6,492,675 pounds and 63,821 wood poles were used.

On the transmission line poles 1,321 miles of single-circuit telephone line has been erected for use in operating the system. During the year an average of 10 gangs were employed, two of which, under the direction of a forestry expert, were employed in trimming trees. These gangs constructed 263 miles of transmission line as well as distribution system in eighteen towns and villages, and rural lines in four townships.

For the above lines 108 crossing plans were prepared and submitted to telephone and railway companies for approval.

Local distribution systems were constructed by the Commission in the towns and villages of: Horning's Mills, Elmwood, Bothwell, Long Branch, Lambton, Islington, Napanee, Midland (extension), Hanover, Chesley, Victoria Harbour, Arthur, Orangeville, Grand Valley, Shelburne, Tara, Dublin and rural lines in the townships of Toronto, Etobicoke, Vaughan and Scarboro.

Although handicapped by scarcity of labor and the difficulty of obtaining material some important lines were successfully constructed in good time to the great satisfaction of the communities benefited thereby.

## SECTION III

### OPERATION OF THE SYSTEMS

#### NIAGARA SYSTEM

Continued expansion characterized the operation of the Niagara System for the year 1917.

The increasing power requirements of the existing war munitions industries, and the addition of others, together with the normal yearly growth of the municipalities' demands, severely taxed the available generator capacity at Niagara Falls. However, up to the end of October, the Commission was enabled to meet its obligations, with a few exceptions.

On November 7th, the Commission's source of power supply was augmented by arrangements with the Canadian-Niagara Power Company, whereby the output of one 10,000 h.p. generator was paralleled with two generators already in operation on the Niagara Transformer Station bus. On December 17th, a fourth generator of the same capacity was added, and on July 4th, by a regrouping of the generators at the company's plant which supply power to the Commission, one more unit was placed at the Commission's disposal, making in all 50,000 horsepower.

While the power supplied from this company was at times reduced on account of generator failures and ice trouble, the service was quite satisfactory under normal operating conditions.

On August 1st, the operation of the generating plant, transformer stations, transmission lines and sub-stations of the Ontario Power Company was placed under the supervision of the Commission, in the interests of the Ontario Power Company, and while to date no radical change has been made in the method of operation, the resulting combination promises innumerable advantages with regard to improved service and increased economy in operation and maintenance. Several changes in the physical arrangement of the plant are well under way. One purpose of these changes is to permit of direct voltage regulation from the generating station, which will fulfill a long felt want. These changes will also increase the facilities for sectionalizing trouble.

The Niagara System was visited with electrical storms on sixty-three different days during the summer. On thirteen occasions, storms were reported over practically the entire system, of which seven were severe and the balance mostly moderate. Particularly violent disturbances were reported from Niagara Falls, while very severe concentrations occurred in St. Mary's, London, St. Thomas and Chatham districts. Only one total system high-tension interruption occurred, which could be directly attributed to lightning discharges.

The performance of the transmission high-tension lines was particularly gratifying during the past year. The line conductors required little or no attention, and inspections made from time to time confirmed the belief that the cable now in operation should not be the subject of concern relative to the reliability of the service. No failures of high-tension line insulators occurred during the year, and the results of the periodic megger tests of the dielectric strength of the units shews little or no deterioration in the strings erected during the last four years.

Some very interesting comparative figures from an engineering standpoint have been obtained from the tests of the various makes of insulators erected.

As the abnormal condition of the metal market rendered the purchase of line conductors for the new tower line between Dundas and Toronto injudicious for the present, and as an unusually large increase in the load supplied to Toronto munition plants and to the Imperial Ministry of Munitions and to other plants in the vicinity of New Toronto was anticipated, the Commission decided that for the welfare of the service the cross-section of the conductor forming the two No. 3/0 aluminum circuits on the old tower line should be increased. Accordingly, preparations were made to take down the old cable for re-fabrication at the factory, and the erection of No. 6/0 steel reinforced aluminum. A considerable portion of the extra aluminum required was obtained from scrap on hand, and some by replacing the aluminum conductor on other lines with iron wire, where the conductivity of those lines was considered greater than necessary for the present. On account of the high price of aluminum, the transfer proved decidedly economical, without any impairment of the service.

The restringing of the old tower line was commenced on May 20th and was practically completed in the month of October. The cost of the work indicates that financially it was very advantageously undertaken.

While the restringing of the section was being proceeded with, the operating features of this line were improved by the erection of a wooden structure at the Cooksville high-tension station. On this structure are mounted disconnecting switches, by means of which one circuit may now be switched to the other, or either line opened for sectionalizing purposes; also permitting the Cooksville high-tension station to be fed directly from either of the high-tension lines at this point. Other construction work completed by the line maintenance gangs outside of their regular duties follow.

The four telephone circuits on the wood pole line paralleling the old tower line between Niagara Falls and Dundas to a point just north of the Welland Canal to Niagara Falls, were transferred to the wood pole line which parallels the new tower line.

The No. 3/0 aluminum cable on the high-tension section between Kitchener and Stratford high-tension stations was replaced in the spring with 7 strand No. 9 steel cable. This change was proceeded with after a rather extensive investigation of the properties of the steel cable for the transmission of electrical energy. The mechanical performance of the new conductor was very satisfactory.

The 13,200 volt feeder between the Guelph high-tension station and the Fergus and Elora taps was double circuited by the erection of a circuit of No. 3/0 aluminum cable. An air-break switch and structure was erected at the corner of York road and Victoria streets in the municipality of Guelph, for the purpose of forming a break-down connection between the Guelph 13,200-volt system and the Fergus and Elora tap line, for emergency use.

The Commission purchased and took over the Interurban Power Company, and the Erindale Power Company's properties on January 11th, and proceeded to change the method of feeding the former customers of these companies to a more economical basis. The 13,200-volt No. 0 copper circuit, between the Interurban Company's Mavety street station in Toronto Junction, and the Ontario National Brick Company's plant, was removed and placed in stock. The No. 0 aluminum cable between the Mavety street station and the Erindale powerhouse was also removed, and the aluminum cable used for the restringing of high-tension Section

B. The brick company was temporarily fed from the Cooksville high-tension station on February 11th, from a connection to the feeder supplying the Mimico and Port Credit distributing stations, and later on, from a new circuit running north from the Cooksville high-tension station and then west on Dundas street to the company's yards. The customers of the Interurban Power Company of Etobicoke Township, formerly fed from the company's sub-station in New Toronto, were finally supplied with power from the Niagara System on July 31st.

A three-phase circuit of No. 0 aluminum was strung from the switching structure No. 290, at the Village of Beachville, to the new distribution station erected a little to the west of the village. The No. 1/0 aluminum circuit between Beachville and Embro was replaced with 1/4-inch stranded steel conductor. By reason of the high market value of aluminum, the capital cost of this section was decreased by over twice the cost of the new conductor, plus erection.

The No. 3/0 aluminum conductor on the 4,000-volt circuit between the villages of Tilbury and Comber was replaced with 5/16-inch steel cable. In this case, the original capital expenditure was reduced nearly three times the cost of the steel conductor, plus erection.

The 13,000-volt circuits of the Baden distributing station were rearranged, and two air break disconnecting switches erected to accommodate the new feeder to the Village of Wellesley.

Extensions made to several of the high-tension and smaller distributing stations relieved the somewhat overloaded condition of the latter part of 1916, which permitted the station maintenance department to internally inspect and thoroughly overhaul the electrical and mechanical apparatus to provide against the anticipated increase in load during the coming winter. Failures of the station equipment were quite insignificant, and no difficulty was experienced in effecting repairs. As in the past years, several transfers of equipment from one station to another were carried out, where unexpected power demands developed.

The meter inspection department designed and erected pole-type, out-door metering equipment to measure the power supplied to the villages of Springfield and Burgessville, Zurich, Dashwood and Otterville, and indoor equipment at the Tillsonburg and Norwich municipal stations, to obtain a graphic record of the load of the rural customers from these stations. During the year a large amount of work was accomplished in connection with the tests and adjustments of meters and protective equipment in operation on the local distribution systems.

During the summer an engineer of this department made a thorough investigation of the methods of power measurement and service protecting devices, employed by some of the largest electrical corporations in the United States under actual working conditions. Where comparison is possible, it was found that the methods in use on the Commission systems are not excelled.

The tables given below shew the load demand of the various municipalities, as well as the increase during the year. The plotted curve on another page shows the monthly peak load taken by the Commission from the supply sources, from October, 1910, to October, 1917. If no shortage of generating capacity had occurred at Niagara Falls, the gradient of increase for the past year would have been very much greater.

## Niagara System

Capital Investment of the Niagara System in operation at October 31, 1917:

Right-of-Way.....	\$1,115,779 81
Steel Tower Transmission Lines .....	3,317,432 39
Telephone Lines .....	129,706 69
Relay System Lines .....	54,537 32
Wood Pole Lines .....	2,077,156 36
Transformer Stations, including conduit system (Ontario Power Co. to Niagara Station) .....	3,286,967 30
Distributing Stations .....	267,547 07
Total Operating Capital .....	\$10,249,126 94

Total Expenditures in connection with the Operation and Maintenance of Niagara System for the fiscal year 1916-17:

Operators' Salaries and Expenses, including supplies .....	\$105,955 64
Maintenance of Steel Tower Lines .....	81,241 81
“ Telephone and Relay Lines .....	9,549 12
“ Low Tension Lines .....	55,074 17
“ Transformer Stations .....	73,533 60
“ Distributing Stations .....	23,135 77
Administration.....	58,922 02
	\$407,412 13
Interest on Invested Capital .....	\$432,540 73
Cost of Power at Niagara Falls .....	1,310,713 95
	\$1,743,254 68

Summary of Financial Statement of the Niagara System Operation for the fiscal year 1916-17:

## Receipts

Power delivered, including charges for Administration, General Expense, Operation, Maintenance and Interest .....	\$2,637,606 31
---	----------------

## Disbursements

Power purchased, including losses in Transmission and Transformation, Administration, General Expense, Operation, Maintenance and Interest .....	2,150,666 81
Surplus applicable to Sinking Fund and Depreciation Reserve Account .....	\$486,939 50

### SEVERN SYSTEM

The power demand of the municipalities served from the Severn System increased 53 per cent. over that supplied during the year 1916. Parallel operation of the generating stations at the Big Chute, Eugenia and Wasdell's Falls enabled the Commission to meet the increased demand and to provide first-class service with regard to character and continuity.

No serious failures of equipment occurred in the generating station or transformer stations from lightning discharges or other causes. The transmission lines were carefully gone over during the summer and the spans sags adjusted, poles straightened and backfilled where necessary.

Negotiations were completed for the purchase from the Orillia Water and Light Commission of the seven and one-half miles of 22,000-volt single, three-phase circuit of No. 2 aluminum conductor extending from the Big Chute plant to a point approximately south of the Orillia Commission's new hydraulic power house, at Swift Rapids. From this point a circuit of No. 3/0 aluminum cable will be erected to the Swift Rapids plant, a distance of five-eighths of a mile. This tap will form the permanent connection between the Big Chute and Swift Rapids plants, thereby completing the link between the Severn and the Wasdell's System by the use of the Orillia Commission's lines as per arrangements by contract.

To facilitate operation and maintenance the switching structure at the point where the Victoria Harbor tap line branches from the trunk lines was remodelled and the single pole disconnecting switches were replaced with two-pole switches in order that the Victoria Harbor tap might be switched to either of the trunk lines at the junction point.

Another improvement of this nature was effected by the erection of two horn-gap, air-break switches in the two main 22,000-volt lines near the Village of Elm-vale for sectionalizing purposes. Two three-phase disconnecting switches were erected on the System switching structure at Waubaushene, so that the local distributing station could be served from either of the main lines at this point. A three-phase, air-break line disconnecting switch was erected on a pole structure outside of the Victoria Harbor sub-station to act as an incoming line switch at this station.

The extra right-of-way purchased along the transmission line between the Port McNicoll Junction and the Canadian Pacific Railway elevator was cleared of trees.

Switching and transformer equipment was installed at the Big Chute power house, and a small 2,200-volt distribution system was erected to supply the Department of Railways and Canals with power and light for the marine railway installed at the Big Chute plant. This system was put into commercial operation about the middle of October, 1917.

In the latter part of August the service from the original Midland station was discontinued, and resumed from the new distributing station erected adjacent to the municipality's waterworks station.

The two pole line entrance structure at the Collingwood distribution station was remodelled so as to accommodate double circuit lines from the Severn and single circuit lines from the Eugenia Systems, and also the outgoing 2,200-volt distributing circuits.

Severn System

Severn System

OPERATING STATEMENT, FISCAL YEAR 1916-17.

Capital Investment as at October 31, 1917:

Big Chute Power Development, including Generating and Trans- former Station .....	\$350,713 28
Transmission Lines .....	348,520 12
Distributing Stations .....	82,861 13
Total Operating Capital .....	\$782,094 53

Total Expenditures in connection with the Operation and Main-  
tenance of the Severn System for the fiscal year 1916-17:

Operators' and Patrolmen's Salaries and Expenses, and propor- tion of Administration and General Office Expense.....	\$31,041 21
Cost of Power purchased from Wasdell's and Eugenia Systems..	58,917 45
Interest on Capital Investment .....	32,364 54
	\$122,323 20

Summary of Financial Statement of the Severn System Operation  
for the fiscal year 1916-17:

Receipts

Power delivered, including charges for Administration, General Expense, Operation, Maintenance and Interest .....	\$172,792 75
--	--------------

Disbursements

Power purchased, including losses in Transmission and Trans- formation, Administration, General Expense, Operation, Main- tenance and Interest .....	122,323 20
Surplus applicable to Sinking Fund and Depreciation Reserve Account .....	\$50,469 55

EUGENIA SYSTEM

The second year's operation of the Eugenia System was successfully concluded on November 18, 1917, with very bright prospects for the future. The quality of service supplied was exceptionally good, the operating characteristics of the equipment in the generating and transformer stations meeting the manufacturer's guarantees very satisfactorily.

The Eugenia generating station continued to assist the Big Chute plant to supply the increased demand of the municipalities of the Severn System with any surplus capacity not required by the municipalities of the Eugenia System. The average credit in horsepower to the Eugenia System in this respect was 1,635.

The Grand Valley distributing station was made alive December 1st. This station is fed over a 22,000-volt No. 6 copper circuit from a tap off the feeder to Orangeville at Laurel Junction. The villages of Grand Valley and Arthur are served from this station with 4,000-volt power. The new distributing stations at Orangeville and Shelburne were placed in operation on February 11th and November 26th respectively. Service was formerly supplied to these customers from the old sub-stations taken over with the Pine River System.

The comparatively new transmission lines of this system were gone over carefully and the span sags adjusted and the poles backfilled and tree trimming done by the line maintenance department where necessary.

The out-going 22,000-volt lines on the pole structure at the power house were removed to conform with some alterations which were made in the high-tension equipment of the station to properly control the tie line from the Eugenia to the Severn System. To benefit operation and maintenance of the south and west portions of the system the telephone line between the power house and the Village of Flesherton was double circuited by the erection of another circuit of No. 9 iron wire. This allows for a separate telephone circuit for the south and the west parts of the system.

Flashboards were installed on the dam to give additional storage and a motor boat was purchased for maintenance use on the storage basin. Plans have been prepared for a suitable barn to be erected near the power house to properly accommodate the transportation equipment in use at this point. Considerable lumber on the Commission's property is available for this work. A water supply was provided for the operators' cottages by piping to a boxed spring on the escarpment. The approach to the power house from the south was refilled and put in good condition.

Surplus applicable to Sinking Fund and Depreciation Reserve Account .....	\$31,934 50

WASDELL'S SYSTEM

The operation of the Wasdell's Station during the past year was attended with good results. The increase of the municipalities' load, while not large, compared very favorably with that of corporations of the same population on the other systems.

The surplus capacity of the generating station was constantly required on the Severn System. Reports show that the system is in excellent operating condition, with no indication of excessive depreciation.

At the power house an addition was made to the switchboard to provide metering and protective equipment on the tie line between the power house and the Severn System. Several minor improvements were carried out by the operators at the power house, such as painting the floors, iron work, etc. A telephone booth

was erected and the telephone equipment installed to conform with the standard employed on the other systems. A three-phase horn-gap air-break, 22,000-volt disconnecting switch was erected in the Beaverton tap, near the junction, for section- alizing purposes.

A small barn was erected at the power house to house the transportation equip- ment; also a small building to serve as a machine shop for maintenance repairs. Further storage space for stock was obtained by laying a floor over a part of the gate house.

Surplus applicable to Sinking Fund and Depreciation Reserve Account .....	\$9,551 00

CENTRAL ONTARIO SYSTEM

During the past year the load on the Central Ontario System has steadily increased until in October it reached the highest peak in the history of its operation.

Extremely favourable river flow continued on the Trent River, enabling all loads to be carried without difficulty. Practically no serious interruptions occurred during the year. Probably the worst interruption was on April 6th, which was due to a snow and sleet storm, which so heavily loaded the wires that a large number of breaks were made, and service was disorganized to all towns at any distance from the generating plants.

Fortunately this trouble occurred on Good Friday, so that factories depending on the Commission's service did not suffer to any great extent.

A number of extensions have been made in the Commission's plants at various places, more particularly in the nature of refinement and improvements to the system, to enable the increasing difficulties of operation under war conditions to be met.

MUSKOKA SYSTEM

During the second year's operation of the Muskoka System, the Commission was able to improve the service supplied its customers very materially by further improvements of the equipment in the generating station.

It was deemed advisable to completely re-wind the armature of the old 450-K.V.A. generator formerly in operation at the power house. A gate house was erected and repairs and alterations were made to the gate and stop log operating mechanism. The necessary transformers, heaters and wire were purchased and installed for the purpose of heating the gate house.

The section of the 6,600-volt line to Gravenhurst between the power house and limits of Muskoka Falls village was remodelled and a lighting system, for the power house roadway, pipe lines and dam was erected on the poles of this feeder from the power house to the gate house. This work also included alterations to the distribution system for the village.

Two sets of line disconnecting switches were installed at Bracebridge and Utterson in the 22,000-volt line from the power house to Huntsville, for sectionalizing purposes. The line maintenance gang did considerable tree trimming and made all necessary line adjustments.

ST. LAWRENCE SYSTEM

The operation of the St. Lawrence System was attended with very satisfactory progress. The municipal power demands show material increases. Parallel operation of the Municipal steam plant at Brockville with the M. F. Beach Company's hydraulic plant at Iroquois was continued throughout the year with good results. The Commission has proceeded with arrangements for the supply of a sufficient quantity of power to meet the requirements of the system for some years to come.

The transformer stations and the transmission lines required no special maintenance during the year. One of the Pittsburgh Company's 26,400-volt, 250-K.V.A. transformers which was taken over from the New York and Ontario Power Company in a damaged condition, when the sub-station at Iroquois was purchased, was rebuilt and placed in operation.

### OTTAWA SYSTEM

The total load taken by the Hydro-Electric System of Ottawa for the past year shows an increase of 607 horse-power over that of the year 1916, and very satisfactory progress is reported. The power supplied by the Ottawa and Hull Power and Manufacturing Company was of unusual merit with regard to operating features.

The power supplied to the municipality under the temporary contract, since June, 1916, for the operation of the Queen street pumping station will be discontinued very shortly, when the new pumping station at Lemieux Island is placed in service. This station is now ready for test and will be put into regular operation in the middle of November and will require approximately 1,700 horse-power. The new pumping station is fed direct from the power company's generating station *via* submarine cable at 11,000 volts.

In order to supply the additional power required by the waterworks department, the Commission has placed an order with the Power Company under the original contract, for three blocks of 500 horse-power each, making a total on order of 6,500 horse-power. The Power Company has accepted the Commission's order and has agreed to the cancellation of the temporary contract for the Queen street pumping station power supply, this contract to automatically expire on the date that the Lemieux Island plant is placed in regular operation.

The Commission has completed arrangements for the installation of the necessary metering equipment at the Power Company's generating station to provide totalizing graphic records of the power delivered to the municipal electric department and to the new waterworks station and also to provide a separate record of the load taken by the latter station.

PORT ARTHUR SYSTEM

The past year's operation of the Port Arthur System was very satisfactory. The recovery of industrial undertakings and business expansion has shown a marked effect on the power demand, with the result that the Commission will find it necessary to provide several additional blocks of power from the Kaministiquia Power Company to cope with the situation in the coming winter. From a recent survey of the industrial prospects in this vicinity it is estimated that the peak load demand of the City of Port Arthur will approximate 10,000 horse-power within the next few years.

The Commission received first-class service from the Kaministiquia Power Company during the year and the joint operation of the Commission's system with the municipality's Current River station was carried out very successfully.

During the year the Commission proceeded with the erection of a wood-pole entrance and switching structure for the purpose of sectionalizing the two 22,000-volt outgoing lines to the grain elevators and to the waterworks station, thereby greatly benefiting the operating facilities of the high-tension portion of the system.

## SECTION IV

### CONSTRUCTION WORK OF THE COMMISSION

#### NIAGARA SYSTEM

#### NIAGARA POWER DEVELOPMENT

During 1917 considerable progress has been made in connection with the Chippawa-Queenston development. At the end of 1916 the location of the intake works, canal and power house had been outlined in general form. Options had been obtained and purchase made of a portion of the lands required for right-of-way purposes. Arrangements had also been completed for some of the plant required in the execution of the work. Extensive surveys had also been prosecuted, both in connection with the location of the works and the securing of the necessary properties.

#### Surveys

During the year just completed, surveys were continued, the final location of most of the work staked on the ground. A number of difficult and complicated land surveys were also made, and engineering parties were placed in residency on those divisions upon which construction work was about to commence.

The centre line of the canal was reinforced with concrete monuments and the line established by precise methods. Check levels, connecting the headworks with the power house, were also run.

A large number of deep well borings were made to establish the profile of the surface of the rock which underlies the earth formation along the greater portion of the district traversed by the canal.

Daily gauge readings of the Niagara River have been taken continuously at Chippawa, Queenston and the power house site during the year.

#### Construction Railway

For the purpose of constructing the canal and power house and as a means of disposing of excavated material and handling the large amount of construction material and plant required on the work, provision has been made for a double-track, standard gauge, electrically operated railway, which will parallel the line of the canal and extend also to the main disposal site located on the edge of the escarpment at St. Davids. Sidings, yards and loading tracks are provided for at various points.

When it was decided to electrify the eleven-mile double-track construction railway being built at this time in connection with the new Niagara Power Development, the detailed work of choosing satisfactory sub-station equipment, locomotives and designing a suitable type of overhead trolley wire was taken up.

A contract was made with the Canadian General Electric Company for the supply of six 500-k.w. rotary converters, complete with transformers and switching equipment for two sub-stations. Four of the six equipments are insulated for

1,500-volts, so that they could be used on the proposed interurban lines if the opportunity offers. The delivery of this equipment is not all that was desired, and the cost is very high when compared with figures for similar equipment purchased before the war. An attempt was made to secure second-hand equipment and to better the delivery and price, but although many plants were investigated, some as far south as the State of Alabama, still it was found impossible to secure satisfactory equipment in this way.

It was found impossible to secure prompt delivery of electric locomotives, as the usual practice of the two large electrical companies in Canada is to purchase them from allied companies in the United States, and the factories there are congested with war work. The Commission prepared designs and finally awarded the contract for twelve bodies and trucks for 60-ton locomotives to the C. E. A. Carr Company, which is having them built at the National Steel Car Company in Hamilton. Six second-hand lots of motors and control apparatus were also secured. These are now being installed on the first locomotives. A contract was given the Canadian Westinghouse Company for the remaining six locomotive equipments, which are also being built for service on the proposed 1,500-volt lines. It was felt that it would be easier to dispose of these locomotives at the completion of the work if they were built to operate on a 1,500-volt system, and in case they are not required on the proposed interurban system.

This installation is probably the largest construction work of its kind ever undertaken by electric power, and it was necessary to deviate from standard electric railway practice in many ways, the most noticeable of which is undoubtedly in the overhead trolley work. It is the intention to have locomotive cranes and other similar equipment moving up and down the track continually, and it was therefore absolutely necessary to keep the overhead wire at one side of the track or else use third-rail construction. The former method was decided upon. This, of course, required special collectors on the locomotives. This is being taken care of by mounting four trolleys on the operating cab, each provided with poles formed in such a way that the wheels will run on a wire seven feet on either side of the centre line of track.

### Offices and Utilities

With the idea of centralizing the administration as much as possible, a general office building was erected on the line of the canal to serve as executive headquarters. Nearby is located a dressing station, equipped with all modern appliances, and a large garage for motor transport services.

A complete system of telephone communication has been installed, making use of the Bell system and a local system for inter-departmental calls.

The Commission has purchased a sand-pit for the supplying of sand and gravel necessary for the manufacture of concrete.

### Construction

The past season was mainly devoted to the assembling of equipment for excavation, and the building of about fifty structures of a more or less temporary character, including bunk-houses, boarding-camps, sub-stations, powder houses, cement sheds, water tanks, and a central air compressor and electrical distributing station.

A subsidiary site for the disposal of excavation was developed during the summer at the Whirlpool Gorge. Track to the extent of six miles was constructed and ballasted, about one-half of this amount being laid in the main line and one-half in storage yards.

The main storehouse, woodworking, machine, and blacksmith shops, engine house, coal and lumber storage are all located in one yard near the centre of operations and at a point most convenient to the various railways. The yards contain car storage, sorting and unloading tracks and are connected by inter-switching transfers with the Grand Trunk and Michigan Central Railroads.

A few tracks were laid in the vicinity of the location of the forebay to serve the crusher plant and sand storage, and to facilitate the handling of machinery and building material required in the construction of the power house.

A pole line for the distribution of electric power over the whole work has been completed and placed in operation. This line extends from the intake works at Chippawa along the line of the canal to the power house. It also carries the telephone service wires, in addition to the lines used for the distribution of power.

Overhead construction work has been commenced on the construction railway.

Work has also been commenced on the construction of the rock crushing plant for supplying material for concrete ingredients and track ballast, and partial excavation has been made for storage stock piles for the crushed rock and sand.

### Permanent Construction

All permanent construction work done to date has been performed in the Whirlpool section.

Two steam shovels have been operating in the canal prism at this point since May 1917. These machines were also used in taking out excavation for the construction railway.

A start was also made on the construction of the concrete bridge to carry the Niagara, St. Catharines and Toronto Railway tracks over our canal.

In all, 170,000 cubic yards of excavation were removed and disposed of in connection with the construction work accomplished during the year.

### Generating Station

Additional discussions were carried on with representatives of different electrical manufacturing companies regarding generators, transformers and oil-switches. Preliminary designs of generators and transformers have been submitted and are being carefully considered. Schemes of connections are also being drawn up for consideration.

### Montrose Sub-Station

Instructions were received to construct a sub-station near Montrose to furnish power for the construction work on the Niagara Power Development canal.

The equipment will consist of two incoming 12,000-volt lines, an oil switch and protective equipment on each line; two 3-phase, 1,500-kv-a., 25-cycle, 46,000/26,400/13,200/4,000/2,300/575-volt transformers; and switching equipment for six 4,000-volt feeders and three 200-kv-a., 25-cycle, 2,300/575-volt transformers, to supply air compressor motors.

There will also be installed two 500-k.w. 600-volt rotary converters with their transformers and the necessary switching equipment.

The incoming line oil switches and the 4,000-volt oil-switches were purchased from the Canadian Westinghouse Company. The 1,500-kv-a. transformers, the 12,000-volt lightning arresters and the switchboard panels for the 4,000-volt circuits were purchased from Canadian General Electric Company. Weston indicating meters were purchased from A. H. Winter Joyner, Limited. The 200-kv-a. transformers were purchased from the Moloney Electric Company. The rotary converters with their transformers and switching equipment were purchased by the Commission from the Canadian General Electric Company.

Provision will be made for two additional 1,500-kv-a. transformers, three more 200-kv-a. transformers and for two additional rotary converters. All installation work will be done by the Commission.

### Whirlpool Sub-Station

Instructions were received to construct a sub-station north of Niagara Falls, Ontario, to furnish power for the construction work on the Niagara Power Development canal.

The equipment will consist of two incoming 12,000-volt lines, with an oil switch and protective equipment on each line; three 3-phase, 1,500-kv-a., 25-cycle, 46,000/26,400/13,200/4,000/2,300/575-volt transformers; switching equipment for six 4,000-volt feeders; and six 200-kv-a., 25-cycle, 2,300/575-volt transformers to supply air compressor motors.

There will also be installed four 500-k.w. 600-volt rotary converters, with their transformer and necessary switching equipment.

The incoming line oil switches and the 4,000-volt oil switches were purchased from the Canadian Westinghouse Company; the 1,500-kv-a. transformers and the 12,000-volt lightning arresters from the Canadian General Electric Company; the Weston indicating meters from A. H. Winter Joyner, Limited; the switchboard panels for 4,000-volt feeders from Northern Electric Company; the 200-kv-a. transformers from the Moloney Electric Company, Limited; the rotary converters with their transformers and switching equipment from the Canadian General Electric Company.

The installation work of the above equipment will be done by the Commission. The building, which is of semi-permanent construction, will be erected as part of the air-compressor station.

### Forebay Sub-Station

Instructions covering purchase of three 200-kv-a., single-phase, 25-cycle, 2,300/575-volt transformers for an outdoor sub-station, near the proposed forebay, were received. The order for three such transformers was awarded to Moloney Electric Company, Limited.

## STATION CONSTRUCTION

### General

#### Cooling Water Supply for Sub-Station Transformers

An extended study has recently been made looking to improvements in the water supply for the cooling of transformers in the various stations along the 110,000-volt steel tower line. Originally either a well was driven, water was collected in an excavation in the basement, or some such small system was arranged, and has been adequate until recently. Latterly, loads have increased so that it is necessary to give the matter attention and provide adequate cooling water and some reserve system for cooling of these transformers. Work during this year has been undertaken, among others, at Brant, Dundas, Kent, Kitchener and Preston stations. In some cases adequate supplies have been obtained by means of artesian wells, and in others a reserve supply has been secured by making connections to the domestic supply from the municipality which is supplied with power from the substation.

As it is desired to limit the breathing of transformers by sudden and excessive changes of temperature of oil, etc., due to change of load, an examination has been made of the application of automatic features to pumping or valve equipment so as to control the amount of cooling water supplied to the transformers in such a way that a greater quantity of water will be supplied as the load on the transformers increases.

#### Ontario Power Company Generating and Transformer Station

At the end of July, an inspection of the generating and transformer station of the Ontario Power Company was made, and conferences held with the engineers of this company regarding additional feeders to the Commission's Niagara Falls Transformer Station.

#### Hamilton Garage and Storehouse

To provide garage and storage facilities for the maintenance force at Hamilton, a building located at the corner of York and Napier streets in Hamilton was rented by the Commission, and the necessary repairs and alterations to the structure were authorized in August and completed the following month.

### NIAGARA FALLS TRANSFORMER STATION

#### Building Extension

Brief reference is made in the last Report to an extension to this building being constructed by Messrs. Wells & Gray, to provide facilities for handling larger transformers and for increased accommodation.

The extension is constructed to conform to the type of work on the original building, and contains three floors over the section not required as an erection room and repair shop, and has a basement under its entire area.

Sections of the building were partitioned off as offices, and space was provided on the second floor for maintenance stores. Work in connection with the construction, with the exception of pouring of the basement floor, which has been held up for electrical considerations, was completed early in the year.

In addition to this work, it was found necessary to provide additional supports for transformer banks where larger transformers were being installed. This work was carried out in consecutive order as installation of larger transformers demanded.

#### **Additional Transformer Equipment**

No. 8 Bank of transformers, consisting of three 7,500-kv-a., 110,000-volt units was placed in service on May 4, 1917. Contracts for three additional banks of the same rating were placed on January 31, 1917, and February 9th with the Canadian Westinghouse Company, the first bank to be placed in service about December 1st and the other two are expected to be placed in service during 1918. One of the present banks of three 3,500-kv-a., 110,000-volt transformers will be moved to a new location in No. 4 pocket, and reconnected for 46,000-volt operation. No. 3 bank of 46,000-volt transformers was placed in service on October 26, 1917. These changes will give a total transformer capacity at Niagara Station of 181,000-kv-a., including two spare 3,500-kv-a. units, one each for 46,000 and 110,000-volt service.

#### **Switching Equipment**

A new 12,000-volt bus structure has been built under contract with Messrs. Wells & Gray, of Toronto, and placed in service to take care of the four feeders from the Canadian Niagara Power Company, and also for controlling the 46,000-volt transformers. In this way the 46,000-volt load can be operated from its own 12,000-volt bus and set of feeders and, if necessary, entirely separated from the 110,000-volt system. The switching equipment for this new bus was purchased on contract from the Canadian Westinghouse Company and has been installed. Necessary temporary changes have been made in the switchboard to handle this additional equipment, and the installation of a new complete station switchboard is under consideration.

Necessary oil switches of an improved type, and other necessary switching equipment, have been purchased from the Canadian Westinghouse Company to increase the capacity of the outgoing 110,000-volt lines and also to ensure better service.

New designs for switch structures for Feeders No. 1, 2 and 3, from the Ontario Power Company's plant have been made to take care of a newer type of 12,000-volt oil switches, which are being purchased on contract from the Canadian Westinghouse Company. The construction of this work will be finished in the early part of 1918.

Eight 1,600-ampere, 12,000-volt and eight 800-empere, 12,000-volt, type "C" reactance oil switches were ordered on April 7, 1917, on contract with the Canadian Westinghouse Company. These switches are intended for future feeders, and delivery is to be made during the summer of 1918.

#### **Protection of Service**

After a careful study of the application of current-limiting reactors to the 12,000-volt bus to limit the effect of short-circuits, tenders were obtained and contracts were awarded to Metropolitan Engineering Company, Toronto, for six 2,000-ampere, 12,000-volt power limiting reactors, and to the Canadian General Electric Company for three reactors of the same rating. Orders were placed with

the Philadelphia Electric Company and the Canadian Westinghouse Company for necessary switching equipment for these reactors. Contract for the necessary concrete bus structure for this equipment was let to Messrs. Wells & Gray, of Toronto, and part of it has already been constructed. The reactors should be ready for shipment by the end of December 1917.

This work includes the installation of cables so as to form a ring-bus. It is expected to have this work completed in the early part of 1918.

#### **12,000-volt Feeders**

The cable system from the Canadian Niagara Power Company's plant, as described in the last Report, is now practically completed. The first feeder was put into temporary service about December 16, 1916. Due to adverse weather conditions this work has not been completed in all details, but will be finished about January 31, 1918. All four feeders, however, are in service; two of them on temporary connections.

A blanket order was placed with the Standard Underground Cable Company of Canada, Hamilton, for 40,000 feet of 350,000-c.m., three-conductor, stranded copper sector-shaped, lead-covered and steel-tape-armored, 12,000-volt cable on April 13, 1917. This cable is intended for additional feeders to the Ontario Power Company's plant, and for other future work.

Work was started on No. 12 feeder to Ontario Power Company, which consists of four 350,000-c.m. lead-covered armored cables and which was supplied by the Standard Underground Cable Company of Canada, on the above blanket order. This feeder will be ready to be placed into service about December 1, 1917.

Plans were finished for reinforcing No. 1 cable system from the Ontario Power Company, covering the addition of one cable to each of the existing feeders, excepting No. 1 feeder, which will be changed over to four 350,000-c.m. cables. This work will be finished early in 1918.

When the above work is finished there will be sufficient cable capacity to meet the added transformer capacity of this station, with a spare feeder in reserve.

Studies are being made in connection with the rearrangement of the incoming feeders so as to obtain improved conditions.

#### **Water and Oil Systems**

No. 3 sprinkling tank, referred to in last Report, was placed in service on June 15, 1917. New water supply headers and discharge-headers were installed, with each transformer connected so that it can be supplied with cooling water by any of the three pumps from any one of the three tanks. Plans are being prepared for the installation of a circulating pump between No. 2 and No. 3 sprinkling tanks, so as to make the cooling system more efficient during summer months. All the oil and water piping for the 46,000-volt transformers was moved to a new location back of the transformers. This change was necessitated because the space originally occupied by the piping was needed to accommodate the switching equipment.

An 8,000-gallon oil tank has been ordered and is being installed outside the station. This is to take care of the new 7,500-kv-a. transformer units.

#### **Mechanical Equipment**

A 65-ton transfer truck was ordered from the Northern Crane Works, Walkerville, to facilitate the moving of the new 7,500-kv-a. transformers. An 8-ton

chain-block was also purchased for handling the reactors and for general use around the station.

#### Storehouse

A galvanized iron storehouse, 80 by 30 feet, was constructed immediately east of the Transformer Station to store material used in construction and maintenance work.

#### General

A bunk house was designed and is being constructed to the east of the Niagara Station for the use of the military guard. Plans are being developed for a proposed extension to the Transformer Station, to take care of a double bus on the 110,000-volt system. Plans for the installation of new neutral resistance are also under consideration.

### DUNDAS TRANSFORMER STATION

#### Reconstruction

The contract for reconstruction of the section of this building which was destroyed by fire, was placed with Messrs. Wells and Gray, of Toronto, and reconstruction to replace original work was started November 1916, and completed early in the spring.

The section of the building which was destroyed was originally constructed by Messrs. Wells & Gray as an extension to the original building in 1913, and was 91 feet long by 45 feet wide by 46 feet 9 inches high, from basement floor to top of parapet wall.

Structural steel, with the exception of some sections which were not damaged by the fire, was ordered as an exact duplicate of the original steel, and was supplied by the Hamilton Bridge Works Company, from the company's original details.

Other work done at this station during the year includes changes to control room in the original building.

The work in connection with repairs to the electrical equipment damaged by the fire was taken care of by the Commission and assistance was given on the factory inspection of some of the repaired apparatus.

#### New Line Oil Switches

To provide an improved type of oil switch with greater capacity on the four 110,000-volt lines from Niagara Falls, it was decided to replace the original switches, which had been repaired after the fire, with 400-amp. round tank, reactance type "GA," 110,000-volt oil switches, which were being manufactured on contract with Canadian Westinghouse Company for the Niagara Falls Transformer Station, it having been decided to use resistance type oil switches at Niagara Falls. These reactance type switches are nearing completion at the factory and plans are under consideration covering their installation in Dundas Transformer Station.

#### Increased Transformer Capacity

Owing to the increasing load on this station larger transformers were necessary, and the decision was made in July to transfer three 2,500-kv-a. units from Toronto Transformer Station to Dundas Transformer Station as quickly as they could be released, and to house them in a temporary extension to the existing building. For this purpose a type "K-15," 110,000-volt Canadian General Electric oil switch, ordered on a stock order, was allotted to this station and this has been delivered.

Before the above-mentioned extension was started the plans were altered and decision made to take seven 2,500-kv-a. units from the Toronto Transformer Station instead of three, and to install six of them in the space occupied by the six existing 1,250-kv-a. units, and also to postpone the construction of the extension to the building until further consideration had been given to the question of additional 13,200-volt and 110,000-volt switching equipment for more lines.

Arrangements were made for the moving of the 2,500-kv-a. transformers to Dundas and for the removal of the 1,250-kv-a. units from service, and plans are being prepared to cover the changes in the station.

#### **Cooling Water Supply**

Tenders have been received and contract forms arranged for a well about 12 feet internal diameter with concrete walls carried to grade at a point about 25 feet from the south-west corner of the station. The preliminary work, i.e., the excavation to water about 8 feet below grade, has been made.

### **TORONTO TRANSFORMER STATION**

#### **No. 5 Transformer Bank**

On June 17th two Canadian General Electric 5,000-kv-a., 63,500-volt high tension, 13,200-volt low tension, 25-cycle, oil-insulated, water-cooled, single-phase transformers, together with the 110,000-volt and 13,200-volt switching equipment for connecting the transformers to the existing busses, were placed in service as part of No. 5 bank, with the spare 2,500-kv-a. transformer forming the third transformer of this bank. On August 19th the third 5,000-kv-a. transformer was placed in service in this bank in place of the above 2,500-kv-a. transformer, making a total capacity of 15,000-kv-a. for this No. 5 bank.

#### **Changes to Transformer Banks No. 3 and No. 4**

The contract was placed with the Canadian General Electric Company on January 10th for the necessary 13,200-volt switching equipment and connecting material to change or replace the existing equipment, in order to give sufficient capacity to control the six 5,000-kv-a. transformers referred to in last report as having been ordered for No. 3 and No. 4 banks.

#### **Changes to Transformer Banks No. 1 and No. 2**

On February 6th a contract was placed with the Canadian General Electric Company for six 5,000-kv-a., 63,500-volt high tension, 13,200-volt low tension, 25-cycle, oil-insulated, water-cooled, single-phase, transformers. These transformers will be used to replace the existing 2,500-kv-a. transformers in banks No. 1 and No. 2. When these are installed the total capacity of this station will be 75,000-kv-a. A contract was also placed with the Canadian General Electric Company for the necessary 13,200-volt switching equipment and connecting material to change or replace the existing equipment, in order to give sufficient capacity to control these 5,000-kv-a. transformers.

It was decided to install in transformer pockets No. 1 and No. 2 the 5,000-kv-a. transformers which were purchased for pockets No. 3 and No. 4. For transformer bank No. 1 the changes in switching equipment were completed and the first 2,500-kv-a. transformer was replaced on October 18, 1917. The changes will be completed early in November, thus increasing the capacity of this No. 1 bank from 7,500-kv-a. to 15,000-kv-a. The 2,500-kv-a. units will be transferred to Dundas Transformer Station.

In order to accommodate the north transformer in this No. 1 bank, it was necessary to remove the brick wall between this No. 1 bank and the erection room. Arrangements are being made to replace the upper part of this wall with a heavy screen, in order to avoid possible contact between equipment or workmen in the erection room with the high tension and low tension connections for this transformer bank. In order to accommodate the north transformer in bank No. 2 it will also be necessary to remove part of the wall between No. 1 bank and No. 2 bank. A few minor changes in the connections of the oil and water piping to the 5,000-kv-a. transformers were necessary, and same were carried out by Messrs. Sheppard and Abbott, Toronto.

#### **1917 Extension for High Tension Line Switch**

On July 25th a contract was placed with Messrs. Witchall & Son, for the construction of an extension on the south end of the building. This extension is 20 feet, 2 inches wide by 18 feet, 9 inches long by 20 feet 8 inches high, inside dimensions, and is made of pressed brick with a concrete foundation to match the present building. Messrs. Witchall & Son supplied all the building material for this extension excepting the structural steel, which was supplied by Messrs. McGregor & McIntyre, Limited. The portion of the transformer station wall which forms the north side of this extension was removed, and a door placed in west wall of lobby as an entrance to this extension. This work is now completed excepting for the concrete bases for the 110,000-volt oil switch. This extension is for the purpose of housing one type "K-15," 110,000-volt oil circuit-breaker, together with the necessary disconnecting switches and line entrances for one 110,000-volt line into this station. This line will be connected through choke coils to one of the present incoming lines. The oil switch, together with its bushing type current transformers, was supplied from a stock order, for which the contract had been placed with Canadian General Electric Company some months previous. The necessary insulators were supplied by the Ohio Brass Company from a stock order which had been previously placed with this firm, while disconnecting switch blades and jaws were supplied by the Canadian Westinghouse Company for mounting on the Ohio Brass Company's insulators by fittings which were supplied by the Commission. The oil switch is now delivered at Toronto Station and the insulators and disconnecting switches are expected during November.

Arrangements are also being made to install disconnecting switches in the 110,000-volt bus between transformer banks No. 4 and No. 5, and between banks No. 2 and No. 3. In order to make these disconnecting switches accessible for operation, an operating platform ten feet high will be installed.

#### **Increased Carrying Capacity of Incoming Lines**

To take care of the increased line currents when all the transformers which are on contract for this station are installed, arrangements are being made to supply 400-amp. current carrying parts to replace the existing 200-amp. parts for the Westinghouse type "GA" 110,000-volt oil switches and for all the General Electric 110,000-volt disconnecting switches.

#### **Mechanical Equipment**

Owing to the increased weights of the 5,000-kv-a. transformers, it became necessary to strengthen the supports under the crane in the erection room. This work was undertaken by Messrs. McGregor & McIntyre, of Toronto, and completed in December 1916.

The new transformer truck mentioned in last Report was received and used during installation of the larger transformers.

#### **Synchronous Condenser Installation.**

On October 6th authorization was given by the Commission for the purchase and installation of synchronous condensers of a total capacity of 8,000-kv-a. Negotiations are proceeding for the purchase of two 4,000-kv-a. units, which it is proposed to install in a separate building to be erected adjacent to the present transformer station, also for the auxiliary equipment necessary for their operation.

### **PRESTON TRANSFORMER STATION**

#### **1916 Extension**

The contract for the construction of the extension to the present building referred to in the last Report was awarded to Messrs. John Hayman & Sons, of London, in November 1916, the contract for the steel work being awarded to the Dominion Bridge Company. The building was completed in June 1917. The extension is 34 feet by 56 feet by 36 feet high and matches the original building.

By partitioning off the old service room and putting in a second floor, a control-room and wash-room were made on the main floor, and a service-transformer-room and battery-room on the second floor.

Plans for the required changes in the electrical equipment were completed, provision being made for two 110,000-volt banks of 750-kv-a., single-phase transformers with switching equipment; one 4,000-volt and seven 13,200-volt outgoing feeders and one spare 13,200-volt feeder; also one service transformer feeder. All oil switches are to be electrically controlled from the main switchboard.

The high tension switching equipment for the second bank of transformers, and part of the 13,200-volt equipment is being transferred from Stratford Transformer Station. The 13,200-volt feeder switches will be transferred from Niagara Transformer Station as soon as released from service there. The remaining switching equipment was purchased from the Canadian General Electric Company and Canadian Westinghouse Company.

Four 750-kv-a., 63,500/13,200-volt, single-phase transformers were transferred from Stratford Transformer Station to this station and three of these were placed in service temporarily at 6,600-volts, as a second bank directly in parallel with the first bank on December 24, 1916, the fourth one being a spare to replace one of the original transformers which was transferred to Kitchener Transformer Station. Three 75-kv-a., 13,200/575-volt single-phase Packard Electric Company transformers transferred from Baden Distributing Station, will be used as service transformers, feeding three 7½-kv-a., 550/110-volt, single-phase lighting transformers and station-heating and power circuits. Three 20-kv-a., 13,200/2,200-volt, single-phase Canadian General Electric Company transformers which were transferred from Breslau Distributing Station to a temporary location at Preston Transformer Station on May 6, 1917, to supply a 4,000-volt feeder to Breslau, will eventually be placed in the service-transformer-room mentioned above. A 60-cell "E9" Tudor storage battery and 7-kw., 125-volt, d.c. motor generator set for charging the battery, were purchased from the Canadian General Electric Company, and will supply the necessary current for switch-control-circuits.

All installation work on the switching equipment will be done by the Commission. This work is not yet completed, as it was delayed by pressure of work in other stations, and on account of inability to obtain prompt delivery of equipment ordered.

### Cooling Water Supply

By drilling an 8-inch hole approximately 130 feet deep, a flowing well has been secured for this station. This well has been connected to the existing circulating pumps in the basement.

## KITCHENER TRANSFORMER STATION

### Cooling Water Supply

A well about 26 feet from the north wall of the station has been drilled to a depth of about 160 feet. A motor operated deep well pump will be placed in a sub-grade pump house directly over the well. The motor in this case is wound rotor type. At full load speed the pump will have a capacity of 97 Imperial g.p.m. It is the intention to automatically control the speed by means of a thermostat immersed in the transformer oil. The pump and motor have been ordered and the automatic control apparatus is being investigated. An emergency connection to the city mains has been laid out and tenders for the work have been secured.

## STRATFORD TRANSFORMER STATION

Early in this year the four 750-kv-a., 63,500/13,200-volt transformers were transferred from this station to Preston Transformer Station, and arrangements are now being made to also remove the 110,000-volt switching equipment for this bank of transformers to Preston Transformer Station for use there.

In order to have all feeders out of this station operate at 26,400-volts, as referred to in the last Report, it was necessary to supply new service transformers. For this purpose a contract was placed with the Canadian General Electric Company on June 29th for two 75-kv-a., 26,400 or 13,200-volt delta high tension, 4,000-volt star or 2,300 or 575-volt low tension, 25-cycle, oil-insulated, self-cooled, 3-phase, outdoor type transformers. Shipment of these transformers was promised for the end of October. These transformers are to be connected for 575-volts on the low tension from which the electric heating circuits for the station will be taken, and three 5-kw., 550/110-volt service transformers will be used for the lighting, water pumps, etc. Arrangements are being made to install one additional 26,400-volt feeder in this station. At present all the oil switches in this station are hand operated, and plans are now under consideration for the electric operation of all the existing 26,400-volt and 110,000-volt oil switches, and also the moving of the existing switchboard to the service room. It is expected that this station will be changed over to 26,400-volts on the outgoing feeders early in 1918.

## ST. THOMAS TRANSFORMER STATION

### Railway Equipment

The observation of the operation of the 1,500-volt direct current rotary converters was continued. To afford additional protection, two direct current electrolytic lighting arresters were purchased from Canadian General Electric Company and connected directly across the commutators of the two 500-k.w. rotary converters.

Owing to the load carried by the rotary converters at this station, it was deemed necessary to add a third unit, and plans were prepared showing this additional equipment. One Canadian Westinghouse Company 500-k.w., 1,500-volt direct current rotary converter with a bank of three 185-kv-a., 13,200/920-volt transformers and switching equipment in the Horton street Sub-station of London

Public Utilities Commission were purchased from the London Utilities Commission and removed to St. Thomas Station, being installed there as unit No. 3. The necessary additional switching equipment was purchased from the Canadian Westinghouse Company. The removal of apparatus from London and the erection and installation of it, with the other equipment was done by the Commission. This No. 3 unit was put in service on June 27, 1917.

#### **Additional Feeder Equipment**

The installation of the two additional 13,200-volt feeders mentioned in the last year's Report, has not yet been entirely completed, owing to part of the equipment ordered being temporarily used for some more urgent work.

#### **Rotary Converters**

The Canadian Westinghouse Company 500-k.w., 1,500-volt rotary converter No. 2, with its switching equipment, three 185-kv-a., 13,200-volt high tension, 920-volt low tension, 25-cycle, single-phase, transformers, and one 1,500-volt electrolytic arrester were purchased from the London Public Utilities Commission and removed by the Commission to the St. Thomas Transformer Station in June.

### **COOKSVILLE TRANSFORMER STATION**

The Commission has purchased from the Toronto Hydro-Electric System a 25-60-cycle frequency changer set of 1,000-kv-a. rating, 12,500-volts, 3-phase, 300 revolutions per minute, built by the Lancashire Dynamo and Motor Company, formerly in operation in a sub-station at Mavety street, Toronto. This machine was dismantled and removed to Cooksville Transformer Station, and is being installed in a corrugated sheet steel annex 33 feet by 28 feet in size.

The set consists of the 1,000-kv-a., 25-cycle and 60-cycle synchronous machines, an exciter and a 2,200-volt starting induction motor, all directly mounted upon the same shaft.

The switchboard, switching and metering equipment, which was originally installed with this set in West Toronto in 1913, was built by the Ferranti Electric Company and was removed to Cooksville also.

The three 50-kv-a., 13,200/2,200-volt Siemen's transformers were transferred from the old Beachville Distributing Station and are being installed in the annex to supply the starting motor.

Power is to be taken from a 13,200-volt, 60-cycle line from the former Erindale Power Company's station, now owned by the Commission, and fed into Niagara System at 25-cycles through this set to the Cooksville Transformer Station 13,200-volt bus.

When not being used as a frequency changer, the 25-cycle end of the machine may be used as a synchronous condenser, on the Niagara System for power factor correction.

The erection of the annex and the installation work on the electrical equipment is being done by the Commission.

### **BRANT TRANSFORMER STATION**

It was decided to remodel the existing 26,400-volt oil switches in this station by putting on heavier tanks, and orders for the necessary parts were placed in March and April with the Canadian Westinghouse Company. Further consideration of the oil switches in this station led to the decision to change them to elec-

trical operation and to install a storage battery and charging set for this purpose. The necessary parts for electrical operation of the 26,400-volt and 110,000-volt switches were ordered from the Canadian Westinghouse Company in April and June. An Edison storage battery type "G-6" was ordered in June from the Edison Storage Battery Company. The 10-k.w., 125-volt direct current generator directly connected to a 15-h.p., 220-volt induction motor, was ordered from the Canadian Crocker-Wheeler Company in August.

Plans are now being prepared for the necessary switchboard for the battery and also for adding differential relay protection to the 1,250-kv-a., 63,500/26,400-volt transformers.

The extension for a second 110,000-volt line, referred to in the last Report, has been postponed.

#### **Cooling Water Supply**

The old reciprocating pump has been removed and has been replaced by a motor operated deep well pump rated at 27 Imperial g.p.m. The matter of increasing the water supply is receiving attention.

### **KENT TRANSFORMER STATION**

#### **Cooling Water Supply**

It was decided to discard the compressed air method of supplying water to the cooling pond and to install a 3-h.p. motor driven deep well pump having a capacity of 27 Imperial g.p.m. in a subgrade pump house adjacent to the eastern wall of the station. An emergency connection has also been made to the city main in front of the station. The piping has been interconnected so that the centrifugal pumps can pump either from the cooling pond or the city mains and the deep well pump can pump from the deep well to the transformers or to the cooling pond.

### **YORK TRANSFORMER STATION**

A site was procured on Church street, a short distance north of Mimico, for the erection of this station.

A number of studies were made up on the electrical layout and preliminary building plans prepared. The designs are now being prepared.

The preliminary plans provide for two incoming 110,000-volt lines, two banks of 5,000-kv-a. transformers and six outgoing 26,400-volt or 13,200-volt feeders. Provision is also being made for low tension service transformers and several local 2,300-volt feeders. All oil switches will be electrically operated and controlled from the main switchboard.

### **MUNICIPAL WORK**

During the year engineering assistance in connection with extensions to systems and operation difficulties was given to the following municipalities:—

Bothwell, Blenheim, Burford, Caledonia, Comber, Dresden, Hagersville, Lynden, Pt. Dalhousie, Simcoe, Ridgetown, Thamesville, Tilbury, Waterford, Wyoming, Ayr, Brampton, Drumbo, Dutton, Elmira, Elora, Fergus, Goderich, Harriston, Milverton, Mitchell, New Hamburg, Plattsville, Seaforth, St. George, Thamesford, West Lorne, Woodstock.

### Ailsa Craig

The annual report of auditor shows the municipality's local electric distribution system to be in substantial condition. Two farmers are also served from the 4,000-volt feeder.

A contract was secured with the local flour and chopping mill for a 75 h.p. motor, and engineering assistance given in regard to the extensions to serve new customers and also regarding operation.

### Aylmer

With reference to the delivery of 4,000-volt power to the municipality at \$39 per horse-power per annum, and of the cost of a new distribution system to receive the power, estimates were prepared and submitted to the Water and Light Commission.

#### Distributing Station

Arrangements having been made to supply the Aylmer Water & Light Commission with power, plans were prepared and material ordered for the sub-station.

In the present waterworks and generating station of the municipality, a bank of 13,200/23,000-volt, single-phase transformers connected delta-star and a switch-board panel will be installed, and switching and metering equipment, all of Siemen's manufacture, is being transferred from the old Beachville distributing station and will be installed here.

In addition a 4,000-volt feeder will supply the municipality of Springfield. For this service a panel, switching and metering equipment is on order from the Canadian Westinghouse Company.

All installation work will be done by the Commission.

#### Street Lighting

For the new street lighting system which is now being installed in this municipality, the Commission recommended the use of gas-filled incandescent lamps on a multiple circuit. The proposed system will provide 140 units of 100 watts each and 12 units of 350 watts each.

#### Waterworks

The probable cost of installing a new electrically driven pump for domestic supply with and without automatic attachments, and of two fire pumps, one to be driven by an electric motor and the other by a gasoline engine, was investigated. Estimates were submitted and a recommendation was finally made that an electrically driven domestic pump and a gasoline fire pump should be installed.

The town having approved of this, the necessary specifications were issued and tenders were obtained. An order has been placed with the Storey Pump and Equipment Company of Toronto, for one 4-inch, 2-stage centrifugal pump for domestic supply, direct-connected to an automatically-controlled 20-h.p., 3-phase, 25-cycle, 550-volt, 1,500 r.p.m. induction motor, and an 8-inch, 3-stage, centrifugal fire pump, direct-connected to a 4-cylinder, 6 by 6-inch, 1,500 r.p.m., Van Blerck gasoline engine.

The fire pump will replace one of the present steam fire pumps, and the domestic unit will supply the town's ordinary requirements.

### Baden

#### Distributing Station

The three 75-kv-a., Packard Electric Company transformers in service in this station were transferred to Preston Transformer Station in February, being replaced at that time by three 150-kv-a., 13,200/2,200-volt, 25-cycle, Canadian Crocker Wheeler transformers, purchased from the Municipality of Seaforth. The necessary changes in switching and connecting material were made at the time. All work was done by the Commission, being completed on February 11th.

### Beachville

#### Distributing Station

On account of the increase of the load on the Standard White Lime Company's 2,300-volt feeder, which was approximately two miles in length, it was decided to build a new sub-station with increased transformer capacity, and if possible, to locate this station on a site nearer to the White Lime Company's quarries.

The Commission, therefore, procured a site outside the Beachville Municipality, but close to the quarries, on which a standard type "D.L." distributing station building was erected by Wells & Gray, of Toronto.

The transformers installed, which were transferred from the Embro Distributing Station, are three Canadian General Electric Company, 75-kv-a., 13,200/2,300-volt, single-phase, 25-cycle units.

The switching and metering equipment, which is of Siemen's manufacture, was transferred from the Breslau Distributing Station.

Power is supplied over a 13,200-volt line from Woodstock Transformer Station, and two 2,300-volt outgoing feeders are provided, one to the Standard White Lime Company and the other to the Municipality of Beachville.

The new station was put in operation October 26th.

After being taken out of service, the old Beachville Station was dismantled, the switching and metering equipment, which is also of Siemen's manufacture, was transferred to the new Aylmer Distributing Station and the three 50-kv-a., Siemen's transformers were transferred to Cooksville Transformer Station.

All electrical work was done by the Commission.

### Brantford Township

During the year the distribution system in Brantford Township, owned by the Western Counties Electric Company, was purchased by the Township. This system was remodelled and extended under supervision of the Commission. It is expected that power will be turned on early in January 1918.

### Breslau

The line from Preston serving Breslau was changed to 4,000 volts and the station transformers moved from Breslau to Preston. This has enabled the Commission to supply energy to various farms en route, and about twenty new customers have been obtained along the line and in Breslau.

#### Distributing Station

As the load on this station did not require the capacity of the transformers installed, the three 75-kv-a., Westinghouse 13,200/2,300-volt transformers originally installed in this station were removed to Acton Distributing Station by the Commission. They were replaced with three 20-kv-a. Canadian General Electric

13,200/2,300-volt transformers taken from stores. It was later decided not to continue operation of this station. Arrangements have been made to feed the Municipality of Breslau from the Preston Transformer Station. These 20-kv-a. units were transferred, on May 6, 1917, to Preston Transformer Station and the station operation discontinued.

The entire switching equipment in Breslau Distributing Station was transferred to the New Beachville Distributing Station.

### Brigden

The construction of a standard outdoor pole-type distributing station was authorized in April to supply power to Brigden. The equipment consists of Hydro-Electric Power Commission standard air-brake switch, Delta-Star fuses, choke coils and arrester, one 50-kv-a., 3-phase, 26,400/13,200/4,000/2,300/575-volt, 25-cycle Moloney Electric Company transformer, and one 4,000-volt feeder protected with expulsion fuses. The metering equipment consists of a Canadian General Electric graphic recording wattmeter with suitable instrument transformers housed in a corrugated metal meter house.

All construction work is being done by the Commission and the station will shortly be placed in operation.

### Chatham

The Chatham system power load was considerably increased during the year, partly by munition plants and partly by flour mills, which formerly used steam equipment operated by gas-fired boilers, the gas supply in Western Ontario having failed during the fall of 1917.

### Clinton

A more favorable showing has been made in Clinton. This was due to the expiration of old contracts assumed when the Commission turned on power. Additional power has also been requested for the flour mill. The consumers were given a reduction in rates during the year.

### Dashwood

Estimates were prepared giving a price of \$56.75 per h.p. per annum for 50 h.p., delivered at 4,000 volts.

The Commission designed and supervised the installation of the local distribution system. Assistance was also given regarding a layout for the installation of the local flour and chopping mills 50 h.p. motor.

Power was turned on during the month of August 1917.

### Drayton

The enabling and money by-laws were submitted and passed, and a contract entered into with the Commission for 100 h.p. at \$60.45 per h.p. per year. Upon the request of the village the Commission valuated the local system, which was owned by the Canadian Flax Mills Company, and assisted in the purchasing of the distribution system. Material for the new system has been ordered and is now being installed. It is expected power will be turned on early in 1918.

### Dublin

The distribution system was built and Hydro power turned on in the police village of Dublin during the year. The contract was for 50 h.p. at \$47.91 per h.p. per year. There is at present one 20 h.p. motor in addition to the lighting.

#### Distributing Station

The construction of a standard pole type distributing station was authorized in December. The equipment consists of two Hydro-Electric Power Commission air-brake switches to take care of the two incoming lines Delta-Star fuses and choke coils, one 50-kv-a., 26,400/13,200/4,000/2,300/575, 25-cycle, 3-phase Moloney Electric Company transformers, and one 4,000-volt feeder protected by expulsion fuses.

The metering equipment consists of a Canadian General Electric Company graphic wattmeter with instrument transformers, housed in a corrugated metal meter-house. The construction work was done by the Commission, and the station was placed in service on September 23rd.

### Dunnville

A new distribution system and sub-station were constructed in Dunnville during the year, and it is expected that the system will be connected to the Niagara System early in the coming year. Dunnville will be supplied with power from the Welland district at 46,400 volts.

#### Municipal Station

Following the decision of the Town of Dunnville to purchase power from the Hydro-Electric Power Commission of Ontario, and at the request of the local authorities, plans and specifications were prepared covering a new building approximately 40 feet long by 19 feet wide by 22 feet high, as an extension to the existing power-house, to be constructed of brick with a concrete foundation. Tenders were called for and recommendations made, and on July 4th the contract for the building was placed by the local commission with Mr. Robert Bennett, of Dunnville.

Drawings and specifications were also prepared and tenders requested for three 150-kv-a., 26,400 or 13,200-volt high tension, 2,300 or 575-volt low tension, 25-cycle, oil-insulated, self-cooled, single-phase transformers, and for switching equipment to control one 45,700-volt incoming line, one bank of three 150-kv-a. transformers and one 4,000-volt feeder. At a meeting on January 30th, the Dunnville Public Utilities Commission awarded the contract for the delivery and installation of the transformers to the Canadian General Electric Company, and for the delivery and installation of the switching equipment to the Canadian Westinghouse Company. Two 16-k.w. street-lighting transformers with control panels have been ordered from the Canadian General Electric Company and will be installed by the Commission.

The building is practically completed; the transformers will be installed during November, and the street-lighting transformers with their panels have been shipped, and will be installed at the same time as the main switching equipment, which will be shipped during January 1918.

## Embro

### Distributing Station

Authorization was obtained to purchase a 50-kv-a., 3-phase, 25-cycle, 13,200/2,300-volt transformer for this station to permit the three 75-kv-a., 13,200/2,300-volt transformers previously installed being transferred to the new Beachville Distributing Station. A 50-kv-a. transformer was therefore ordered from Packard Electric Company, St. Catharines, and was installed and placed in service by the Commission on August 16th. The three 75-kv-a. units were then shipped to Beachville.

## Etobicoke Township

The Interurban Electric Company, having gotten into financial difficulties, the portion of the company's plant lying west of the Humber River was taken over and operated by the Commission. Plans were prepared covering the rebuilding of these lines and their connection with systems in various parts of the township which had previously been built by the Commission and operated by adjoining municipalities. The work of rebuilding and extending these lines is now well advanced, and when completed will form the most extensive township system receiving power from the Commission, the lines being over 38 miles in extent and serving some 600 customers.

### Temporary Distributing Station

The temporary station referred to in the previous Report was erected on the site obtained for the permanent station on the north-west corner of Birmingham and Ninth streets, New Toronto. This temporary building is a frame structure covered with corrugated iron, and is approximately 36 by 15 feet, and is so located on the lot that it does not interfere with the construction of the permanent station.

Two 13,200-volt lines from Cooksville feed into this station through automatic oil switches, with lightning arresters on each line. A 13,200-volt feeder is taken out through a standard air-break switch, to the Mimico Distributing Station. Three 2,300-volt feeders supply power to Goodyear Rubber Company, Brown's Copper & Brass Rolling Mills, Ltd., and to the Municipality of New Toronto.

Instead of using the 300-kv-a. Johnston and Philips transformers mentioned in previous Report, a contract was placed with the Moloney Electric Company for three 750-kv-a., 3-phase, 26,400/13,200/4,000/2,300-volt transformers on December 6, 1916. Two of these were installed and the station put into operation on June 2, 1917. One of these transformers failed on September 21st, and was replaced by the third one, and the damaged transformer returned to factory for repairs. It is expected that it will be ready for shipment by the first of next year.

The building was erected and electrical equipment installed by the Commission and will be used until the permanent station is ready for service, when it will be dismantled and the apparatus used in other stations.

### Permanent Distributing Station

Building plans and specifications were prepared for the construction of a distributing station in New Toronto, and the contract for the building awarded to Witchall & Son, Toronto. The structural steel was ordered separately from McGregor & McIntyre of Toronto.

The building is 73 feet by 32 feet 5½ inches by 43 feet 6½ inches high, above ground level, and is of red pressed brick, with stone trimming and steel sash windows. Special large ventilator windows were placed in the wall back of the transformers, and also special ventilators were built on the roof on account of self-

cooled transformers being used. The building is being erected on the corner of Birmingham and Ninth streets, New Toronto, and will be completed early in January.

The building is designed to accommodate four 1,500-kv-a., 26,400/13,200/4,000/2,300-volt, 3-phase, self-cooled transformers with switching equipment for same and for four incoming 26,400-volt, 3-phase lines, and twelve outgoing 2,300-volt feeders, and service transformer equipment. A transformer erection room is also provided at one end of the building, with crane rails on which a 20-ton chain hoist will for the present be supported on a special frame with provision, later on, for installing a crane.

Plans and specifications were prepared for the switching equipment to control an immediate installation of two incoming 26,400-volt lines with provision for two future lines; two 1,500-kv-a., 3-phase transformers with provision for two future transformers; eight outgoing 2,300-volt feeders; one bus tie and one service transformer feeder, and provision for three future feeders. A double 2,300-volt bus will be provided with selective disconnecting switches permitting any transformer or any feeder to be connected to either bus. All oil switches will be electrically operated and controlled from the main switchboard.

The control room in which the switchboard will be located, the office room and the power transformers will be on the main floor. The low tension switching equipment will be located on the second floor directly above the control room, and the high tension switching equipment will be on the third floor. The battery and motor generator set will be located in the basement, where space is also provided for oil tanks and pumps. A partition in the basement under the transformers forms an air duct for cooling the transformers by forced draft, if found necessary.

The station will be operated at 13,200 volts until the proposed York Transformer Station is put in operation, when it will be changed to 26,400 volts.

Tenders were requested for transformers and the electrical equipment required, and a contract was placed in November 1916, with the Canadian Crocker-Wheeler Company for two 1,500-kv-a., 26,400/13,200/4,000/2,300-volt, 3-phase, 25-cycle, self-cooled transformers to be delivered and erected in the station. The contract for the low tension switching equipment to be installed in the station was awarded to the Canadian General Electric Company, September 4, 1917. They are also to supply the high tension equipment, which, however, will be installed by the Commission. Recording meters were purchased from the Canadian Westinghouse Company and Weston indicating meters from A. H. Winter Joyner Co., of Toronto.

A 100-cell "G-4" Edison storage battery was purchased from the Edison Storage Battery Company, Orange, New Jersey, and the 7½-k.w. motor generator set for charging this battery was purchased from the Canadian Crocker-Wheeler Company of Toronto.

It is expected that this station will be completed early next year.

### Exeter

This municipality has made good progress in the short time they have been operating. The local plant is well looked after and the auditor's report showing a good surplus.

The local flour and chopping mill has been electrified, and it is expected that the owners of the salt well will at once place an order for a motor. A large number of lighting customers have been added during the year.

Engineering assistance was given with reference to extensions to the municipal system as well as in its operation.

#### **Distributing Station**

The 13,200-volt electrolytic lightning arrester ordered in August, 1916, from the Canadian General Electric Company, was delivered and installed in March.

#### **Hensall Feeder**

The panel and equipment for controlling the 4,000-volt feeder to Hensall were installed by the Canadian General Electric Company in January and were placed in service. Power, however, was first delivered to Hensall through temporary connections on December 21st.

#### **Zurich and Dashwood Feeder**

The order for an additional panel and equipment for controlling a 4,000-volt feeder to Zurich and Dashwood was given to the Canadian General Electric Company on March 24th, and the installation was completed by the Commission on October 29th. This feeder will be connected into service during November.

#### **Forest**

The type "H" station referred to in last Report was completed and placed in service on February 7th.

#### **Galt**

The operating conditions with 10,400-volt, 4-wire, 3-phase, power, delivered to the municipality was investigated, and estimates were prepared for the local system's changes, also on the changes at present-day prices to receive 13,200-volt power.

The most suitable location for a new main sub-station was gone into with the local management and the building drawings looked over for the new sub-station. The proposed electrical layout was considered, and a report of the same was made to the management of the Galt Hydro-Electric Commission. It was decided that the local system should not go ahead this year with the erection of a new sub-station.

Assistance was given during the year in matters pertaining to the operation of the local system.

#### **Waterworks**

Tests on the two motors and the direct-connected pumps in the Galt Waterworks pumping station were made by the Commission.

#### **Glencoe**

An engineer visited the municipality in June and estimates were prepared on a supply of 150 h.p. for the municipality, but as the local flour mill was burned in July the requirements for the municipality were limited to 50 h.p. The municipality was given an estimate on 50 h.p. delivered at 4,000 volts.

No further action has been taken by the municipality to secure power from the Commission.

#### **Guelph**

During the year engineering assistance has been given the municipality from time to time, notably in arranging for a breakdown connection to the 13,200-volt line to Fergus and in arranging for increased station capacity.

### **Municipal Station**

Engineering assistance was given to the Board of Light and Heat Commissioners of Guelph in connection with the purchase and testing of one 225-kv-a., 13,200-volt delta high-tension, 2,300 or 575-volt delta low-tension, 25-cycle, oil-insulated, self-cooled, 3-phase transformer. The contract was placed on behalf of the above Commission with the Canadian General Electric Company in February, and the transformer has been tested and will be shipped early in November 1917.

In July, at the request of the local Commission, prices were obtained on one 550-kv-a., and one 225-kv-a., 3-phase transformer, and on their instructions, a contract was awarded in August to the Canadian General Electric Company for both transformers, delivery to be in August 1918.

### **Hamilton**

In addition to a large addition in domestic and commercial customers during the year, a very important power load was added in the National Abrasives Company, whose contract amounts to 2,700 h.p. This load will be put into operation early in the coming year if sufficient power is available.

### **Hensall**

This municipality has contracts signed for 112½ h.p., and when this load is all on the municipality will be in good condition. Assistance has been given the local system from time to time in regard to contracts, extensions and operations.

### **Highgate**

The system has shown very satisfactory results for the year, and arrangements are being made to supply the local flour mill with Hydro power.

### **Hespeler**

Assistance was given the local Commission on various matters pertaining to the operation of the local system and on extensions to the same.

At the request of the municipality complete tests were made on the domestic turbine pump and on the fire turbine pump, and a report submitted on this.

The operating conditions with 10,400-volt power, 4-wire, 3-phase, delivered to the municipality and the R. Forbes Company, Limited, was investigated and estimates made regarding the changes to the local system, and the company, also, on changes necessary to receive 13,200-volt power along the lines of present-day prices.

### **Ingersoll**

The load for October this year was 858 h.p. taken at 88 per cent. power factor. During the year the distribution system was rebuilt in certain sections to improve the local conditions.

An overdraft in the bank of \$15,000 four years ago has been changed to a surplus of \$4,000 without the issue of additional debentures, so that the financial condition of the local system is in excellent condition.

The installation of Ingersoll's White Way was completed in January 1917. It consists of twenty-six ornamental cast iron standards of the pendant type with lamp fixtures equipped with bowl refractors. The 1,000 c.p. gas-filled lamps are of 20-ampere rating and are connected to the 6.6-ampere series circuit through

individual transformers located at each standard. The circuit is carried in lead-covered cable drawn into fibre conduit laid under the concrete sidewalk.

The transformers are buried in the ground beside the ornamental standards and the high voltage, therefore, is confined below the street surface. A 22-k.w. constant-current transformer was purchased to provide extra capacity required in part by the new installation.

Cable and cable terminals were supplied for underground distribution feeders out of the municipal sub-station.

### Kitchener

The Hydro Department shows a decided increase in load, and additional equipment has been put in service in order to meet the demand. Requests for about 2,000 additional h.p. have been received during the year.

### Listowel

During the year the distribution system has been completed to supply power and lighting customers. The ornamental street light has been extended and an electrically-driven pump installed in the waterworks.

### London

The load during the year has increased from 7,359 h.p., taken in October 1916, to 9,142 h.p., taken in October 1917, or an increase of approximately 24 per cent. During the year assistance was given in connection with extensions to the local system and in operation of the same. The local system is taking care of a large cooking load, and the customers are very well pleased with the results and the cost of the electric current for this purpose.

The financial report for the year shows a good condition.

### Office Building

Engineering assistance in connection with the plans of the new office building was given to the Public Utilities Commission.

### Horton street Station

At the request of the Public Utilities Commission, of London, engineering assistance was given by the Commission in connection with the planning of an extension to this station.

When considering increased capacity for this station, it was decided to rearrange the whole existing equipment and the layout. Instead of buying more transformers, each of the capacity of 250-kv-a., it was decided to buy 1,500-kv-a., 3-phase transformers, and to replace the existing 13,200-volt oil switches and the more important 2,300-volt oil switches with switches having a considerably larger rupturing capacity. In order to accommodate this rearranged switching equipment and the larger transformers, an extension to the building, 30 feet wide by 83 feet long by 30 feet high (approximate inside dimensions), with a basement 83 feet long by 13 feet wide under the low tension switching equipment, is necessary. The transformers, with the switchboard and low tension switches, will be located on the main floor, with the constant current transformers and the potential regulators. The 13,200-volt equipment will be located on the second floor. This new arrangement will include a duplicate 13,200-volt bus. Each feeder to this bus will have one oil switch, with a set of selector disconnecting switches for connecting to either bus. A similar 2,300-volt duplicate bus is also being arranged for. The

waterworks feeders with their present switches and bus will be left in their present location close to the water pumps. The 575-volt feeders will be moved and will be connected to a single bus. This will also be done for the street-lighting feeders. Two 1,500-kv-a., 13,200-volt star high tension, 4,000-volt star or 2,300 or 575-volt delta low tension, 25-cycle, oil-insulated, water-cooled, 3-phase, transformers were ordered from the Canadian General Electric Company in April, and are expected to be delivered during November. These transformers will be installed temporarily in the present station to give the increased capacity required during the winter months.

Specifications have been issued and tenders received covering the new switching equipment required. Work on the building extension will not be started until the spring of 1918.

### Lucan

The local commission is taking more power than the contract amount of 100 h.p. For the month of October this municipality received and paid for 142 h.p., delivered at 4,000 volts. Both flour and chopping mills installed electric drive, and engineering assistance was given in the installing of electrical apparatus as well as in extensions to serve the additional customers. Advice was given on operating from time to time throughout the year.

### Markham

A request for a supply of Hydro power having been received from the Village of Markham, as well as a number of petitions from Markham Township, an investigation was made as to power requirements in this district and estimates prepared on the cost of delivering this power. As the possibility of supplying power in this district depended on the power requirements of other municipalities, the question of this supply is still undecided.

### Mimico

The business in this municipality increased to such an extent that it was found necessary to make many additions and improvements to the distribution system, and the amount of such construction was increased by the taking over of that portion of the Interurban Electric Company's system lying within the town. Engineering assistance was given both in obtaining new power and lighting customers, and in advising as to the proper construction for the necessary lines.

### Distributing Station

As the feeder to the municipality of New Toronto and to Brown's Copper & Brass Rolling Mills, Limited, which was fed from the three 150-kv-a., 13,200/2,300-volt Crocker-Wheeler Company transformers located in a temporary extension to this station, was changed over to feed out of Etobicoke Temporary Station when that station was placed in service, it was no longer necessary to operate this bank of transformers. The transformers were therefore cut out of service August 23d, and the temporary extension dismantled, the transformers being transferred and shipped to Niagara Falls for use on the Queenston development work.

Because of excessive voltage drop in the 2,300-volt feeders from this station, it was decided to change the secondary voltage from 2,300-volt delta to 4,000-volt star neutral grounded. The necessary additional apparatus was ordered and the change was made by the Commission on September 2d.

As it was found necessary to still operate the Mimico Asylum and Provincial Brick Company feeder at 2,300-volts, it was disconnected from the station bus and connected on the 2,300-volt New Toronto feeder from the Etobicoke temporary station which was brought into this station for metering purposes.

### **Mitchell**

#### **Municipal Station**

The three 75-kv-a., 26,400 or 13,200-volt high tension, 575-volt low tension, 25-cycle, oil-insulated, self-cooled, single-phase Canadian General Electric Company's transformers were installed in a new and separate building. This building is the same as the Commission's standard type "G-1" Station and was built by the Corporation of Mitchell. This station will accommodate two incoming 26,400-volt lines, one set of electrolytic lighting arresters, one set of choke coils, one 26,400-volt hand operated automatic oil switch with its current transformers and the three 75-kv-a. transformers. The low tension circuit from the transformers is taken directly out of the new building and carried over to the existing station and connected to the existing 575-volt bus, where the meter for this station is installed. The 26,400-volt lightning arrester, oil switch and current transformers for this station were taken from a stock order which had been placed by the Commission some months ago with the Canadian General Electric Company. The 26,400-volt insulators, choke coils, disconnecting switches, etc., were supplied by the Canadian General Electric Company. The equipment in this station is now being installed by the Commission, and should be ready for service about the middle of November.

### **Moorefield**

The enabling and money by-laws were submitted and passed, and material for the distribution system has been ordered. A contract for power was signed with the Commission on a basis of 25 h.p. at \$63.93 per h.p. per year. Power will be supplied from Palmerston at 4,000 volts.

### **New Toronto**

Many additional power and lighting customers having been secured, with a consequent increase in the power demand, it was found necessary to make numerous alterations and additions to the distribution system. On request of the municipality the Commission gave the necessary engineering advice, arranged for the purchase of material and supervised the construction which is now completed.

### **Niagara Falls**

#### **Distributing Station**

The equipment described under this heading in the last Report will not be required, owing to arrangements having been made so that the City of Niagara Falls and Stamford Township will be supplied with power direct from the Ontario Power Company's Distributing Station. The material purchased for this work is being used elsewhere.

### **Norwich**

The load on the local system has increased from 171.6 h.p. taken during October 1916, to 231 h.p. taken during October 1917. Assistance was given the local management during the year on the operation of the local system and on extensions.

The local condenser company is considering using a block of 200 h.p. during the coming year to take care of extensions to their plant.

#### Distributing Station

As the load on this station has increased very rapidly, the three 50-kv-a. transformers now in service are inadequate, and arrangements are now being made to install larger transformers.

#### Oil Springs

Under the supervision of the Commission, a new system was designed and constructed and it is expected that power will be turned on early in 1918.

#### Distributing Station

The construction of a standard pole-type distributing station was authorized in April to supply power to Oil Springs. The equipment consists of a Hydro-Electric Power Commission air-brake switch, Delta-Star fuses, choke coils and arrester, one 75-kv-a., 3-phase, 26,400/13,200/4,000/2,300/575-volt, 25-cycle transformer and one 4,000-volt feeder protected with expulsion fuses. The metering equipment consists of a Canadian General Electric graphic recording wattmeter with suitable instrument transformers housed in a corrugated metal meter house.

All construction work is being done by the Commission and the station will be ready for service early in November.

#### Palmerston

##### Waterworks

In last year's report mention was made of the fact that a vertical, electrically driven, centrifugal pump had been ordered, and that this pump had been tested at the maker's works.

This pump is installed in a well about 6 feet in diameter and 35 feet deep, and although a good deal of trouble was experienced in getting the steel caisson into place, owing to the presence of quicksand, it was finally accomplished quite satisfactorily. The whole installation has worked very well ever since it was put into service, in March of this year, and has been the means of saving the town a very considerable annual expenditure on coal as well as the wages of one man.

As a precaution against seepage, in order to keep the caisson dry, a small plunger pump, driven by a 1-h.p. electric motor, has been installed in the caisson; this is only operated occasionally.

The caisson is electrically lighted, and a small brick building has been erected over the top of it.

#### Distributing Station

On August 24th a contract was placed with the Canadian General Electric Company for the supply and installation of one 3-phase, 4,000-volt feeder-panel, including switching equipment and connecting material for one out-going feeder to Drayton. This equipment is due for shipment early in 1918.

#### Paris

The use of electric power in this municipality has greatly increased, and during the last month of the year they purchased 1,125.1 h.p. For the same month a year previous their load was 398 h.p.

An additional 75 h.p. contract has been signed with the Wincey Mills. The power is to be delivered next spring when the textile machinery for the mill is expected to arrive from England.

Engineering advice was also given the municipality regarding the installation of a new 25-cycle, booster fire pump.

When conditions become normal the local commission expects to have removed the communication poles of companies, as well as its own in business section of the main street, and to improve the business district lighting with an ornamental street lighting system.

#### **Municipal Station**

The three 150-kv-a. transformers and other equipment, referred to in last Report, were installed and connected into service on November 24th.

#### **Parkhill**

Estimates were prepared for 50 and 75 h.p. to be delivered to the municipality at 4,000 volts.

The Commission investigated conditions in the municipality and gave advice in regard to the operation of a local Hydro-Electric System. All the available power users were canvassed, and contracts signed for two years for the local system.

The municipality finally decided to contract for 75 h.p. at \$75.23 per h.p. per year. Assistance was given the municipality in the preparation of its money by-law.

A vote will be taken on the money by-law in November.

#### **Petrolia**

During the year a great increase occurred in the number of power consumers, due to the majority of oil pumping rigs changing over to the use of Hydro power. A considerable increase in the production of the wells was noted, due to the steady running of the motors.

#### **Sandwich**

During the year a contract was signed with this Commission for a supply of power for the Canadian Salt Company's Sandwich plant. The amount of power to be supplied under the contract is 2,000 h.p., and engineering assistance was given the company in connection with the purchase of rotary converters and in connection with the erection of a 26,000-volt sub-station. It is expected that the equipment will be put into operation early in the coming year, if power is available. The power is used in connection with the electrolysis of salt brine, the products obtained being used at the present time entirely in connection with the manufacture of high explosives.

#### **Canadian Salt Company Distributing Station**

Drawings and specifications for a sub-station to supply power for two 2,000-kv-a. rotary converters were prepared.

It was decided to install transformer capacity sufficient for one rotary converter at present, with provision for duplicating the equipment as soon as the output of both rotary converters is needed.

A contract was therefore placed with the Moloney Electric Company in March for three 750-kv-a., 26,400/176-volt, 25-cycle, single-phase, water-cooled transformers.

A reinforced concrete building 60 feet by 22 feet in size was erected by the company in accordance with the Commission's plans and specifications.

Switchboard panels were purchased from A. H. Winter Joyner, Limited, and switching, metering and control apparatus from the Canadian General Electric Company and the Canadian Westinghouse Company.

As soon as the equipment is delivered, it will be installed by the Commission and put into service as speedily as possible.

Power will be supplied over two 26,400-volt lines from Essex Transformer Station.

### Sarnia

During the year engineering assistance was given to Sarnia in connection with the completion of work in connection with remodelling the distribution system, and also in the construction of a 26,000-volt sub-station.

The 60-cycle, steam-driven equipment in the station, purchased together with the distribution system from the Sarnia Gas and Electric Light Company, was disposed of at very satisfactory figures, and the Sarnia system has shown a very satisfactory operating result for the year.

### Street Lighting

The new street lighting system noted in the preceding report as being in course of construction, has been completed and placed in service. The residential fixtures are of the latest type with reflectors designed for use with the concentrated-filament of the gas-filled incandescent lamp. The White Way fixtures are of the bracket type, with diffusing globes, and are mounted on steel poles, which carry the single overhead wire of the series-circuit, and which also support the span wires of the street railway system. On these poles are also mounted the individual transformers for the lamps. These transformers are rated at .516-k.w. 6.6-ampere primary and 20-ampere secondary. The poles are spaced at approximately 105 feet with lamps on all poles, on both sides of the street, in the business district.

### Municipal Station

Two of the 750-kv-a., 3-phase transformers were placed in service on November 10th, with one 26,400-volt oil switch loaned from Essex Transformer Station, and some 26,400-volt disconnecting switches from the Canadian General Electric Company, all as referred to in the last Report. The installation of the permanent equipment has been practically completed for the two 26,400-volt incoming lines, three 750-kv-a. transformers, four 28-k.w. constant current street lighting transformers, one 75-kv-a. potential regulator, four 4,000-volt commercial lighting feeders, four 4,000-volt power feeders, etc., all as referred to in the last Report.

In March, the Canadian General Electric Company was not in a position to ship the 410-kv-a. synchronous motor, and arrangements were made for them to express on loan from Peterboro, one 500-k.w. rotary converter which they had available. This rotary converter was connected through six 25-kv-a., 550-volts high tension, 220/110-volts low tension, single-phase transformers to the 575-volt taps on one of the 750-kv-a., 26,400-volt high tension transformers, and rotary was placed in service about April 1st. It was essential to supply this service from 25-cycle power, in order to release one of the steam turbines for use in a munition plant. The 410-kv-a. synchronous motor was placed in service on September 28th.

On September 26th, the contract was placed with the Canadian Westinghouse Company on behalf of the Sarnia Hydro-Electric System for three 185-kv-a.,

2,300-volts high tension, 25-cycle, oil-insulated, self-cooled, single-phase transformers, suitable for operation in a bank with the high tension star connected for 4,000-volt grounded neutral service, and with the low tension double-delta connected to operate satisfactorily with a 500-k.w., 600-volt rotary converter, which is being supplied by the Canadian Westinghouse Company to the Sarnia Street Railway Company, but which will be installed in this station. These transformers are due for shipment in February 1918.

### **Scarborough Township**

During the year the township entered into an agreement with the Commission for a supply of electrical energy. The Commission drew up plans and specifications for an extensive distribution system in the south-western and central portions of the township, including a street lighting system along Kingston road and vicinity. Instructions have been issued for the building of these lines, and it is expected that they will be completed about the middle of the coming year.

### **Seaforth**

#### **Municipal Station**

The three 150-kv-a., 26,400 or 13,200-volt high tension, 2,300 or 575-volt low tension, single-phase transformers, referred to in the last Report, have been delivered by the Canadian General Electric Company, and were installed and connected for 13,200-volts on the high tension. All the 26,400-volt switching equipment and connecting material have been shipped for changing from 13,200-volts on the high tension to 26,400 volts, and the Commission expects to commence installation of same within the next few weeks. The three 150-kv-a., 13,200-volt, single-phase Canadian Crocker-Wheeler Company's transformers were shipped to Baden Distributing Station.

### **Stamford Township**

The system purchased by the township from the Ontario Distributing Company has been operated by the Commission for the township. The necessary engineering assistance was given in remodelling and extending the system, and it is expected that the township will take over the operation of the system early in 1918.

### **Stratford**

The new sub-station which is to be as complete and modern as is possible is nearly completed, and the large transformers were used in a temporary position in order to take care of the increased load during the year. A number of new power customers were connected and considerable revision has been made in the distribution system. Users of direct current were notified that this class of power would not be given after September 1, 1917, and new 25-cycle motors have been purchased to take the place of the direct current equipment.

#### **Municipal Station**

Contract for construction of a building to cover requirements of the Stratford Utilities Commission was awarded, on their instructions, to Mr. Robert Marson, of Stratford, on the basis of drawings and specifications which were sent to the Local Commission in October 1916.

The contract included supply and erection of structural steel which was furnished by the Stratford Bridge Works. The building was constructed adjoining the

original sub-station, and is 54 feet 6 inches long by 30 feet wide by 42 feet 9 inches high from basement floor to top of parapet wall. Masonry, construction of walls and floors, etc., is in accordance with Hydro-Electric Power Commission's general specifications. The building contains two storeys and a basement over entire area.

Construction of building was started in December 1916, and work has been completed.

On June 1, 1916, the contract was placed with the Canadian General Electric Company for three 750-kv-a., 26,400 or 13,200-volts star high tension, 4,000-volts star or 2,300 or 575-volts delta low tension, 25-cycle, oil-insulated, water-cooled, 3-phase transformers. One transformer was placed in service in a temporary building beside the old station on November 16th. The second and third transformers were shipped on February 2d, and one was placed in service, both being in the temporary building. On February 22d the contract was placed with the Canadian General Electric Company, on behalf of Stratford Utilities Commission, for the necessary switching equipment and for a 100-kv-a. potential regulator, all as referred to in the last Report. The high tension switching equipment has been received and installation of same has been commenced by the Commission. The 2,300-volt switching equipment will be shipped during November, and it is expected that this station will be ready for service early in 1918.

### Strathroy

During the year the Utilities Commission placed an order for an electrically-driven fire pump, so that with the gasoline engine unit for fighting fire this municipality should be in good condition in that respect.

A large number of consumers have been added, and the local distribution system is in excellent condition and is steadily improving. The auditor's report shows a good surplus for the year.

### St. Jacobs

During the year the Police Village of St. Jacob's was connected to the Niagara System. Power is being supplied to the flour mill in addition to the lighting load.

### Distributing Station

The construction of a standard pole type distributing station was authorized in February to supply power to St. Jacob's. The equipment consists of a Hydro-Electric Power Commission air-break switch, Delta-Star fuses and choke-coils, one 75-kv-a., 3-phase, 25-cycle, 26,400/13,200/4,000/2,300/575-volt, Maloney transformer and one 575-volt feeder protected with fuses. The metering equipment consists of a Canadian General Electric graphic watt-meter and instrument transformers housed in a corrugated metal meter-house. The installation work was done by the Commission and the station was placed in service on August 28th.

### St. Marys

The local system suffered considerably from the loss, by fire, of one of the largest power customers during the year. This was offset somewhat by new customers and the operating report is very favorable. A small electrically-driven domestic pump and a gasoline-driven fire pump have been ordered for the water-works station.

### Distributing Station

The installation work for the second bank of transformers, referred to in last year's Report, is almost completed, but owing to the transformers having been badly damaged by the Railway Company while being shipped from Stratford to St. Mary's, new tanks must be obtained before they can be put in service.

### St. Thomas

The financial report for the St. Thomas Hydro-Electric System for the year shows the usual good results. At the present the city has approximately 3,070 customers made up of 2,488 domestic lighting, 470 commercial lighting customers, and 112 power consumers, taking a demand for October of 2,037.5 h.p.

In order to improve the lighting service the local management requested data on an automatic voltage-regulator, which was prepared by the Commission, and it is expected that the city will order this equipment at an early date.

### Street Lighting

A plan was prepared for the local commission to take out of service the twenty Magnetite arc lamps, which are still in use. It is the intention to add forty-four gas-filled, incandescent lamps to the present system, and an additional constant-current transformer of 30-k.w. capacity, to provide for present and future extensions.

Underground distribution feeders out of the new municipal sub-station were supplied and installed by the Commission in the conduit system constructed as previously reported.

### Municipal Station

The building which was referred to in the last annual Report was completed on November 23, 1916.

The installation of the electrical equipment by the Commission was completed sufficiently to place the station in service in April with one 13,200-volt incoming feeder connected. The second 13,200-volt feeder was connected on May 5th, and the installation completed on May 19th. The entire installation and change of equipment from the old station to the new station was made without any serious interruptions to service.

A third 750-kv-a., 13,200/2,300-volt, 3-phase, Canadian General Electric Company transformer was purchased and placed in the station in August to be used as a spare unit.

At the request of the local commission, drawings were prepared in February to cover the design of an exterior entrance to the basement of the new building to admit their motor truck. The work on this entrance was arranged for by the local commission.

### Tavistock

This municipality signed a contract for only 50 h.p. and it is gratifying to see, after approximately one year's operation, the load increased to 229 h.p.

Engineering assistance was rendered to the Tavistock Milling Company on the purchase of its motors and a panel for switching and metering equipment. The extensions to the local distribution system were made on advice from the Commission.

### Waterworks

As in the case of Palmerston the preliminary work done in connection with pumping in this town is referred to in the 1916 report. Since then the equipment described, consisting of a 4 by 4 inch, 60 Imperial g.p.m. Luitwieler pump, driven by a 3 h.p. electric motor, and automatically operated, has been erected. The unit has been in operation since installation.

### Distributing Station

This station was placed in service at 13,200-volts temporarily on October 26, 1916, as described in the last Report, but the permanent installation was not completed until November 21st. The three 75-kv-a., 26,400 or 13,200-volt high tension, 2,300 or 575-volt low tension, 25-cycle, oil-insulated, self-cooled, single-phase, Canadian Crocker-Wheeler Company transformers, were shipped from St. Catharines on March 22d, and was placed in this station about April 1st. These three 75-kv-a. transformers were placed in service on August 4th, connected for 13,200 volts on the high tension and 575 volts on the low tension, at which voltages this station is now operating. The three 25-kv-a. Moloney transformers used temporarily in this station were released and returned to stock.

### Tillsonburg

Contracts were obtained for the local system amounting to 370 additional h.p. from the Canadian Cereal Company. Engineering assistance was given the municipality regarding extensions to the local system to care for this additional load as well as other matter pertaining to the operation of the local plant.

The auditor's report for the year shows a substantial surplus.

### Toronto Township

The Interurban Electric Company's system having been absorbed by the Commission, it was found necessary to provide for the continuance of a supply of electrical energy to former customers of that company in the Hamlet of Erindale. An investigation was made of the situation by the Commission and plans made for serving this district by an extension to the Toronto Township system. The Erindale lines were rebuilt and new lines constructed so as to make these a portion of the township system. Plans and estimates have also been made providing for various other extensions, a portion of which have already been built.

### Vaughan Township

Various petitions were received from residents of the township and the Hamlet of Maple. Acting on these petitions the Commission investigated the situation and found that sufficient business could be secured to warrant the building of a distribution system. Plans were consequently prepared and instructions issued covering such a system. Power is to be supplied from the Woodbridge transformer station.

### Wallaceburg

During the year arrangements were made to increase the sub-station capacity in Wallaceburg, to take care of additional customers including the Chatham, Wallaceburg and Lake Erie Railway Company, and an additional load at the Dominion Glass Company's plant.

### Distributing Station

Owing to the increasing load at this station, it was decided to increase the transformer capacity of this station by installing a second bank of three 150-kv-a., 26,400/2,300-volt, single-phase transformers.

As there was not sufficient room in the present station for the additional equipment, it was decided to purchase from the local commission the section bank of transformers in this room, strengthening the floor, and making other necessary changes in the building.

Plans are being prepared showing the changes required in the electrical layout, and in the building, and quotations were requested on the additional electrical equipment. Three 150-kv-a., 26,400/2,300-volt, single-phase transformers ordered previously for stock from Packard Electric Company were transferred to this work and will shortly be ready for shipment.

The present 26,400-volt oil switch will control both transformer banks, but each bank will be connected through a set of disconnecting switches. On the low tension side, each transformer bank will have its own oil switch connecting it to the 4,000-volt bus, the secondaries of the current transformers on these lines being connected in parallel to the recording wattmeter to reach the total load. Provision is also being made for the installation of an additional 450-kv-a., 4,000-volt feeder equipment for the municipality.

### Waterloo

The operating report is satisfactory and shows a very staple condition of the local system. An extension to serve a number of farmers was built north of the city. New electrically-driven pumps have been installed in the waterworks, and water is being supplied to the City of Kitchener.

### Watford

The old plant was purchased by the municipality and a distribution system was installed under supervision of the Commission. The station equipment consists of one 50-kv-a. 26,400/4,000 outdoor transformers in the standard pole type station. Power was turned on August 11, 1917. The number of lighting consumers was increased 50 per cent. and two power consumers are also being supplied.

### Distributing Station

The construction of a standard pole-type distributing station was authorized in November to supply power to Watford. The equipment consists of a Hydro-Electric Power Commission air-brake switch, Delta-Star fuses, choke coils and arrester, one 50-kv-a., 3-phase, 26,400/13,200/4,000/2,300/575-volt, 25-cycle Moloney Electric Company transformer, and one 4,000-volt feeder protected with expulsion fuses. The metering equipment consists of a Canadian General Electric graphic recording wattmeter with suitable instrument transformers housed in a corrugated metal meter house.

All construction work was done by the Commission and the station was placed in service August 11, 1917.

### Welland

Engineering assistance was supplied to Welland in connection with the construction of a new sub-station. The station will be supplied with power at 46,400-volt power.

### Distributing Station

At the request of the Welland Hydro-Electric Power Commission, drawings and specifications were prepared covering a new sub-station building, and at a meeting of the Welland Commission on January 16, 1917, the contract was awarded to Mr. J. C. Diffin, of Welland. This building will accommodate four 1,500-kv-a., 3-phase transformers, together with their switching equipment, and for two incoming and two outgoing 45,700-volt, 3-phase lines, and the switching equipment for five 2,300-volt lighting feeders and eight 2,300-volt power feeders. The building is now practically completed. It is 55 by 35 feet by 36 feet high, inside dimensions, with a 10-foot basement under the whole building. The building is constructed of pressed brick with reinforced concrete floors. The roof is supported by steel beams and columns, and with a concrete foundation.

Drawing and specifications were made up and tenders obtained on switching equipment to control one incoming and one outgoing 45,700-volt line, two 1,500-kv-a., 45,700-volt, high tension star, 2,300-volt low tension delta, 3-phase oil-insulated water-cooled transformers, three 2,300-volt lighting feeders, one 100-kv-a., a potential regulator, four 2,300-volt power feeders, and one bank of station service transformers with 110/220-volt station service feeders. The contract for this switching equipment, including the installation of it, was awarded to the Canadian Westinghouse Company on May 17, 1917.

Tenders on two 1,500-kv-a., 45,700-volt star or 26,400-volts high tension, 4,000-volt star or 2,300 or 575-volt delta low tension, 25-cycle, oil-insulated, water-cooled, 3-phase transformers, were obtained and reported on, and the order was placed with the Canadian Crocker-Wheeler Company by the Welland Hydro-Electric Power Commission. On September 16th one of these transformers was put into service temporarily with the necessary switching equipment, of which the 45,700-volt choke-coils and disconnecting switches were borrowed from spare equipment at Niagara Station. Arrangements are such that the load on this station is metered on the 45,700-volt incoming line. The permanent switching equipment will be shipped in December and January next.

### Wellesley

An additional power load of 37½ h.p. was obtained during the year, bringing the total load taken by the village over 100 h.p. The operation has been very satisfactory.

### West Lorne

#### Distributing Station

The type "E-2" station referred to in last Report was completed, and, with the exception of Rodney feeder panel, was placed in service on December 22, 1916. The Rodney feeder was placed in service with temporary connections on January 15th, and the permanent work on same was completed and the new panel put into service on February 2, 1917. The installation of recording meters on the feeder panels was completed on February 22d. All installation work was done by the Canadian Westinghouse Company.

### Weston

#### Municipal Station

The installation of the transformer equipment in the Canada Cycle and Motor Works at Weston, which was mentioned in the last Report, was completed and put in service on January 1st by the Commission.

In addition to this work, the Commission received a request from the Corporation to obtain larger transformers for the municipal station to replace the original 50-kv-a. transformers. It was arranged to transfer three 100-kv-a. Canadian Westinghouse Company 26,400/13,200/2,300/575-volt, 25-cycle, single-phase transformers from Niagara Falls Transformer Station, which had been used there for a short time to supply power to the City of Niagara Falls.

### Windsor

A number of additions were made to the ornamental street lighting system during the year, and the Water Commission is now considering the installation of electrical-operated pumps at the municipal pumping plant.

### Woodbridge

#### Distributing Station (Vaughan Township Feeder)

Plans are being prepared for a 4,000-volt feeder to supply power to Vaughan Township. The feeder will be tapped off the present Woodbridge feeder through expulsion fuses and metered by a type "R.O." Westinghouse demand meter. The equipment will be installed by the Commission.

### Zurich

Engineering advice was given this municipality regarding the operation of a local Hydro-Electric System. The town has contracted for 50 h.p. to be delivered at a cost of \$69.34 per h.p. per annum.

The Commission looked after the layout of a distribution system to best meet the local requirements, and supervised the installation of this. A foreman and linemen were procured for the municipality and all labor was paid locally.

The Commission also obtained for the town a contract with the local flour and chopping company for 50 h.p.

Advice has been given from time to time in connection with the operation since power was turned on which was in August 1917.

## SEVERN SYSTEM

### GENERAL

The year closing October 31, 1917, has proved to be most successful in every respect as far as the Severn System is concerned since plant was taken over by the Commission.

The demands for power in the various municipalities necessitated purchase of a large block of power from the Eugenia System which was supplied over the tie-line between the Eugenia development of the Collingwood sub-station. The transmission line from Port McNicoll to Penetang was double-circuited and the size of the conductor increased from Midland sub-station to Penetang, from No. 2 B. & S. aluminum to No. 2 B. & S. copper. Plans were prepared covering an extension to the generating station at the Big Chute which included the installation of an additional 2,000-k.w. generator. Investigations were also made covering the construction of an additional transmission line from the Big Chute Plant to Waubesa and also the construction of an inter-switching station at the latter point. Plans were prepared covering the installation of additional switching equipment at all of the large sub-stations connected to the system, in order to provide for taking care of additional loads.

## POWER CONSTRUCTION

### Big Chute Generating Station

In view of the rapid increase in the power demands of the Severn System, it became necessary, early in 1917, to proceed with the extension of the Big Chute Generating Station; this plant is located on the Severn River, about four miles below the station of Severn Falls on the Canadian Pacific Railway. The present installation consists of three hydro-electric units, each of about 1,100 brake h.p.

To secure the necessary additional capacity, a new penstock and a fourth turbine were required, together with two new valves, head gates and the necessary power house sub-structure and superstructure.

In May 1917, contracts were let for these. The Dominion Bridge Company, of Montreal, secured the contract for the steel penstock which is 9 feet in diameter, and about 170 feet long. The installation is to be completed in December 1917. The Wellman-Seaver-Morgan Company's tender for a double-runner spiral case turbine, of 2,300 brake h.p., under a 56-foot head, running at 300 r.p.m., was accepted. Deliveries to be in February 1918. The contract for two 66-inch diameter gate-valves, together with two head-gate mechanisms, was awarded to the Boving Hydraulic and Engineering Company, of Lindsay. Considerable trouble was experienced in securing the necessary sand and gravel on account of the location of the plant, and the poor transportation facilities. Satisfactory progress, however, has been made, the power house sub-structure being completed and ready for the assembly of the penstock and turbine, while some of the concrete has been poured in the superstructure. The valves on the cross-over between No. 1 and No. 2 penstocks have been set and the penstock material is all on the ground.

The contract for the necessary excavation and concrete work was placed in September with Messrs. Wells & Gray, of Toronto. This extension will be approximately 38 by 69 by 30 feet high over the generator room and 40 feet high over the transformer and high tension rooms. The building will be reinforced concrete, and is expected that it will be completed early in 1918.

Tenders were obtained on the 1,600-kv-a., 300 r.p.m., 2,200-volt, 3-phase, 60-cycle, waterwheel type generator, and in June the contract was awarded to the Canadian General Electric Company.

When making the extension to the station, it was decided to remodel the high tension switching room by installing duplicate 22,000-volt busses, making all 22,000-volt oil switches electrically operated. It was also decided to install equipment for one new 22,000-volt outgoing line and to remodel the 22,000-volt arresters, and to provide space for equipment for two future lines, one to Orillia and one to Waubaushene.

The present switchboard will be rearranged in order to provide space for the panels to control the new and future 22,000-volt lines. New 2,200-volt electrically-operated oil switches will be installed for the low tension sides of the transformers, and the present transformer switches will be used for the new generator and for the station service transformers.

Tenders have been obtained on the new switching equipment required and the order for same will be placed during the next month. The new unit should be in operation in the early part of 1918.

## MUNICIPAL WORK

### General

Enabling by-laws were submitted to and approved by the electorates of the following municipalities for the purpose of authorizing the execution of new agreements with the Commission covering the delivery of power:—

Penetang, Coldwater, Midland, Elmvale, Barrie, Stayner, Creemore, Collingwood.

These new contracts permit the municipalities to participate in the joint ownership of the Big Chute development, purchased by the Commission after the completion of the original contracts, and also to share in any other development and works required from time to time in the future, as may be needed to supply increased demands for power. Estimates of power costs and rates under the new agreements were prepared by the Commission and submitted.

Assistance was also given by the Commission to each municipality in placing the question before the electors and at public meetings. New agreements were prepared and duly executed by the officials of the municipalities and the Commission.

An investigation of rates was made by the Commission for all municipalities in the Severn System, covering both power supplied by the Commission to the municipalities and also power supplied by the municipalities to their respective customers.

Reductions were duly authorized by the Commission in the following municipalities: Collingwood, Barrie, Stayner, Midland, Penetang, Victoria Harbour, Port McNicoll and Waubausheene.

Estimates covering the cost of power were prepared and submitted, valuations of existing plants were made, the cost of distribution systems determined and assistance was given by the Commission in laying this information before the rate-payers, prior to voting on money and enabling by-laws. This was done in the following municipalities: Alliston, Beeton, Tottenham, Bradford, Cookstown, and Thornton.

Enabling and money by-laws were submitted and carried in all of these places, and agreements were completed with the Commission for the delivery of power. Assistance of a similar nature was also given to the Police Village of Hillsdale and Floss Township (for the Hamlet of Phelpston), but the submission of by-laws was deferred in these places until a later date.

Engineering advice and assistance was given to the following municipalities in the nature of soliciting power loads and new customers, also in various matters pertaining to the operation and management of their systems, and periodical trips were made by engineers of the department to each town and village for the purpose mentioned:—

Penetang, Midland, Victoria Harbor, Port McNicoll, Waubausheene, Coldwater, Elmvale, Barrie, Stayner, Creemore, Collingwood.

Estimates and reports were prepared and submitted covering rates and cost of service to the following townships or portions of same:—

Innisfail, Essa, Tecumseh, West Gwillenbury, Tossorontio.

### Alliston

#### Waterworks

Towards the end of the summer a request was received from the town asking that an engineer be sent to look into the question of the provision of electric pumps.

As a result, it is intended to install:

(1) A.6-in.3 stage, 550 Imp. g.p.m., centrifugal fire pump, capable of working against a head of 130 lbs. per sq. in., direct-connected to a 75 h.p., 3-phase, 60-cycle, 550-volt, 1,200 r.p.m. induction motor.

(2) A.3-in.-2 stage, 150 Imp. g.p.m., centrifugal domestic pump, capable of working against a head of 65 lbs. per sq. in. pressure, and also capable of delivering 250 Imp. g.p.m. against 50 lbs. per sq. in. pressure, direct-connected to a 15 h.p., 3-phase, 60-cycle, 550-volt, 1,700 r.p.m. induction motor with automatic control.

Early in January next a by-law relating to the foregoing is to be voted on by the people.

### Distributing Station

A standard type "H" station was authorized for Alliston, and the building contract was awarded to Wells & Gray, Toronto, who completed the building in October.

The station will be fed by one 22,000-volt line through air-break switches and will be equipped with Delta-Star outdoor arresters. The station equipment will consist of three 40-kv-a., 22,000/2,200-volt, single-phase, 60-cycle, Canadian Westinghouse Company transformers, with one 4,000-volt, 250-kv-a., outgoing feeder.

The Canadian Westinghouse Company were awarded the contract to supply and install the switching equipment in this station except the low tension arresters and the switchboard meters. Weston indicating meters were purchased from A. H. Winter Joyner, Limited, and the recording wattmeter was purchased from the Niagara Electric Improvement Corporation. Garton-Daniels low tension arresters are being supplied by the Commission. Two of the transformers will be transferred from Hanover, where they were formerly in service, and a third transformer will be purchased to complete the bank. The installation will be completed early next year.

### Street Lighting

There will be installed in the Alliston Distributing Station for the Municipality one 16-kv-a., 4-ampere, 60-cycle, Canadian General Electric Company constant current transformer to supply street lighting. This transformer was purchased from the Municipality of Orangeville, and installation will be done by the Commission.

## Camp Borden

### Municipal Station

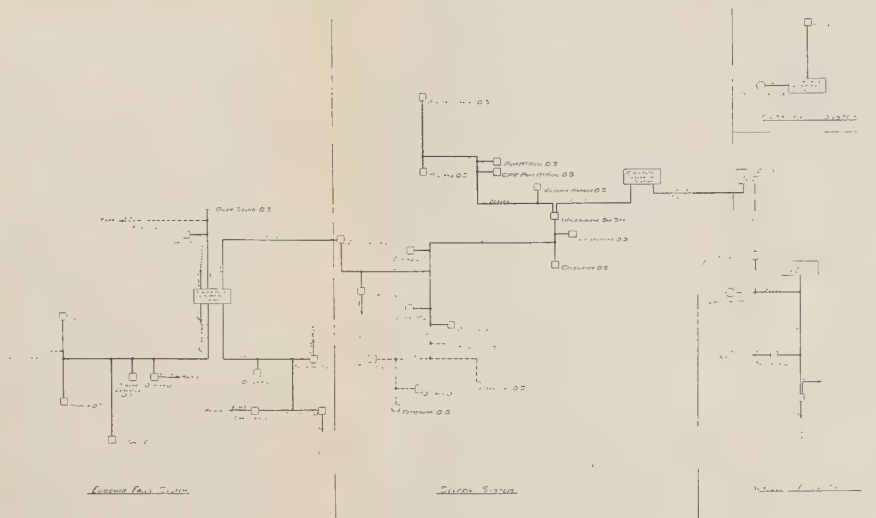

The purchase and installation of an additional 4,000-volt feeder panel and connecting material for the Camp Borden municipal station was authorized by the Department of Militia and Defence in March 1917, to supply the Aviation Camp.

A rush order was placed with the Canadian Westinghouse Company on March 12, 1917, and the panel was shipped on May 2d and immediately installed by the Commission, and connections were made. The wattmeters of the "R.O." type, were not shipped with the panel and a temporary Esterline wattmeter was installed by the Commission. The "R.O." meters, when received, were promptly installed and all details of the work were completed on July 27th.

Cables were supplied and installed by the Commission in an underground conduit system constructed for the use of the Aviation Department at Camp Borden.

Special street lighting equipment was designed and installed by the Commission for the illumination of the roadways at this camp during the year.

### KEY

□ Generating Unit

○ Substation

○ Hydro-Electric Generator

— Transmission Line

..... Generating Unit under Construction by 1931

--- Generating Unit under Construction by 1931

### Collingwood

During the year an extension was made to the distribution system for the purpose of supplying power to a large steel plant and electric smelter. All of the construction work and engineering was performed by the Commission.

The increase in power supplied in this municipality also necessitated the installation of special and additional apparatus in the sub-station for supplying a portion of the load from the Eugenia System, which ties into the Severn System at the Collingwood station.

The total increase in power supplied to consumers in Collingwood during the year 1917 exceeded by 1,000 h.p. the previous year's demand.

#### Distributing Station

Plans were prepared for the construction of a 24 by 27 by 25 ft. high extension on the end of the present building to accommodate a 22,000-volt tie-line to the Eugenia System, and to provide for a second bank of transformers in future. The extension, which was built on contract by Mr. H. G. Wynes, of Collingwood, was made similar to the present building except that it was four feet higher, to obtain more head-room for the electrical apparatus.

The arrangement of the electrical equipment was changed to have two 22,000-volt lines from the Severn System and one from the Eugenia System enter the station and to connect to a double bus through oil switches and selector disconnecting switches, each line having its own lightning arrester. Potential transformers were also placed on each line, and a synchroscope provided so that lines could be synchronized. The present transformer bank was also provided with an oil switch and selective disconnecting switches, and space was left for a similar arrangement for a future transformer bank.

A contract for the necessary electrical equipment was let to the Canadian General Electric Company, but the graphic wattmeters were obtained from the Canadian Westinghouse Company, and the Weston indicating meters from A. H. Winter Joyner.

Two additional 2,300-volt feeder panels and equipment were ordered, one to supply the William Kennedy Company, Limited, and one to supply the Collingwood waterworks. These are being installed for the municipality in the Collingwood distributing station by the Commission.

To improve the power factor of this station, the Collingwood Water and Light Commission purchased from the Kingston Civic Utilities a 312-kv-a. Westinghouse synchronous generator, to be used as a synchronous condenser, with the switchboard panel to control it. The Collingwood Commission also purchased from the Power Plant Equipment Company, of Toronto, for use with this machine, a 15-k.w. Holtzer-Cabot, 110-volt exciter, direct connected to a 20 h.p. Westinghouse induction motor. This motor is belted to the 312-kv-a. generator, and is used to bring the generator up to synchronous speed. The generator then is used as a synchronous motor, driving the exciter. This set was first placed in service on October 31, 1917.

All the installation work is being done by the Commission and it is almost completed.

### Midland

Due to increased demands for power by new and existing customers, a complete rearrangement was made in the distribution system power feeders in the municipality. All engineering and construction work in connection with these changes and extensions was performed by the Commission.

### Old Distributing Station

Owing to the steadily increasing load on this station, it was found necessary to increase the transformer capacity, and three 300-kv-a. 22,000/2,300-volt, single-phase, 60-cycle, Moloney transformers were purchased and installed in March, replacing three, 150-kv-a., 22,000/2,300-volt, single-phase Moloney transformers, which were then transferred to Orangeville distributing station.

### New Distributing Station

It was later decided to construct an entirely new sub-station building in a more suitable location close to the waterworks station and arrangements were made to that end with the Midland Water and Light Commission. At the local Commission's request plans and specifications were prepared for a new sub-station of a modified standard, "G.L." type. Specifications call for a brick building 34 by 26 by 17 feet, 10 inches high. These plans were transmitted to the Midland Commission which had the building erected and completed in June.

The new station is fed by two 22,000-volt incoming lines through oil switches to the high tension busses which feed the three 300-kv-a., 22,000/2,300-volt, single-phase power transformers. Both lines are protected by electrolytic lightning arresters, and the oil switches have reverse power and definite time overload relays for automatic tripping. The transformer low tension delta bus is connected through an oil switch to the 2,300-volt bus at the switchboard, and from this bus four feeders are taken out of the station through automatic oil switches, one of these being taken through a conduit underground to operate the waterworks pumps in the pumping station near by. Another feeder is taken off the busses, through expulsion fuses, and carried across the end wall to a panel controlling a 35-k.w., type "R.N.", Canadian General Electric constant-current transformer, from which a series street lighting feeder is taken out of the building. All the oil switches are hand operated, and are of remote control type, except those on the waterworks and street lighting feeders, which are mounted directly on the panels.

The Canadian General Electric, 35-k.w., constant-current transformer, with its panel, was removed from the pumping station to the new station. The three 300-kv-a., 22,000/2,300-volt, single-phase Moloney power transformers; two 22,000-volt disconnecting switches were obtained from the old Midland distributing station, together with four switchboard panels and their equipment, and busses back of the switchboard and other available apparatus, as much material as possible being used from this old station.

One new 22,000-volt electrolytic arrester was purchased from the Canadian General Electric Company, and the waterworks feeder panels and equipment was purchased from the Canadian Westinghouse Company. Insulators and other apparatus necessary to complete the installation were purchased from various other companies.

The equipment is being installed by the Commission and the transformers were removed to the new station and placed in service on August 27th, but the installation has not been entirely completed due to the non-delivery of some of the apparatus.

### Orillia

Due to the heavy demands for power in the municipality, arrangements were completed with the Commission for supplying large blocks of power to various industries engaged in the manufacture of war munitions.

An additional contract was executed between the municipality and the Commission, covering a permanent supply of power from the new Swift Rapids' plant under construction by the town. This contract covered the paralleling of the Swift Rapids' generating station with the generating stations located at the Big Chute, Wasdell's Falls and Eugenia, the joint use of transmission lines and the supplying of emergency power by both parties.

### Port McNicoll

#### Distributing Station

Owing to increase in load on the transformers in this station, authorization to purchase larger transformers was given, and three 500-kv-a. 22,000-volts (primary), 575-volt (secondary), single-phase, 60-cycle, water-cooled transformers, having a 333-kv-a., self-cooled rating, were purchased from the Canadian General Electric Company on February 13th to replace the existing three 250-kv-a., self-cooled transformers. In order to improve the operating conditions at this station for the increased load it was decided to rearrange the switching equipment so that there would be an oil switch and a lightning arrester on each of the two incoming 22,000-volt lines. It was also decided to locate the 500-kv-a. transformers and 22,000-volt oil switches on the main floor instead of in the basement, where the 250-kv-a. transformers are located. In order to accommodate this arrangement the Canadian Pacific Railway Company is preparing to make the necessary changes in the building.

The necessary additional switching equipment for the above has been purchased from the Canadian General Electric Company. It is expected that the 500-kv-a. transformers will be installed in November. Arrangements are being made to install the permanent equipment during January and February, when the load on the elevator is very light. The three 250-kv-a. transformers will be transferred to Durham Cement Company's distributing station.

## EUGENIA SYSTEM

### GENERAL

The second year of operation of the Eugenia System has been a most successful one. The tie line between the Power House at Eugenia and the Severn System lines at Collingwood constructed during the latter part of 1916 has been in operation throughout the entire year and has enabled the Commission to market all of the surplus power available at the Eugenia development in the municipalities located in the Severn district and has made possible the maintenance of an ideal load factor at the Eugenia Falls generating station.

The loads in the municipalities connected to the System have manifested a steady increase and several new customers have been secured throughout the district. The total increase in the demand for power has been such that it has been found necessary to double the capacity of the plant and install an additional 4,000 h.p. unit. Construction work on this extension is progressing favorably, and it is expected that the new unit will be in operation early in 1918. During the year four additional municipalities were connected to the system and provision made for supplying four others to be added early in 1918.

By-laws were submitted and carried in two municipalities.

At the close of the fiscal year—October 31, 1917—fifteen municipalities were being served by the Eugenia System.

Distribution systems inclusive of street lighting were designed, constructed and completed in the following municipalities during the year, under the supervision of the Commission, and Hydro service was given for the first time to such systems from the Commission's transmission lines:—

Arthur, Tara.

Estimates and reports were prepared and submitted covering rates and cost of Hydro service to the following Townships or portions of same:—

Brant, Bentinck, Derby, Collingwood, East Luther, Amaranth, Caledon, Artemesia.

Engineering assistance and advice were given to the following municipalities in the matter of rate application, soliciting of power loads and new consumers and other matters pertaining to the operation and management of their respective systems:—

Owen Sound, Chatsworth, Markdale, Flesherton, Dundalk, Shelburne, Orangeville, Grand Valley, Arthur, Mount Forest, Holstein, Durham, Chesley.

An investigation was made by the Commission covering the delivery of power to the following municipalities. Estimates were prepared, possible power demands and transmission line routes determined upon and reports submitted covering these conditions:—

Walkerton, Mildmay, Formosa, Clifford, Teeswater, Wingham, Lucknow, Ripley, Gorrie, Fordwich, Wroxeter, Brussels, Blyth, Kincardine, Paisley, Southampton, Port Elgin, Wiarton.

Valuations were made during the year by the Commission of the following privately owned power developments, including transmission lines and distribution systems with the idea of utilizing the same in connection with the Eugenia development for supplying power to the district adjacent to each:—

Hanover Electric Light and Power Company, Hanover.

Sauble Falls Power Company, Wiarton.

Cataract Power Company, Orangeville.

Walkerton Electric Light & Power Company, Walkerton.

Saugeen Electric Light and Power Company, Southampton.

Valuations were made, distribution systems designed and estimates prepared for the following municipalities for the purpose of determining the cost of Hydro service:—

Warton, Wingham, Walkerton.

## POWER CONSTRUCTION

### Eugenia Falls Generating Station

This plant is located on the Beaver River, near the village of Eugenia, and was completed and placed in operation on November 18, 1915.

Early in 1917, the load demand on the system was increased to such an extent that it was decided to increase the initial capacity of the plant, which now consists of two units, each 2,250-brake horse-power, direct-connected to 1,400-kv-a. generators.

On June 7, 1917, a contract for a single runner turbine delivering 4,000 h.p. at 720 r.p.m. under a 550-foot head, was let to the Allis-Chalmers Company, of Milwaukee.

The original designed maximum installed capacity of this plant was fixed at four 2,250 h.p. units, but the plan, as it will be completed, will contain two 2,250 h.p. units and two 4,000 h.p. units.

The Eugenia system now feeds the Severn system during peak-load hours, and will later be tied-in with the projected plant on the Saugeen River near Port Elgin. The high head and large reservoir capacity of the Eugenia Station make it unusually efficient as a peak-load plant. The market conditions at the time of letting the contract practically prohibited the obtaining of a unit of the same capacity as the previous ones installed, while the Allis-Chalmers Company had already developed and had patterns available for the larger unit. These reasons primarily influenced the decision to install the 4,000 h.p. unit, the construction of which is now well advanced in the shops. Delivery of this unit is expected in the early part of 1918.

A contract for the steel distributor and connection to No. 1 penstock was let to the Canadian Des Moines Bridge & Iron Company, of Chatham, for delivery in January 1918.

The new unit will run on water delivered by No. 1 penstock, which now supplies the two original units. Space has been provided in the generating station for the fourth unit. When this is installed, it will be necessary to install the second penstock and surge tank.

It is expected that the new unit will be in operation by April 1918.

#### Electrical Equipment

Both a high tension and low tension double bus system are to be installed throughout, and also a second bank of power transformers, a Tirrill voltage regulator, a larger storage battery, three additional outgoing 22,000-volt lines and switching, metering and control apparatus for this equipment.

Owing to war conditions it was impossible to obtain from Europe turbines similar to those originally installed to drive 1,410-kv-a. generators, but a turbine of double this capacity could be readily obtained in this country. Therefore, in June a contract was made with the Canadian Westinghouse Company for a horizontal direct-connected water wheel type generator of 2,820-kv-a., maximum rating, at 85 per cent. power factor, three-phase, 60-cycle, 4,000-volt, 720 r.p.m., with a 40 k.w., 125-volt, direct-connected exciter. Delivery is promised by February 1918, and the installation is to be made by the manufacturer.

A contract was placed with the Canadian Westinghouse Company for three 900-kv-a., 22,000/4,000-volt, single-phase, water-cooled transformers, identical with those of the original equipment. Installation to be made by the manufacturer.

A contract was also placed with the Canadian Westinghouse Company for the high tension and low tension switching and double bus equipment, switchboard panels, graphic meters, and a Tirrill voltage regulator. Installation is to be made by the manufacturer. The order for Weston indicating meters for the new switchboard panels was placed with A. H. Winter Joyner, Limited. The old bus system is to be changed over to a double bus system to correspond with the new installation.

Each generator, transformer bank or feeder, is to connect to its respective section of low tension or high tension double bus through its oil switch and a group of selector disconnecting switches.

Feeder oil switches are to be controlled by definite time overload relays and transformer oil switches by a system of differential relays. The generator oil

switches are non-automatic, but plans for a relay scheme to make them automatic are under consideration.

A control room is to be provided in the extension of the building and the existing switchboard panels are to be removed from their present location, and together with the new panels, installed in this control room.

An order has been placed for a 100-ampere-hour type "G-4" 100-cell Edison storage battery to replace the present 80-ampere-hour, 60-cell lead-battery for control operations.

Provision is being made for the future installation of a fourth generator, a third bank of transformers, two 22,000-volt lines, one 4,000-volt feeder, and a motor-driven exciter.

A total of eight 22,000-volt lines is, therefore, possible from this station.

### Building Extension

To provide space for this new equipment and the changes contemplated, it was found necessary to extend the present building from approximately 39 ft. to 112 ft. in length and from 60 ft. to 69 ft. in width. The building will have concrete foundations, brick walls, and reinforced concrete floors and roof supported on steel work.

The change in width was necessary to accommodate the high tension double bus structure.

The contract for the steel was placed with the McGregor-McIntyre Company and for the pressed brick with the Inter-Provincial Brick Company.

The erection of the building is being carried out by the Commission.

The work is being pushed rapidly forward, and it is expected that the new equipment will be completely installed and ready for service early in the coming spring.

## MUNICIPAL WORK

### Chesley

#### Waterworks

About September 1916, the matter of pumping was first taken up here, and on October 3, 1916, instructions were received from the Town Council to investigate it. A report was made in November 1916, and on February 12th of this year two propositions were laid before the authorities, one embracing an estimate for a deep-well pump, capable of delivering 106 Imperial g.p.m. against a total head of 230 feet inclusive of 60 feet lift, driven by a 10 h.p., 3-phase, 220-volt, 60-cycle, slip ring motor with both hand and automatic starting equipment. The other being an estimate for a 150 Imperial g.p.m. rotary pump with a 20 h.p. motor, together with an air compressor driven by an electric motor.

On March 1st of this year instructions to order a pump in accordance with the first estimate were received and the order was placed the same day. The equipment was shipped at the end of April and was put into operation shortly after. The estimated saving, based on three months' operation, is \$430 per annum, after allowing \$251 annually to cover the increased capital charges.

### Derby Township

#### Rural Power

A petition was received and estimates prepared and submitted in connection with a proposed extension from the Tara Station to serve thirteen farms in this district.

### **Kilsyth Distributing Station**

In the last Report it was mentioned that the construction of a pole type distributing station was authorized at Kilsyth, and that a suitable design which could be standardized was being developed. This design has been completed during the past year, and a station constructed from this design. The equipment consists of a Hydro-Electric Power Commission air-brake switch to connect the station to 22,000-volt line, a 75-kv-a., 22,000/4,000/2,300/575-volt, 3-phase, 60-cycle, Moloney Electric transformer protected by Delta-Star 22,000-volt combined fuse and choke coil mounting and a delta-star arrester. The low tension equipment consists of two 4,000-volt feeders to Kilsyth and Tara, protected by 4,000-volt fuses and Garton-Daniel arresters. The metering equipment consists of Canadian Westinghouse Company "R.O." maximum demand meters with suitable instrument transformers housed in a corrugated metal building. It is expected that this station will be placed in service in December.

The construction of this station was done by the Commission. The switching equipment was ready for service the end of September, but owing to the transformer having been damaged during railway transportation, it had to be returned to the factory for repairs, which are not yet completed.

## **Durham**

### **Cement Company's Distributing Station**

During the year a contract was completed with the National Portland Cement Company for supplying 1,000 h.p. per annum to the company's plant at Durham.

Work instructions were received in September for the installation of a 1,000-kv-a. frequency changer set to change the frequency from 60-cycles to 25-cycles for supply of power to the National Portland Cement Company at Durham, Ontario. The equipment will consist of two Canadian Westinghouse Company "GA-3" 26,400-volt oil switches and two Canadian General Electric Company electrolytic lighting arresters, instrument transformers with overload and reverse power relays to protect two incoming 22,000-volt lines. Three Canadian General Electric 250-kv-a., 22,000/2,300/575-volt, 60-cycle, self-cooled transformers to be transferred from Port McNicoll (C.P.R.) Distributing Station will be used to step the voltage down to 2,300-volts to supply the 60-cycle motor on the frequency changer set. This frequency changer set will deliver power at approximately 600-volts, 25-cycles to the Cement Company's bus bars. This equipment will be installed in the space in the boiler room of the Cement Company's plant made vacant by the boilers being removed.

The frequency changer set was manufactured by the Electric Machinery Company of Minneapolis and was purchased by the Commission. Work is being started on the installation of this equipment by the Commission, which will install the entire equipment. It is expected that this station will be in operation the early part of 1918.

## **Elmwood**

### **Distributing Station**

The construction of a standard pole type distributing station at Elmwood was authorized in November and all equipment was ordered. The station will consist of Hydro-Electric Power Commission air-brake switch, 50-kv-a., 3-phase, 22,000/4,000/2,300/575-volt, 60-cycle, Moloney Electric Company transformer, delta-star fuses and choke coils. The metering equipment will consist of a Canadian West-

inghouse Company "R.O." maximum demand meter with suitable instrument transformers housed in a metal meter house to measure the power supplied to the Municipality over a 4,000-volt feeder.

The construction work will be done by the Commission.

### Grand Valley

#### Distributing Station

The construction of a standard type "H" Distributing Station at Grand Valley with all equipment, as given in the last Report, was completed and put into service in August 1917.

The Municipalities of Grand Valley and Arthur were provided with temporary single-phase service from November 1916, until the new station was put in service.

### Hanover

Enabling and money by-laws were submitted to and carried by the ratepayers of the town, authorizing the execution of an agreement with the Commission for a supply of power and providing for sale of debentures covering the cost of purchasing and reconstructing the distribution system. Agreements were also completed with the Hanover Electric Light Company covering the purchase of the company's properties inside the limits of the municipality and with the Commission covering the supply of power.

Assistance was given by the Commission's engineers in addressing public meetings and giving general information in connection with the by-laws, also in carrying on purchase negotiations with the Hanover Electric Light and Power Company. A distribution system was designed and the construction of same authorized.

An agreement was also executed between the Commission and the Hanover Electric Light Company covering the purchase of all properties belonging to the latter, located outside of the municipality, with the exception of Maple Hill development.

The load in this municipality has every prospect of being one of the largest in the district.

#### Street Lighting

To supply the street lighting circuit the purchase of a 12-kv-a., 2,200-volt, 6.6-amp., constant-current transformer and panel for same was authorized by the municipality and orders were placed with A. H. Winter Joyner, Limited, for an Adams-Bagnall transformer. The Canadian General Electric Company will supply the switchboard panel.

#### Temporary Distributing Station

Owing to the increase in load, the two 40-kv-a., 22,000/2,200-volt, single-phase, Canadian Westinghouse transformers were taken out of service in April and were replaced by two 125-kv-a., 22,000/2,200-volt, single-phase, Canadian Westinghouse transformers which were transferred from Orangeville Distributing Station. The 40-kv-a. units were later transferred to Alliston Distributing Station.

#### Permanent Distributing Station

In June, a standard type "G" station was authorized to replace the temporary station and the building contract was awarded to Wells & Gray, Toronto. The building was completed in September.

The electrical equipment in the new station will consist of three Canadian Westinghouse 125-kv-a., 22,000/2,200/500-volt, single-phase transformers, with the necessary high tension equipment for one incoming 22,000-volt, three-phase line, and the low tension equipment for two outgoing 4,000-volt, three-phase feeders, one to supply Hanover and the other to supply Neustadt, Karlsruhe and Ayton.

The 22,000-volt oil switch, lighting arrester and current transformers, were purchased from the Canadian General Electric Company, and the choke coils, disconnecting switches and insulators were purchased from the Canadian Westinghouse Company. All this high tension equipment will be installed by the Commission. All the low tension equipment, except the meters and Garton-Daniels lightning arresters, will be supplied by the Canadian General Electric Company, who will also make the complete low tension installation. The station will be equipped with Weston indicating meters and Niagara Electric Improvement Corporation watt-meters.

As the permanent installation cannot be completed till the first of the year, arrangements are being made to have the station put in temporary service by the Commission until the permanent low tension equipment is received.

### Orangeville

#### Distributing Station

The new sub-station building referred to in last Report was finished. The new station was placed in service in February with temporary connections owing to failure of the 150-kv-a. Allis-Chalmers Bullock transformer, referred to in previous Report, using three 50-kv-a. transformers purchased from Moloney Electric Company, for the Shelburne Distributing Station, diverted temporarily to Orangeville. The damaged transformer was found to be not worth repairing, and was disposed of as scrap. One 125-kv-a., 22,000/2,200/550-volt, 60-cycle, transformer was ordered from the Canadian Westinghouse Company in January 1917, to complete the bank for this station, but following the failure above referred to, it was decided to duplicate the order, which was done in March.

Owing to release of three 150-kv-a. transformers from Midland Distributing Station, and the necessity for increased transformer capacity at Hanover Distributing Station, it was decided to transfer the three 125-kv-a. Westinghouse transformers from Orangeville Distributing Station to Hanover Distributing Station and to transfer the three 150-kv-a. Moloney transformers from Midland Distributing Station to the Orangeville Distributing Station. These 150-kv-a., 22,000/2,300/575-volt, 60-cycle Moloney Electric Company single-phase transformers were placed in service in Orangeville Distributing Station the end of April and the 50-kv-a. transformers thereby released from temporary service there were shipped to Shelburne Distributing Station at the same time.

The 22,000-volt electrolytic lightning arresters referred to in previous Report were placed in service the end of June. All details of the installation in Orangeville Distributing Station were completed early in September.

#### Alton Feeder

Work instructions were received for the installation of a 4,000-volt feeder in the Orangeville Distributing Station to supply power to the Village of Alton. This was accomplished by using one of the feeder panels transferred from Midland Distributing Station to Orangeville Distributing Station, as mentioned in last Report, and equipping this panel with a Niagara Electric Improvement Corporation

graphic maximum demand meter to measure the load. This work was completed by the Commission and put in service in March.

### Street Lighting

The two 10-kv-a. constant current transformers and panels, referred to in previous Report, were installed in the Orangeville Distributing Station for the municipality by the Commission and were ready for operation the latter part of June.

### Shelburne

#### Distributing Station

As stated in the last Report the original transformers were destroyed by fire while installed in the temporary building, and it became necessary to order new transformers and in the meantime carry the load with two 25-kv-a. Moloney transformers, which were intended for Coldwater Distributing Station. Since the last Report, the new three 50-kv-a., 22,000/2,300/575-volt Moloney transformers, which were temporarily used at Orangeville, were received and installed early in May by the Commission, and all work completed in this station, the high tension arresters being finally completed on September 1st.

### Street Lighting

The street lighting equipment mentioned in last Report as being temporarily installed in the Town Hall was transferred to the distributing station and permanently installed.

## WASDELL'S SYSTEM

### TRANSMISSION LINES

The high tension lines, consisting of 1/0 aluminum were replaced with 5/16-inch, seven-strand steel from the generating station to Beaverton, and with 1/4-inch, seven-strand steel from Beaverton to Cannington. A very considerable economy was effected by this change.

## MUNICIPAL WORK

### Beaverton

The installation of 22,000-volt lightning arresters in Beaverton distributing station was authorized in October 1916. It was decided to transfer the multi-gap Westinghouse arresters from Cannington distributing station. This work was done by the Commission and the arrester was placed in service in Beaverton distributing station in August.

### Brock Township

Service extensions have been made, supplying light and power to farms out of Cannington, and on the Cannington-Woodville 4,000-volt line.

### Cannington

As a 22,000-volt lightning arrester was required at Beaverton distributing station, it was decided to transfer the multi-gap arrester from this station to Beaverton distributing station, and to purchase an electrolytic type of arrester to replace it. Accordingly an order was placed with Canadian General Electric

Company on November 24, 1916, for an electrolytic arrester with accessories. This was shipped the latter part of June. Upon its arrival at Cannington, the Commission removed the multi-gap arrester from service and installed the electrolytic arrester, the work being completed on July 30th.

### **Gamebridge**

Power was delivered to this hamlet from the 4,000-volt Brechin line in June 1917. One power, four commercial and four domestic services have been installed.

### **Kirkfield**

Valuations were made and estimates completed on the construction of a 22,000-volt line from Gamebridge to the crushing plant at Kirkfield. Actual construction has been postponed until conditions become normal.

### **Raven Lake Portland Cement Company**

A valuation and report was made on the Raven Lake Portland Cement Company's system, with the idea of purchasing it and supplying power to the towns of Kirkfield, Minden and others in the district. An industrial survey was made of the district to determine the probable load. It was found, however, that the loads would be too small to warrant anything being done in this connection.

## **CENTRAL ONTARIO SYSTEM**

### **GENERAL**

#### **Rates**

The Commission's standard forms of rates were placed in effect in all the municipalities on this system on January 1, 1917, these rates applying to Power, Commercial Lighting and Domestic Lighting. In almost all cases the new rates to consumers are lower than those in effect before operation by the Commission was begun. Street lighting rates were reduced in several municipalities. All flat rates have been abolished and replaced by standard meter rates. There are still a small number of power contracts in force embodying obsolete rates, but these are being replaced by standard contracts as rapidly as they mature.

#### **General Stores Department**

A general storehouse has been established in Belleville, in which is kept a stock of line material, wiring devices, fittings, transformers and motors. Material is requisitioned from this storehouse by the various local offices as required, thus permitting the reduction of local stocks to a minimum, and ensuring the benefits of quantity buying and prompt delivery.

#### **Offices**

A number of local offices were found to be quite unsuited for the business of an electric utility, and as leases expired, improved quarters were obtained. In equipping new offices every effort has been made to ensure the comfort and convenience of customers and staff, as well as to make possible the merchandising of appliances with the greatest efficiency. New offices have been so equipped at Port Hope, Cobourg, Brighton, Napanee and Lindsay with very good results.

### Campbellford Pulp Mill

The operation of this mill has been continued by the Commission throughout the year. A supply of pulpwood for many years to come has been assured by the purchase of all the timber in the Township of Bruton in the County of Haliburton. In this limit there is a large supply of excellent spruce and balsam pulpwood as well as other timber. A number of camps are now operating in the Township, and it will not be necessary to purchase any further supplies from settlers as has been done in the past.

All the timber cut in Bruton Township will be driven down the York Branch of the Madawaska River and Baptiste Lake to Bancroft, where it will be taken out of the water and shipped *via* Canadian Northern and Grand Trunk Railway to Campbellford *via* Anson Junction.

The 600-ton pulp press has been completely installed, together with an intermediate pressure, triplex power pump, which make a full equipment of four presses and pumping plant, easily capable of producing 30 to 35 tons of air-dry pulp per day.

Estimates have been made on the cost of a two-machine news print mill and on the expansion of the present pulp mill to accommodate this equipment.

An accident occurred from the stripping of a thread in the flange clamping a grinder stone, which caused the shaft to move longitudinally together with the rotating parts of the attached 1,000 h.p. motor. The bearings were forced through the pedestals and caps, which were badly broken, one cap being in 15 pieces.

The pedestals and caps were shipped to Toronto, where they were pieced together, welded by the oxy-acetylene process, refitted to the bearings and returned ready for the motor within the time (about a week) required for the repairs to electrical connections on the motor.

### Spare Transformers

One 750-kv-a., 44,000/2,400-volt, 3-phase, 60-cycle, oil-insulated, water-cooled transformer, and two 300-kv-a., 44,000/2,400-volt, 3-phase, 60-cycle, oil-insulated, self-cooled transformers were ordered on December 14, 1916, from the Canadian General Electric Company, to be used as spare units on the Central Ontario System. Tests on these were witnessed at the factory by the Commission's inspector. One of the 300-kv-a. transformers was installed by the Commission at Madoc sub-station and the other at Port Hope sub-station. The 750-kv-a. unit is held at the Canadian General Electric Company's factory for the present.

## POWER CONSTRUCTION

### Auburn Generating Station

The feeders across the Otonabee River to the lines to Peterboro and the Auburn Woollen Mills Company were rebuilt of heavier material to replace the old river crossing which was getting into a dangerous condition. A feeder panel, metering, equipment, switches, and a lighting arrester were installed to take care of service to the Auburn Woollen Mills Company.

### Fenelon Falls Generating Station

Arrangements have been made and a contract proposed under which the Light and Power Commission of Fenelon Falls will sell to the Commission all the

surplus power from the municipality's Generating Station. The old 11,000-volt air-blast transformers in the Commission's Generating System at Fenelon Falls will be discarded and new water-cooled transformers installed to step up the voltage from 600 to 44,000 volts, at which voltage energy will be transmitted to Lindsay.

Oil switches have been installed to replace the old knife switches which were not suitable for operation under present conditions and synchronizing equipment was also installed so that the plant could be synchronized with the rest of the system.

New meter equipments have been supplied, so that complete records of the power generated at this point could be obtained.

In order to permit of a higher voltage transmission to Lindsay, the existing double circuit 11,000-volt line will be converted into a single circuit 44,000-volt line.

### Healey Falls Generating Station

The load demands on the Trent River power system made it necessary, in January 1917, to consider extensions to the Healey Falls plant, which is located on the Trent River, about six miles from Campbellford. The Healey Falls Generating Station was originally designed for the installation of four 5,600-brake h.p. turbines, of which two were erected in the completed power house building.

It was decided to install a third penstock, a third unit of the same capacity as the old units (3,750-kv-a., 6,600-volt, 60-cycle, 3-phase, 240 r.p.m., waterwheel type horizontal shaft generator), and to complete the tailrace excavation for the final development.

In May the contract for a steel penstock about 460 feet in length and twelve feet in diameter was let to the Dominion Bridge Co., of Montreal, erection to commence in December 1917. A contract was also let at the same time for a 5,600 h.p. turbine, a double runner, cylindrical casing running at 240 r.p.m., under 72 feet head, to the Wellman-Seaver-Morgan Company, at Cleveland, delivery in February 1918.

Progress on these two contracts has been satisfactory, and it is expected that they will be ready at the required dates of delivery.

Early in June 1917, work was started on the excavation for the penstock line. This was completed in July. Arrangements were made with the Dredging and Dock Company in September for the rental of their dredge, scows and tug for use in removing the excavation for the tailrace and dredging was begun about September 8th.

The amount of material to be moved, most of which is rock, below water level, is about 30,000 cubic yards. This yardage removed to October 31, 1917, is approximately 12,000 cubic yards. It is expected that the balance of this material will be removed before the new unit is ready for operation, and that the new penstock together with the turbine unit will be completed about April 1918.

A contract was awarded March 15, 1917, to the Swedish General Electric Company for one 3,750-kv-a., 6,600-volt, 60-cycle, 3-phase, 240 r.p.m. waterwheel type horizontal shaft generator to be shipped from their factory in Sweden in March 1918, and installed in Healey Falls Generating Station, at the earliest possible date thereafter. The order for the complete switching and metering equipment necessary to place this generator into service was awarded to the Canadian Westinghouse Company, March 17, 1917, for shipment in January 1918. The manufacture of both generator and switching equipment is proceeding and shipping promises will be met.

On account of the expense of getting coal to Healey Falls, it was decided to install electric heaters, which, with the radiation from the machines, will serve to keep the power house at a comfortable temperature.

The switchboard gallery has been enclosed by a metal partition, ordered from the A. B. Ormsby Company on April 21, 1917. The erection of this was completed in October. This will allow the gallery to be heated to a higher temperature than the rest of the power house without the expenditure of too much power.

The generator pits, transformers, pockets and switching galleries have been painted with white enamel, which considerably improves their appearance.

On account of the difficulty of taking care of the operators at this point, it has been necessary to build a new operator's house, which is a duplicate of that constructed at Napanee.

In April a short study was made of applying electrical operation to the 12 by 12 ft. penstock butterfly valves, but the matter was referred to the Hydraulic Department for further information.

On July 28, 1917, orders were placed with the Mechanical Appliance Company and the Canadian Blower and Forge Company for two motors and two fans respectively to assist in the ventilation of the generating station. It is expected that these will be installed early in 1918.

### **Seymour Generating Station**

Old and inadequate switching equipment on lines K. and G. was replaced by C.G.E. Type K 10, 44,000-volt, automatic circuit breakers.

Two generators which were burned out by lightning have been rebuilt complete. One of them is still out of service, but will be ready shortly. No reduction in the output of the system was caused on account of the failure of these machines. A new storehouse has been built to replace the old one, which was inadequate and in a poor state of repair.

### **Sydney No. 2 Transforming Station and Generating Station**

On account of the difficulty of obtaining and keeping help at Trenton, which is caused by the lack of necessary accommodation, it has been found advisable to build an operator's cottage, similar to the one erected at Napanee, and a large house which will be used as a boarding house for our unmarried operators and for the accommodation of maintenance and construction men working at this station.

New equipment has been installed in the transforming station to accommodate the line from Healey Falls, which will be put into service at an early date.

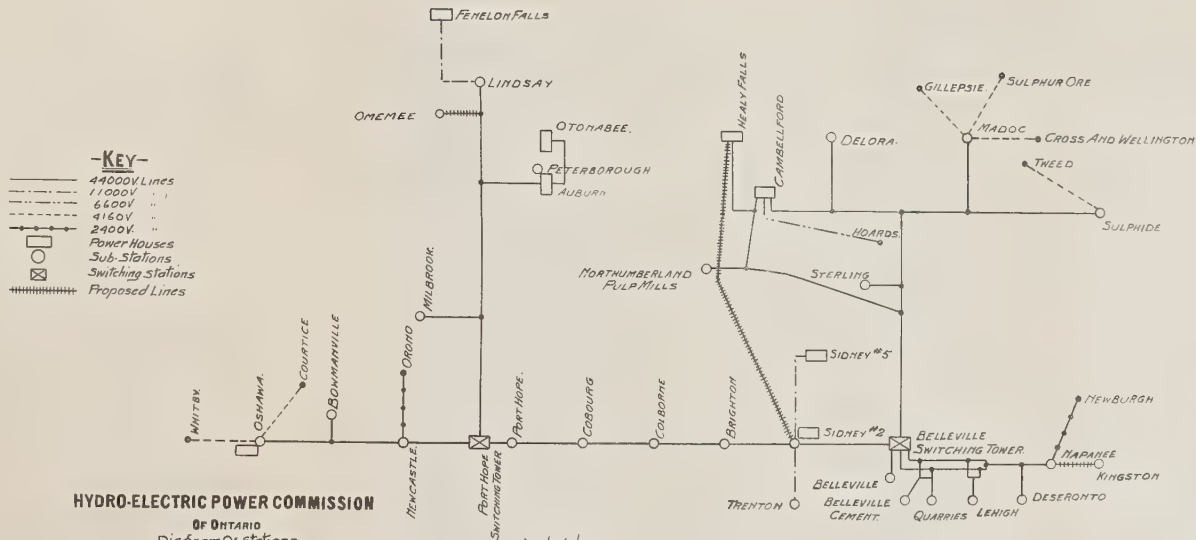

The parapet wall around the roof of the transforming station had to be removed on account of the damage caused by water leaking down through the coping. It was decided on account of other experiences with this type of roof to change the style and to use a flat roof all round.

A new type H.3 automatic, electrically operated, circuit breaker was purchased to take care of the new feeder to Trenton.

### **Sydney No. 5 Generating Station**

The original switches on the switchboard at this place were found to be too small and have been replaced by heavier types of equipment.

Minor changes have also been made in the wiring, and some of the equipment has been rearranged to give increased clearances.

# HYDRO-ELECTRIC POWER COMMISSION

OF ONTARIO  
Diagram Of Stations  
Central Ontario System

Revisions: 25 October, 1916  
 25 October, 1917.

Approved,

*J. G. A. G. A.*  
 CHIEF ENGINEER

C-154.

## TRANSMISSION LINES

It was thought advisable to commence replacing a number of old insulators with new units, a number of which were erected during the year. All new insulators have been put up on wood pins so as to increase the safety factor of insulation.

The old line, no longer in use, between the Auburn and Otonabee Generating Stations, was dismantled and over 13,000 pounds of copper recovered.

The aluminum conductor on the Millbrook tap was replaced by iron wire, which is ample to handle the load at this station. A reasonable profit on the transaction has been effected. The 44,000-volt tap from the main line to the Deseronto sub-station was moved from its old location in order to provide a clear space for the Aviation Camp established at Deseronto.

A 44,000-volt wood pole transmission line has been constructed from Healey Falls to Trenton *via* Campbellford in order to make available the new 3,750-kv-a. unit at the generating station. This line is connected to the 44,000-volt transmission system at the switching station located at Dam No. 2, Trenton.

## MUNICIPAL WORK

### Belleville

An electrically-driven pumping plant will shortly be completed for the water supply of the city, replacing two steam units and one electric unit of old design. The building has been enlarged for the reception of the new plant, which will consist of one 780 Imperial gallons per minute, 2-stage, turbine pump with 100 h.p. motor, two 1,250 gallons per minute pumps each with 125 h.p. motor, and one 1,560 gallons per minute pump with 150 h.p. motor, operating against 250 feet total head for domestic service, the same pumps delivering 500, 750. and 1,000 gallons per minute respectively against 325 feet head for fire service.

The pumps are of standard De Laval construction, each unit consisting of two double suction single stage pumps connected in series. Current will be supplied by two sets of transformers mounted on a pole structure outside the pump-house, with the usual switches and other equipment, each set of transformers being served by a separate transmission line.

### Bloomfield

Enabling and money by-laws were passed by large majorities on August 31, 1917. A number of petitions have been received from farmers in the surrounding district for a supply of light and power. It is proposed to serve the municipality by a 4,000-volt line from a pole-type sub-station at Wellington.

### Bowmanville

The telephone line from Oshawa to Trenton was looped into Bowmanville sub-station so that the line could be sectionalized there in case of trouble.

### Brooklin

In connection with the Whitby Township rural extensions out of Oshawa, the village of Brooklin has applied for light and power, and service will be given early in 1918. An efficient system of ornamental series street lighting is being installed under the supervision of the Commission.

Power will be transmitted from Oshawa at 4,000 volts over a single-circuit line of No. 6 copper.

### Cobourg

#### Street Lighting

The Commission has installed a new street lighting system in Cobourg, the work being completed on June 16, 1917. The circuits and poles of the old system were rearranged and put in good order, and the 35 enclosed arc lamps and 75 incandescent lamps of 80 c.p. each, were replaced by gas-filled lamps in modern fixtures. The residential districts are now lighted by 301 units of 100 watts each, and the business district by 17 units of 500 watts each. The arc light regulator was replaced by two constant-current transformers, each of 25-k.w. capacity.

#### Waterworks

The new waterworks intake and suction well was completed before hard weather set in last winter, and trouble from frazil ice and turbid water previously experienced have completely disappeared.

A new design of automatic coagulant and chlorine feed apparatus has been installed, and is operated by a turbine in the intake. This turbine utilizes the velocity head only, whereby correct distribution of the chemicals at all times is obtained in proportion to the quantity of water flowing to the suction well, which varies from 300 to 1,800 gallons per minute for domestic consumption.

The first unit of a pair of gasoline-driven fire pumps has been connected up to the city mains and is ready for testing. Each unit will deliver from 1,000 to 1,200 gallons per minute, and special precautions have been taken to avoid fire in the station, by placing auxiliary gasoline tanks and gasoline pumps outside the building, with tell-tales and extension pump shafts within the pump house, convenient for operation.

### Deloro

The sub-station switchboard wiring has been revised in accordance with modern practice. Old graphic meters have been replaced by new equipment which will allow a more accurate determination of the load.

### Edwardsburg Township

Petitions have been received from a number of farmers in this township asking for estimates on the cost of rural power. These estimates have been submitted to the township authorities for consideration.

### Hallowell Township

Petitions have been received from several sections of the township for a supply of rural power.

### Kingston

In December 1916, a contract for a supply of 1,200 h.p. to be delivered from the Commission's Central Ontario System was ratified by the local commission, and later passed by the council.

Preparations were at once begun on the construction of a 44,000-volt transmission line between Napanee and Kingston. In April 1917, the Commission was authorized to design and supply electrical pumping equipment for the city.

It is expected that the load will be over 1,500 h.p. An annex has been built to the present pumping station intended to conveniently accommodate a motor-

operated plant sufficient for future requirements of the city and one unit of 3,500 imperial gallons per minute.

#### Distributing Station

Arrangements having been made by the Commission with the Kingston Civic Utilities by which a portion of their steam power plant building, with certain necessary alterations, could be made use of as a distribution station, plans and specifications for the reconstruction work were prepared and contract awarded to Mr. R. N. MacFarlane, contractor, Kingston.

Two 750-kv-a., 44,000/4,160/2,400-volt, three-phase transformers were ordered from the Canadian General Electric Company on December 3, 1916, and a third similar transformer on March 17, 1917.

Existing stock orders were made use of to obtain quick delivery on a Canadian Westinghouse type "GA-3," 44,000-volt oil switch and a Canadian General Electric 44,000-volt electrolytic lightning arrester. The contract for the remainder of the electrical equipment, including low tension switchboard, was awarded the Canadian General Electric Company.

The alterations to the building were commenced on August 13th, and the first transformer will be delivered about December 1st.

#### Waterworks

An annex has been built to the present pumping station intended to conveniently accommodate a motor-operated plant sufficient for any future requirements of the city, and one unit of 3,500 imperial gallons per minute capacity is nearly ready for installation. This unit will operate against a head of 210 feet, and consists of a 12-inch double suction, single-stage DeLaval turbine pump, connected through a flexible coupling to a C.G.E. synchronous motor of 380-kv-a. at 1,200 revolutions per minute, with the usual exciter and switchboard equipment.

A 24-inch steel suction pipe is connected to the present intake pipe at a point about 150 feet from the pump-house, and is of a temporary nature, consideration having been given to the construction of a suction well in connection with a new intake, low-lift pumping and filtration system.

The discharge from the pump is connected to a new 24-inch main fitted with recording Venturi meter.

#### Lindsay

Plans and estimates were drawn up for an extension of the White Way on Kent street in this municipality.

#### Madoc

Totalizing current transformers have been installed so that a record can be kept of the summation of loads supplied from this station. A 300-kv-a. oil-insulated, self-cooled, 3-phase, 60-cycle, 44,000-4,160-volt transformer was installed to provide standby equipment needed on account of the existing apparatus being fully loaded. New metering equipment was installed for various consumers in the district about Madoc.

#### Napanee

The approval of the Municipal Council was secured for the dismantling of the steam generating plant and the boilers, and most of the machinery has been disposed of by sale.

The connections in Napanee sub-station have been changed over from 2,400 volts to 4,160 volts, enabling power to be fed over the new line to Newburgh and Camden. The feeder panel and metering equipment were installed to accommodate the Newburgh and Camden feeder, and a blank panel was provided to fill the remaining vacant place in the board.

On account of the construction of the line from Napanee to Kingston, it has been necessary to build an operator's house at Napanee sub-station. A five-room house was erected and provided with all modern conveniences, including electric heating. The operator living at this point will attend to the switching on the Kingston line, and the regular patrol of a section of the line, besides taking care of the sub-station.

### Omemee

The construction of a pole-type distributing station at Omemee was authorized and three 40-kv-a., 44,000/2,400-volt, 60 cycle, single-phase, outdoor-type transformers were ordered from the Moloney Electric Company on May 4, 1917. Drawings were completed and balance of material required was ordered.

The station will be of the outdoor type with 44,000-volt disconnecting switches, choke coils and fuses, and with the 4,000-volt oil switch and the metering equipment including a General Electric graphic recording wattmeter, placed in a small galvanized iron kiosk.

Owing to commercial conditions the transformers were not shipped as early as promised, but it is expected that this station will be ready for service about January 1, 1918.

A new street lighting system is being installed in Omemee under the supervision of the Commission.

The installation of the necessary transforming equipment, transmission line and distribution system has been practically completed, and power will be turned on from the Central Ontario System early in 1918.

Current will be delivered to the municipality at a pressure of 4,000 volts from the Commission's pole-type sub-station one mile north of the village limits.

### Oshawa

A Diesel engine-driven generating unit, formerly used as a reserve source of supply, has been sold, as its capacity was too small to be of material value in case of an interruption to the 44,000-volt supply. It is intended to construct a second 44,000-volt line to Oshawa as soon as normal construction costs again prevail. The 1,200-k.w. generator, formerly in the Otonabee Generating Station, is being installed at Oshawa for power factor correction and voltage control.

### Peterborough

Requests have been received from the Peterborough utilities system to prepare plans for a new sub-station. It is intended to proceed with the construction of this building during the summer.

### Gas Works

A contract was let to the Economical Gas Apparatus Construction Company in April 1917, for the supply and erection of a second carbureter-super-heater, washer, oil-heater, scrubber, water-cooled tubular condenser, oil pumps and accessories, complete with piping and connections, at a price of \$10,263, to be used in

connection with a new generator, which was furnished by the William Hamilton Company.

### Pickering Township

Requests and individual contracts for a supply of light and power have been received from the Hamlet of Greenwood. It is proposed to serve this section over a 4,000-volt line from Brooklin.

Requests have also been received from Pickering Village and an investigation of the probable requirements for this section has been made.

### Picton

Following the urgent request of municipalities in Prince Edward County, estimates were prepared early in the year on the costs of a supply of power from the Central Ontario System.

Enabling and money by-laws were passed by very large majorities on August 31st. It is proposed to serve this town over a 4,400-volt, single-circuit line from Trenton. Power will be delivered to the municipality at 2,300 volts, from the Commission's sub-station within the town. The present 2,300-volt, 3-wire, 2-phase line will be rearranged for 2,300-volt, 3-phase operation. An electrically-driven, centrifugal pump will be installed in the local pumping-station under the direction of the Commission.

Estimates have been prepared and tentative designs made for a distributing station for Picton; also prices have been obtained for the necessary transformer.

### Port Hope

Electric heaters were installed at the sub-station and have been very satisfactory. It was unnecessary to use any coal for heating purposes during the last winter, which allowed a substantial saving to be made. A flying panel was installed in the switchboard to fill a vacant space caused by a feeder panel being removed to another station.

A 300-kv-a. oil-insulated, self-cooled, 3-phase, 60-cycle, 44,000/2,400 and 4,160-volt transformer was installed to replace the 750-kv-a. unit moved to Oshawa last year. This increased the capacity of the Port Hope sub-station to 1,050-kv-a.

Work was commenced on changing over the high tension line entrances from roof to wall type, the roof bushings having been found unsatisfactory and a hazard to service.

### Waterworks

A report has been made on the waterworks pumping system of the town, wherein it was shown that considerable saving would be made by electric pumping in place of steam pumping under normal conditions of fuel cost, and proportionately larger saving under present coal prices.

### Port Perry

Several resolutions and requests have been received for estimates on the cost of a supply of power. Estimates are being prepared on power at 4,000 volts from Oshawa *via* Columbus.

### Sulphide

Graphic reactive volt-ampere meters were installed to replace the power factor meters which were not accurate enough on such an important load.

Part of the switchboard was destroyed by lightning and arrangements have been made to install more up-to-date equipment and to rebuild the switchboard room to provide more adequate clearances.

Authorization has been given to proceed with the design of an extension to the Sulphide distributing station, including switching equipment to replace that recently destroyed by fire. The preliminary work is under way.

### Trenton

A report was prepared for the municipal council on an ornamental street lighting system for the main business streets.

Negotiations have been carried on between the Commission and the municipal council leading toward the sale of the local waterworks of the town.

The power load in Trenton has increased very largely owing to the operations of the British Chemical Company. This plant has a demand of 4,500 h.p. and is supplied by a 6,600-volt line from the generating station at dam No. 2.

A 750-kv-a., 3-phase, 60-cycle, 6,600/4,160-volt transformer was installed at Trenton sub-station, to relieve the old 100-kv-a., self-cooled units which were loaded beyond their capacity.

An additional constant-current transformer was also installed to take care of the increase in the street lighting load, occasioned by the industrial activity of the town.

Another circuit of No. 0000 aluminum was run from Trenton sub-station back to the terminal transforming station at dam No. 2, to take care of the increased load and to insure uninterrupted service.

Work is proceeding on the design of a sub-station at Trenton for distributing power received from the Sidney Power House. This station is to replace the present one which is inadequate. One 750-kv-a., 6,600/2,400/600-volt, 3-phase, 60-cycle transformer has been ordered from the Canadian General Electric Company so as to meet the increased requirements.

### Uxbridge

Several requests have been received from the town officials for estimates on the cost of a supply of power. Up to the present no suitable scheme has been devised for serving this district from Hydro lines as at present constructed.

### Wellington

Acting on the urgent request of the village officials, estimates were made on the cost of a supply of power from the Central Ontario System. A valuation was also made of the local privately-owned plant, and negotiations opened whereby the municipality will take over the present distribution system and remodel it to suit modern requirements.

Enabling and money by-laws were passed by very large majorities on August 31st.

It is proposed to serve this village, together with Bloomfield, from a pole-type, step-down station at Wellington.

Estimates have been prepared and tentative designs made for a distributing station for Wellington, and prices have also been obtained for the necessary transformer.

### Whitby Township

Petitions were received from a large number of farmers and hamlet residents in the township, and construction of rural lines approved by the township council after estimates were submitted by the Commission.

Lines are being constructed from Oshawa to Brooklin and Columbus, power being delivered over a 3-phase, No. 6 copper, 4,400-volt line. Twenty-two farms, as well as the hamlets of Brooklin and Columbus, will be served by this extension.

## MUSKOKA SYSTEM

### POWER CONSTRUCTION

#### South Falls Generating Station

The Commission's reports for 1915 and 1916 describe the taking over of this plant from the Municipality of Gravenhurst, and the changes and additions made in its equipment. This plant is located on the south branch of the Muskoka River, about three miles from the Town of Bracebridge, and is at present supplying energy to the Municipalities of Gravenhurst and Huntsville.

In addition to the work noted in the Commission's Report for 1916, the highway road was raised to permit using the maximum headwater level on the plant. This work was completed in November 1916.

Concrete saddles were placed under No. 1 steel penstock, loose earth and debris were removed, and the pipe was scraped and painted.

The final coat of paint was placed in the spring.

The old turbine was overhauled in December and work was practically completed in the same month. The governor supplied by the turbine manufacturer for the new machine, did not prove satisfactory under service conditions, and in February 1917, it was decided to order its removal and to have another type of governor installed. Due to the abnormal market conditions the new governor has only recently been delivered, and is not yet installed, but more efficient operation and better regulation will undoubtedly result when it is put into service.

On November 23d an order was placed with the Canadian General Electric Company for one 12-k.w., 125-volt, inter-pole compound wound, 1,800 r.p.m. exciter, complete with slide rails. This exciter will be belt-driven from the 750-kv-a., 720 r.p.m. generator. A 14-inch pulley with 6-inch face was supplied and installed on an extension of the shaft of the 750-kv-a. generator. This exciter is intended for emergency operation only.

On January 4th an order was placed with the Canadian General Electric Company for two 16-inch by 90-inch black slate panels complete with framework, small wiring, test link panels, etc., also for two 100/5 ampere, 6,600-volt current transformers. One panel is for the purpose of mounting one Westinghouse graphic recording wattmeter and one Westinghouse graphic recording power factor meter for the Gravenhurst feeder. The other panel is for mounting the Westinghouse graphic recording wattmeter and one Esterline graphic recording voltmeter, which record the station load and voltage. The current transformers were supplied to replace the present transformers on the 450-kv-a. generator in order to have them the same as those on the 750-kv-a. generator for the purpose of paralleling same on the station wattmeter. This equipment has been delivered at the station and will be installed early in November.

On July 10th the order was placed with the Canadian General Electric Company for one type "Ta-110" form "K-5" Tirrill Voltage Regulator with panel, with accessories. This regulator with panel is expected to be ready for shipment from the factory of the Canadian General Electric Company's Peterboro plant in December.

### Gravenhurst

An additional power load of 250 h.p. has been secured from the National Potash Corporation. A single-phase induction regulator is being installed on the lighting feeder to improve voltage conditions.

### Huntsville

A large number of meters, which had formerly been used on 133-cycle current, were rearranged at the Commission's laboratories for 60-cycle service.

A 75 kilowatt stand-by generator was purchased through the Commission in July 1917. This has been installed in the town's generating station.

### Distributing Station

Although this station was placed in service during the month of August 1916, the Canadian General Electric Company did not complete the installation of equipment until January 1917.

### Stephenson Township

Estimates are being prepared on the cost of supplying the Hamlets of Utterson and Port Sydney with light and power. It is proposed to install a single-phase, pole-type sub-station in Utterson, to transform the current from 22,000 to 2,200 volts, for distribution to the villages.

## ST. LAWRENCE SYSTEM

### GENERAL

Numerous requests have been received by the Commission asking for investigations of the possibilities of supplying light and power by means of hydro-electric systems, and in such cases the Commission has obtained the necessary information. Estimates have been prepared showing the prices at which power could be supplied to the municipalities and these have been forwarded to the municipalities in question.

Engineering assistance has also been given to a great many of the operating towns on matters connected with rate application, economical operation of local systems, and in increasing the light and power business.

### TRANSMISSION LINES

The 3/0 aluminum lines between Morrisburg and Winchester were replaced by 5/16-inch, seven-strand steel. A considerable reduction in the fixed charges on this section of the system was thus effected.

ST LAWRENCE SYSTEM  
60 CYCLES

QCT 4th 1947

STATIONS & LINES WHICH ARE NOT COMPLETED BY 1900

## STATION CONSTRUCTION

### Cornwall Transformer Station

Instructions were received in August 1917 to proceed with the design and purchase of material for a transformer station, to be located at or near Cornwall. This station will receive power at 110,000 volts, 60-cycle, from the Cedar Rapids Transmission Company and transform to 26,400 volts for distribution through the eastern district. Plans are now being prepared for this station.

## MUNICIPAL WORK

### Brockville

Negotiations have been carried on during the year for an additional supply of power for the St. Lawrence System. It is proposed to construct, early in 1918, a transmission line between Cornwall and Morrisburg to transmit power to this system from the lines of the Cedar Rapids Transmission Company. Power will be taken at 110,000 volts and stepped down to 26,400 volts for transmission to Brockville and other towns on the system.

### Chesterville

A very satisfactory increase in the power load has been brought about by the addition of the Maple Leaf Condensed Milk Company's power requirements.

## OTTAWA SYSTEM

### MUNICIPAL WORK

#### Ottawa

Estimates were prepared on the cost of heating the new Parliament Buildings by electric power.

Requests were received from the local Hydro-Electric Commission for an additional supply of 2,000 h.p. for the new Lemieux pumping station. This additional power was procured from the Ottawa and Hull Power Company, on the existing contract between the company and the Commission.

## RIDEAU SYSTEM

### MUNICIPAL WORK

#### Almonte

The reconstruction of the distribution system was completed in February 1917. The new unit has given the best of satisfaction and a considerable addition has been made to the power load.

Exhaustive investigations have been made throughout the year with a view of co-ordinating all the power sites in the town under a single efficient development.

The construction of the new street lighting system, under the supervision of the Commission, was completed. The system was placed in operation on February 13, 1917. The system includes 106 units of 150 candlepower and 26 units of 400 candle-power, all of which are of the bracket type, mounted on wood poles. The

lamps, which are nitrogen-filled, are operated on a 6.6-ampere, series circuit, which is regulated by a 25-k.w. constant current transformer.

#### Carleton Place

The town council on June 14, 1917, passed a resolution requesting estimates on the cost of Hydro power. Negotiations are at present under way, with a view to the purchase by the town of the present distribution system.

#### Kemptville

Resolutions were received in August 1917, from the Village of Kemptville, requesting an estimate on the cost of 100 h.p. Exhaustive investigations were carried out by the Commission, with a view to including this village in a comprehensive system for the eastern district.

#### Lanark

Resolutions requesting an estimate on the cost of a supply of light and power were received from the town officials. It is proposed to include this town in the Eastern District system mentioned in the foregoing item.

#### Merrickville

Arrangements have been completed providing for the purchase of a supply of power from the Rideau Power Company, at Merrickville, for transmission to Smith's Falls and the surrounding district. Power will be stepped up from 600 volts to 26,400 volts, at the Rideau Power Company's power stations, and transmitted over a single-circuit, 5/16-inch steel line. Power will be delivered to Smith's Falls early in 1918.

#### Rideau Power Company

At the request of this company engineering assistance in connection with the design of a transformer installation in the company's generating station at Merrickville was authorized in October 1917. Tenders were drawn up calling for three 250-kv-a., 600/26,400-volt, 60-cycle transformers. Plans are now being considered.

#### Perth

At the request of the town officials, valuations were made of the existing power-plant, distribution system and waterworks, equipment by the Commission. Negotiations were begun, which led to the purchase of these utilities by the municipality.

Enabling and money by-laws were placed before the electors on August 28, 1917, and passed by large majorities. The town will operate the utilities with the present steam and water powers until the Commission's lines are completed from Merrickville.

#### Distributing Station

A sub-station to distribute power for Perth is being designed, to receive power from Merrickville. One 750-kv-a., 44,000/25,300/4,160/2,400/600-volt, 60-cycle, 3-phase, O. I. W. C. transformer for this station has been purchased from the Canadian General Electric Company.

Surge Tank at Nipissing Completed with Exception of  
Frost-proof Lagging.

Surge Tank at Nipissing During Construction.

### Smith's Falls

Exhaustive investigations have been carried on throughout the year to secure the best means of supplying Smith's Falls and adjacent towns with an adequate amount of light and power. Arrangements have been completed, by which a supply sufficient for present needs will be purchased by the Commission from the Rideau Power Company, at Merrickville and transmitted to the towns over a single-circuit, 26,400-volt line.

Valuations were made by the Commission of the two existing plants and distribution systems in the town, and negotiations completed whereby these utilities are to be taken over and operated by the municipality as a single system. Enabling and money by-laws were passed by large majorities on August 23, 1917, and construction was begun immediately. It is expected that power from Merrickville will be turned on in Smith's Falls early in 1918.

### Distributing Station

Work is proceeding on the design of a sub-station at this point to distribute power received from local generating stations and from the Rideau Power Company at Merrickville. One 750-kv-a., 44,000/25,300/4,160/2,400/600-volt, 60-cycle, 3-phase, O. I. W. C. transformer has been ordered from the Canadian General Electric Company for this station.

## NIPISSING SYSTEM

### POWER CONSTRUCTION

#### Nipissing Generating Station

A new differential surge tank of steel has been installed in order to improve the speed regulation of the turbines and to reduce water surges in the pipe-line. The old tank was of wood and was in a poor state of repair. It will be removed from service in the spring. The new tank was supplied by the Canadian-Chicago Bridge and Iron Company in January 1917.

About 260 yards of concrete were placed. The new tank has a diameter of 18 feet, the gallery is 32 feet above the foundations, and the cylinder is 46.5 feet high, making an overall height of 72.5 feet.

The tank and riser are housed with a double layer of ship-lap with building-paper between, and four 10-k.w. heaters provide the necessary warmth to prevent freezing.

At the date of this report the new tank has not yet been placed in service. Preparations are being made to do so immediately.

Generator No. 3 developed trouble in the windings, and it was decided to have it removed. This work has been completed.

A modern septic-tank and sewage-disposal plant was installed at the power-house.

Preparations have been made for the installation of a storage dam in the vicinity of Cox Chutes, on the South River, as soon as the prices of materials and labor return to normal. All the necessary land has been secured.

## MUNICIPAL WORK

### North Bay

Plans and estimates were prepared for a new storehouse at North Bay, but it was decided to postpone the erection of this building until a later date.

A new stack was purchased and erected on the North Bay steam plant for No. 2 boiler, and another stack will be replaced as soon as it can be fabricated.

A new generator is being purchased to replace the one recently burned out, and it is expected that a number of changes will be made in the steam plant in order to increase its capacity and efficiency for stand-by service.

Considerable additional load in motors has been secured and the sale of electric ranges and appliances has been exceptionally good.

### Powassan

A set of three-phase, Delta Star lightning arresters were installed at the Powassan station as a protection to the high tension transformers. A three-pole air-brake disc switch was also installed.

## PORT ARTHUR SYSTEM.

### MUNICIPAL WORK

#### Fort William

On January 1, 1917, by a vote of 700 for to 71 against, the ratepayers of Fort William expressed their approval of making a power agreement with the Commission. This by-law, however, was so drawn that it was necessary for the ratepayers to vote on the actual power agreement after it was submitted. This was accordingly done and on September 19, 1917, by a vote of 548 for to 82 against, the ratepayers approved of the new power agreement between the City of Fort William and the Commission. This agreement will take care of the city's power requirements after the expiration of the city's present power agreement with the Kaministiquia Power Company, or should the city desire to do so, it will provide power from the Commission in excess of that required to be taken from the Kaministiquia Power Company.

#### Port Arthur

On January 1, 1917, the ratepayers voted 712 for to 22 against, making a new power agreement with the Commission. Later in the year the new power agreement was accordingly executed with the City of Port Arthur. The old power agreement with the City expires early in 1920, and the new agreement is to provide for the continuation of a power supply through the Commission and to take care of the growth in power demand in Port Arthur and the vicinity.

## SECTION V

### GENERAL ACTIVITIES OF THE COMMISSION

#### ELECTRICAL INSPECTION

At the close of the last fiscal year the Commission's electrical inspection work had not been extended to all points in the Province, there being a few outlying districts in which it had not been found possible to secure suitable inspectors. As pointed out, the amount of work which would be involved in some of these small districts, would not warrant the expense of placing an inspector there, as only a small portion of his time would be occupied. The Commission has endeavored to locate suitable men for inspection duty in these places, and efforts have been made to secure men who are otherwise occupied, and who possess sufficient knowledge of the work to enable them to be trained in the duties of inspectors. The points referred to were the Sault Ste. Marie, Kenora, and Haileybury districts. The Commission has been able to secure suitable inspectors at these points, and their work has been commenced.

At the close of the last year the entire inspection system comprised 370 municipalities. This has now been increased to 501, so that there is practically no section in the Province without electrical inspection. By a rearrangement of the different inspection districts a continuous chain of offices has been established, thus placing every section of the Province in some inspection district. Inspection work is being handled throughout the Province with dispatch and uniformity.

During the past year there have been recorded 113,863 inspections, an increase of 13,076 over the year 1916. These figures do not include various other inspections of old installations and other separate inspections which were made by the Commission in the course of the year.

Reference was made in the last report to the overlapping of the Power Commission Act and legislation governing the Theatres, Cinematographs and Mining Departments respectively. During the past year the Rules and Regulations of the Commission and the Theatre Departments have been adjusted in a manner entirely satisfactory to both bodies, so that all confusion which may have been caused by the overlapping of these Acts has been entirely eliminated. However, legislation affecting the Department of Mines still conflicts with the Power Commission Act.

Shortly after the Commission had appointed inspectors for the Cobalt district a canvass was made of the mines in this and other districts, with the result that the majority of these mines entered into contracts with the Commission to perform a monthly inspection in their mines in accordance with the factory inspection system which was inaugurated last year. The Commission's inspectors reported that there was much dangerous and defective work in these places, but shortly after the work of inspection was begun it was necessary to abandon it, owing to the fact that these mines were already subject to inspection by the Department of Mines, and the Commission's inspection would impose what was considered to be another unnecessary inspection upon the mines.

This Annual Inspection Contract System was referred to in last year's Report. At that time it had just been inaugurated. This system has proved exceptionally satisfactory, and the Commission has at the present time 389 annual inspection

contracts, the annual fees for which amount to \$12,021. It has been found in practically every instance that mine owners are willing to enter into these agreements with the Commission. The only objection has been that there were two Acts governing the same inspection.

The Commission's Rules and Regulations have been kept well abreast with current changes and practice, and have been altered and amended with new Regulations as has been found necessary. These new regulations have been carefully prepared and have been approved by Order-in-Council.

Test cases in police courts have shown that the Regulations are in order and convictions have been registered by magistrates with little hesitation in all parts of the Province where information has been laid for violations of the Rules. This has had a salutary effect, and contractors and others now make little attempt to evade the Regulations. Considering the very large number of inspections recorded there has been no cause for complaint, and any alleged grievances have been quickly and satisfactorily adjusted.

Considerable energy has been devoted to the re-inspection of old installations for the purpose of calling for the necessary overhauling of defective and dangerous work. This has been very seriously handicapped by the scarcity of labor and the abnormal rate of wages and price of material. In spite of this fact, however, the Commission has succeeded in securing an expenditure of \$109,045.79 in the remodeling of these old installations during the period of five months, from June 1, 1917, to October 31, 1917. These figures are fairly accurate, as all such work is recorded on daily reports received from each inspector. On these reports are recorded all inspections and fees collected, the expenses of each office, and each week all collections of fees are balanced with the inspectors' reports and bank deposits, so that the work and records of each inspection office are under accurate supervision.

The approval of electrical fittings, materials and devices is at the present time a live issue, and an urgent appeal is being made by all bona fide manufacturers of such material for a rigid set of regulations which will compel all parties to comply with a safe and uniform standard, in the same manner which is now in force in nearly all the large American cities and most of our western cities, prominent among which is the City of Winnipeg.

The work of the year has been generally very satisfactory. At the close of last year the Commission had a staff of forty-six inspectors, which, owing to the increase of work and territory, has now been augmented by the addition of five more inspectors.

## RURAL POWER

### General

During the past year, owing to the growing scarcity of labor and demand for increased production, the demand for electric power on the farm has become very widespread over the different districts of Ontario, and a number of rural lines have been constructed and are under construction at the present time. Petitions asking for estimates of the cost of service have been prepared and submitted to a large number of townships as detailed in another part of this report.

### New Ontario Land Clearing

Engineering assistance was also given by the Rural Department to the Department of Lands, Forests and Mines in the application of power to land clearing at Monteith and Kapuskasing in Northern Ontario in the Soldiers' settlement.

### Niagara Farms

By reason of acquiring certain areas pertaining to the right-of-way of the Power Canal of the Queenston power development, and of some 607 acres of land in connection with the rights-of-way of the Ontario Power Company, the Commission has created a department which is to manage this land, or that portion of it which is suitable for agricultural purposes as a farm or a series of farms for the Commission. In this way the Commission is endeavoring to do its part in the increase of production.

### Dereham Township

From the Town of Tillsonburg 33.5 miles of 4,000-volt rural line are being built, and service has been given to thirty-one farms, and the Hamlet of Brownsville in one section and is being built to fifty-eight farms, and the Hamlet of Mount Elgin in another section.

### South Dorchester Township

The rural line in Dereham Township out of Tillsonburg through Brownsville was extended 3.75 miles into this township to serve the village of Springfield and six farms along the route.

### Townsend Township

In this township 4.5 miles of 4,000-volt rural line have been completed and connections are being made to ten farms south of Waterford.

### North and South Norwich Townships

A number of extensions to the existing rural lines in this township have been made as follows:—

1. West from Burgessville to Holbrook to serve thirteen farms.
2. From Newark to Springford and along the concession roads east and west from this line to serve thirty-two farms and the Hamlet of Springford.
3. Extension on the Quaker Road approximately 310 feet to serve Deller Bros. brick yard.
4. Extension on the Young farm to serve a municipally operated gravel plant.

5. Extension into the Otterville Branch of the Borden Condensed Milk Company's plant at Otterville, in the township.

An estimate was submitted to North Norwich Township on the cost of a rural line to serve eighteen farms by a proposed extension west on the Quaker Road.

#### Waterloo Township

The line from Preston to Breslau was changed from 13,000 volts to 4,000 volts, and a number of farms are being served along this road. There was also completed an extension on North King Street from Waterloo to serve twelve farms in this district. Two syndicate outfits are now in operation in this district in addition to the one on the St. Agatha Road west from Waterloo.

Petitions were received and an estimate submitted on a proposed extension north from Breslau to New Germany, and also an extension south-west from Waterloo towards New Williamsburg and south from Kitchener towards Freeport and Centreville.

#### Louth Township

From Port Dalhousie an extension has been completed along the Lake Shore Road west a distance of 2.6 miles, to serve twenty-seven residents and fruit farms.

Petitions have been received and estimates have been prepared on a proposed extension west from St. Catharines along the middle road of this township to serve the Hamlet of Vineland, Jordan, Vineland Testing Station and the Police Village of Jordan Station.

#### East Oxford Township

A petition was received and estimates prepared and submitted in connection with a proposed extension south from the City of Woodstock to Curries Corners.

#### Operation of Farmers Syndicates

Uses on *three groups of farms* in Waterloo Township.

A further record of the operation of Syndicate No. 1 is submitted for the year 1917 for the purpose of comparison on the same syndicate as submitted in the 1915 and 1916 reports. In addition there is also submitted a report of the two additional syndicates which were placed in operation this year.

## Waterloo Township Syndicate No. 1

WORK DONE BY 20-H.P. MOTOR, JANUARY 1, 1917 to JANUARY 1, 1918

## No. 1 Farm

Silo filling .....	12' x 42' silo filled, settled and refilled twice.

## ELECTRIC RAILWAY WORK

### General

The work of collecting data and statistics of construction methods, operating revenues and expenses of existing electric railways was continued during the year. A number of lines were inspected and data obtained first hand from officials in charge.

The Chief Engineer, while in the west during the summer, interviewed the presidents and operating officers of some of the more progressive lines in that district, such as the Chicago, Milwaukee & St. Paul, the Spokane and Inland, the Pacific Electric, the Southern Pacific, etc. The officials met were most obliging and furnished details of their revenues and expenses that will be of considerable service to the Commission. The experiences of these companies with special equipment such as high-voltage converting machines, highway crossing-signals, pantagraph-trolleys, etc., are of special interest, as such apparatus is not in use on electric lines in the east, and it is, therefore, difficult to obtain operating experience with them. The class of service given by these western roads is much superior to that found on our existing steam or electric lines, and closely resembles the service on our proposed trunk lines, so their operating rules and methods are particularly instructive.

The Commission collected information on freight business moving into and out of the towns on the proposed lines during the years 1915 and 1916. During the past year this information was carefully sorted, classified and tabulated. It has now been assembled in proper form for use in estimating the probable freight business that can be secured by constructing any of the proposed lines. It is thought that these studies represent the most careful and thorough work of this kind that has ever been attempted in Ontario. It involved considerable expense, but it was thought most advisable to have full and reliable information on this class of business rather than to follow the usual method of practically guessing at the probable revenue.

### Proposed Hamilton—Niagara District Lines

As indicated in the last annual report the ratepayers on the proposed Port Credit-St. Catharines and the Welland-Port Colborne-Bridgeburg lines voted on by-laws on January 1, 1917, to construct these lines. The estimated cost of construction and equipment was placed at \$11,360,363 and \$2,208,716 respectively. Considerable opposition developed in some of the municipalities, especially in Hamilton and St. Catharines. In the former city the three daily papers were against the plan.

Meetings were held throughout the district, the speakers being supplied by the Hydro-Electric Railway Association. Engineers from the staff attended, to supply details of the estimates when requested. It was found that a great deal of the opposition mentioned above was due to a lack of knowledge of the plan, many thinking that the lines were to belong to the Commission after being bonused in the old method by the municipalities. Much of the opposition, however, was from those who were interested in the existing private companies in the district. The result of the voting on the two lines are given herewith—that for the Welland line showing that not a single municipality registered an adverse majority.

Bridgeburg, Town,.....	148	7	141	
Total Vote.....	2,097	392	1,705	.....

The municipalities on various proposed lines in the Niagara District were very much interested in the two lines that were being voted upon and it was decided to indicate just what further lines could be expected to be constructed in the district. A meeting was called at Hamilton in March and general figures of cost, revenue and expenses given to delegates from the municipalities on the following lines:

1. St. Catharines—Niagara Falls.
2. Hamilton—Port Dover.
3. Hamilton—Galt—Kitchener.

The delegates were very optimistic over the outlook for the construction of these lines at the close of the war, but it was felt that final recommendations and estimates should be left in abeyance until that time. The situation in Hamilton, where an adverse vote on the Port Credit-St. Catharines line was given, should also be cleared up first.

### St. Catharines Street Railway

The local street railway is now operated by a private company under a franchise that is renewable every five years unless the property is purchased by the city. One of the five-year terms expires this year, and a deputation consisting of the mayor, some aldermen and city officials called at the office to secure information which would assist them in deciding whether or not the franchise should be renewed. The matter was carefully looked into subsequently by the city officials, and the Commission had some rough estimates prepared showing the probable cost of the property, the annual revenue and expenses if operated by the city. With this data before them, the Mayor and officials decided it would not be advisable to take over the line at this time.

### London and Port Stanley Railway

The Commission assisted the officials of this line at various times during the year, both in connection with new rolling stock, highway crossing signals, and other matters. Four new trail cars and two new motor cars were purchased and equipped to assist in handling the enormous passenger service that is offered the line in the summer months. The two new motor cars that were designed by the Commission are probably the finest equipment to be found on any electric line in America. They are of steel construction throughout, and are provided with main, smoking and baggage compartments. The seats and interior furnishings are the best that can be secured, and are very much commented upon by travellers using the line. These cars are 75 feet in length, and were placed in service during July of this year.

### Whitby

The Military Hospitals Commission has erected a large hospital near the Asylum grounds, about one and one-half miles south of the centre of the Town of Whitby. There is no means of transportation from the hospital to the town or even as far as the Grand Trunk Railway station. It was, therefore, suggested that the Commission should construct that portion of the Toronto-Markham-Whitby Railway, that would provide transportation over the above route. It will be remembered that eleven municipalities voted favourably on by-laws in October, 1914, to provide for the construction of a line from the lake, at Whitby, northward through the town to Port Perry. This line, along with others from Stouffville and Brooklin, would connect with the City of Toronto.

The matter was taken up by the local Board of Trade and the project endorsed by the various manufacturers, the Asylum and military authorities. The Council requested the Commission to prepare a report on the suggested plan.

Engineers visited the municipalities and found that it would be perfectly feasible to construct a suitable line on the main street. This line would connect with the hospital and Asylum grounds, both the Grand Trunk Railway and Canadian Pacific Railway main stations, the three manufacturing plants, as well as running through the centre of the business and residential districts. The various establishments receiving and forwarding freight were called upon, and appeared anxious to assist the project any way that could be suggested to them. They supplied data as to freight moved and charges for same as handled at present.

The information obtained is now being used to prepare the report requested.

### Baysville District

Acting on the resolutions received from municipal councils in this district, the Commission secured engineering and traffic data with which to prepare a report on the feasibility of constructing a line from the Grand Trunk Railway at Gravenhurst, Bracebridge or Huntsville to the Lake of Bays district.

The data obtained indicated that the most favourable location would be from Gravenhurst to Baysville, and in August 1916, a report was sent to the municipalities recommending the construction of a 28.8-mile line. The gross cost of construction and equipment was placed at \$1,461,765, and the estimated annual revenue and expenses at \$198,625 and \$74,916 respectively. Interest of \$63,875 increased the annual charges to a total of \$138,791. The report stated that the figures of timber traffic, as furnished by various lumber companies, were not checked by the Commission's staff, and that this would have to be done before actual construction could be recommended by the Commission.

A meeting of delegates of the municipalities was held on November 22, 1916, at Gravenhurst, and the lumber companies stated that the proposed rates were too high for them to consider. The rates were about 50 per cent. higher than standard mileage rates on trunk lines. It was also found that there had been a misunderstanding in figuring on some of the timber that was available. The lumber companies presented a proposed schedule of rates that would be satisfactory to them and a revised estimate was made and sent to the municipalities in February 1917. This estimate covered the same line, but the revenue was reduced to \$113,750, and the annual charges, including interest, were placed at \$148,004. The municipalities were very much disappointed at the conclusions, and found upon investigating the matter that the lumber companies had suggested rates that were much lower than those charged on steam trunk lines. They then requested a third estimate, which was sent to them in March. This estimate was based on lumber rates equivalent to those charged on steam roads. These figures placed the total annual revenue and charges at \$133,840 and \$127,828 respectively. This third report is now under consideration by the municipalities and lumber companies.

### Proposed Ottawa—Morrisburg Line

The data secured from this district in 1916 by the Commission was used to prepare a report on a line from Morrisburg, through Chesterville to Ottawa. The Commission authorized a report to the municipalities, but further information on revenue was promised by some residents of the district, and it was thought advisable not to forward the report, until this information had been received and studied.

### Ontario West Shore Railway

This line, extending from Goderich to Kincardine, was promoted some years ago and the municipalities induced to bonus the line for \$400,000. A right of way was purchased, some grading and track-laying done, but finally the property was abandoned, and the municipalities are now paying some \$20,000 a year interest on debentures, but have no prospect of ever receiving service over the line. Acting on requests from the municipalities, the Commission examined the line and prepared an estimate of the cost of completing the work and also on the probable operating revenue and expenses of the line if opened for traffic.

Alternative figures were furnished on electric and gasoline cars and the information sent to the municipalities in December 1914. The report was not a favorable one, and it was thought best to endeavor to dispose of the property this year while prices for second-hand railway equipment were unusually high. Before doing so, however, the municipalities asked for a more detailed investigation into the cost of completing the line and placing it in service. A survey was made and exact estimates prepared, which indicated that \$642,000 additional money would have to be put into the property to complete it, and that the annual revenue and charges would be \$58,434 and \$107,070 respectively.

A report with the above figures was sent to the municipalities under date of March 28, 1917. Delegates from the municipalities met to consider the report and decided to advertise the tracks and property for sale to the highest bidder. The greater part of the equipment was subsequently sold to the Commission for use on the Niagara Development Railway.

### **Peterborough Street Railway**

Although there are few if any cities as small as Peterborough that are supplied with as good a street railway system as that furnished by the Commission, still there is a demand for additional tracks in sections of the city that have now no service. The Commission is now engaged in preparing a report on the feasibility of constructing additions to the existing tracks. The presence of so many level street crossings of the steam lines along with the river make it a difficult matter to improve the existing layout.

### **Proposed Minden District Railway**

A deputation from this district called at the office and requested the Commission to prepare a report on the feasibility of constructing and operating a line into Minden Village from Coboconk or Kinmount. The Commission has secured traffic information by calling on the various shippers, and has made a survey of a line from Kinmount Junction to Minden, a distance of about ten miles. A report is now being prepared for submission to the municipalities.

## MUNICIPAL WORK

### Cobden

The local hydro-electric plant installed during 1916 has given entire satisfaction. Considerable increases in lighting and power loads have been effected.

#### Street Lighting

In this municipality was installed the first outdoor pole-type of constant-current transformer, with stationary coils, that has been placed in service in Ontario. This transformer has a capacity of 7.5-k.w., with 2,300-volt primary, and 6.6-ampere secondary circuit. There are 31 lamps of 150 candle-power and 13 lamps of 400 candle-power, all being gas-filled, incandescent series lamps. The system was designed and installed under the supervision of the Commission, and was placed in service on November 25, 1917.

### Gore Bay

In response to a request an engineer visited Gore Bay during the summer of 1917 and collected data in connection with a proposed distribution system for the town. There being no power demand, lighting will be the chief use for electrical energy.

### Haliburton

The Municipality of Dysart has applied to the Commission for engineering assistance in designing and constructing a local hydro-electric plant and distribution system. Estimates are being prepared with a view to going forward with this construction during the coming year.

### Minden

Municipal surveys were made for light and power in this district, in connection with investigations for an electric railway line from Kinmount Junction.

### Monteith

At the request of the Provincial Department of Lands, Forests and Mines, the Hydro-Electric Power Commission made a reconnaissance survey in May 1917, of the power site on the Driftwood River at Monteith, Ontario, with the object of ascertaining whether a supply of power could be developed for the Monteith Soldiers' Training Farm and the Municipality of Monteith.

A wooden dam had already been built at this site for lumbering purposes by the Monteith Pulp and Timber Company, and it was found that a head of fourteen feet would be available for power development. The flow of water was estimated to be sufficient to develop about 75 h.p.

For this small development it was decided to purchase the second-hand turbine and generator offered for sale by the Municipality of Paris, Ontario, and to construct a short timber flume and wheelpit with suitable buildings for housing the machinery. Work was commenced on October 19th and at the date of this report is nearing completion. It is expected that power will be available early in the year 1918.

The Commission during the past year gave assistance to the Ontario Department of Agriculture in the installation of a generating station on the Driftwood River capable of developing 75 h.p., and the construction of a distribution system to supply the Soldiers' settlement and the Sailors' and Soldiers' School at Monteith.

### Parry Sound

Detailed investigations were made on the power possibilities of the Seguin River. A report and sketch of proposed alterations and extensions to the present power plant were forwarded to the town officials. Actual construction of the plant and conservation system has been deferred on account of the high cost of materials and labor.

### Sudbury

Considerable work has been done in connection with a proposed supply of power to the British-American Nickel Company, and it is anticipated that the power agreement will be executed early in the coming year.

### Thessalon

In response to a request an engineer visited Thessalon and investigated the power possibilities of the district, including Blind River and Bruce Mines. An ample supply of power in the vicinity is capable of development, but a market sufficient to warrant hydro-electric development has not yet been secured.

There are prospects of pulp mills locating in this district and this would make power at reasonable rates available to the municipalities adjacent thereto.

## GENERAL ENGINEERING

### Municipal Waterworks

In addition to the activities of the Commission in connection with waterworks as described elsewhere under the headings of the various municipalities concerned, information has been supplied to a number of cities, towns and villages regarding their pumping and water supply requirements. Among these are Exeter, Preston, Listowel, Galt, St. Thomas, Goderich, Paris, Stratford and Woodstock. In most instances these estimates concerned pumping requirements, for either domestic or fire supply; in some, attention was given to sewage pumping, while for the last named city, a valuation of the waterworks plant was made at the request of the municipality.

In a number of cases pumping equipment and water supply for small institutions and farm buildings have received attention. Among these are the farm buildings of Mr. R. J. Graham, Belleville, and the McLaughlin Estate, Whitby.

### Fixation of Nitrogen

The fact that this subject was under investigation was referred to in the 1916 Annual Report and some general notes on the subject were given indicating the great importance now attached to it throughout the civilized world for the manufacture both of artificial fertilizers and of explosives.

Records have been kept during the year of the progress of the industry and various new developments have been noted. This department has now on file a considerable mass of information relating to this subject.

### Utilization of Peat

Data have been collected from various sources relating to the utilization of peat as fuel both for heating and for the generation of power, and a preliminary report has been prepared, from existing records, on the feasibility of erecting in

Canada plants for making producer gas from peat, using it for the generation of electric power, and recovering by-products.

### Preservation of Timber

In connection specially with the preservation of poles and cross arms this subject has been under review for some time; a good deal of information has been assembled and the merits of the various methods in use in different places have been noted. Recently a specification covering the preservative to be used and the methods of application which may be employed has been prepared for the use of the Commission.

### Inspection and Testing

During the year the following work has been done:—

#### 1. Insulators.

The following units have been inspected and delivered for construction and replacement purposes:—

90,000	—	110,000	V. Susp. Type.
3,700	—	44,000	V. Pin “
16,000	—	26,000	V. “ “
20,000	—	13,000	V. “ “
107,800	—	4,000	V. “ “ and Telephone.
5,500	—	strain	“
2,000	—	Misc.	“

Total. .245,000

#### 2. Cable.

(a) Alum. steel reinforced, refabricated.

1,000	lbs.	—	No. 2 S.R.A.C.
75,000	“	—	145,000 c.m. S.R.A.C.
569,572	“	—	6/0 S.R.A.C.
60,000	“	—	not yet refabricated.

Of the above 69,158 lbs. of the aluminum content were bought and 387,165 lbs. taken down from existing lines.

(b) Copper.

40,000	lbs.	—	500,000 c.m.
30,000	“	—	4/0 stranded.
75,000	“	—	2/0 “
227,000	“	—	1/0 “
50,000	“	—	Misc.

(c) Steel wire.

58,000	lbs.	—	No. 14 BWG.
400,000	“	—	No. 13 NBS.
1,055,000	“	—	No. 12 “
407,000	“	—	No. 9 “ (both hard and soft).
355,000	“	—	No. 6 “

Of the above, 230,000 lbs. of No. 12 has been used for aluminum steel reinforced cable core. The balance, along with the No. 12 and No. 13, is being stranded into guy, ground and conductor cable.

375,000 lbs. of No. 9 has been fabricated into guy and conductor cable. The balance is largely in stock.

## TESTING AND RESEARCH LABORATORIES

Mention was made in the preceding Annual Report of the proposed additions to the laboratory space and equipment. These changes are now being accomplished. The space in the original building previously occupied by the stores, machine shop and garage was vacated about September 1st, and the installation of the necessary partitions, electric circuits, equipment, etc., was immediately begun. It is expected that this work will be completed in about four months. Reference will be made below to the principal features of the new installation and the proposed additions to equipment.

In addition to the general work of the laboratories which is described below, reference will here be made to work of a special and research nature. The problem of relay protection has received considerable attention and progress is being made along several lines of investigation which show promise of satisfactory results.

The question of the suitability of iron and steel for electric line conductors is being extensively investigated. These investigations include principally tests on an experimental line erected near the laboratories and will include all commercial sizes and grades of iron and steel wire.

In addition to these laboratory tests, a test was made on a 22,000-volt line, 25 miles long, for which iron wire had been used. The line was short circuited at the load end, the metering equipment was set up in the power house and the 4,000-volt generators connected directly to the line in order to obtain the low voltage necessary to force current through the line. This test furnished a check on the laboratory measurements and gave sufficient data to calculate directly the regulation of the system concerned.

Other subjects of investigation include the study of special cases of trouble arising in connection with the installation or operation of equipment on the system, some of which have necessitated the re-design of, or modification of existing apparatus.

The Commission is co-operating with the University of Toronto in connection with the industrial research programme which has been inaugurated by that institution. A member of the laboratory's staff was appointed to a research fellowship in October. He is making investigations which have a direct bearing on a problem now being studied by the Commission, and is working in co-operation with the laboratories and operating staff.

The increase in the volume and variety of general testing work has been very great during the year and especially during the past six months. It has probably been most marked in connection with the approval of electrical devices and the transfer of used apparatus for the municipalities.

A full description of the activities of the various departments of the laboratories follows:—

### High Tension and General Testing Laboratory

The work of the High Tension and General Testing Laboratory as mentioned in previous reports, has covered a great variety of tests during the year, of which approximately one-half may be described as routine tests for various departments of the Commission or for municipalities served by the Commission. Of the remainder about one-half were approval tests of a great variety of electrical devices and fittings submitted by manufacturers who wished to sell these goods in the Province of Ontario, and the rest are special tests or investigations carried on at the instance of various departments of the Commission.

During the year the volume of work in all lines as just outlined has increased greatly, especially in the matter of approval inspection and testing. It is expected that this will still further increase in the coming year as more manufacturers avail themselves of the use of the laboratories.

To carry on the work, a special devices and fittings testing room is being equipped, in which all such low-voltage appliances may be both electrically, and where necessary, mechanically tested. Since the last report there have passed through the laboratory many types of equipment inclusive of such as cartridge and plug-fuses, knife and oil switches, motor-starters, service-boxes, sockets, rosettes and a great number of heating appliances, consisting of air-heaters, grates, electric logs, grills, toasters, water heaters, etc.

These have all been tested with the view of eliminating to the greatest degree the danger of fire hazard from their use in the homes and offices of the ultimate consumer and also of rendering each device as far as practicable safe to handle by the public.

As mentioned in previous reports the high tension testing laboratory has been of great value to the Commission in the so-called routine tests, that is tests which are a matter of routine work only and require no special investigation to obtain results. Under this head may be included the monthly testing of oil samples from all the high tension transformers and oil switches on the Niagara System, the testing of special samples from new distributing stations or from municipal or industrial consumers of power, of which approximately fifty were made since last report was written.

A considerable portion of time is spent on the examining and testing of used distributing transformers and motors which, as has been noted before, are handled by the Commission as agent for various municipalities. This work has also been considerably augmented recently and upwards of seventy transformers and motors have been handled by the laboratory in the year. Other transformers and instrument transformers have been given high potential or resistance to ground tests, notably one of the 5,000-kv-a., 110,000-volt transformers at Toronto Terminal Station in the latter part of the year. Air-break disconnecting switches manufactured in the Commission's machine shop are also given flashover test before being shipped out for installation on 13,200, 26,000 or 44,000-volt transmission lines. Megger and flashover tests have been applied to various types and sizes of line and station insulators for the purpose of checking field observations or attempting to solve problems met with by the operating department.

The standard specifications for rubber gloves have been adopted in the past year and now all gloves for use on lines or stations of the system or for municipalities when purchased through the Commission are submitted to the laboratories for acceptance test.

It is proposed in the coming year to institute a monthly re-test of all rubber gloves used by the various departments, and to facilitate this a complete record system for keeping the history of each glove has been adopted.

Special investigations and tests have been conducted for a variety of purposes a few of which may be mentioned. An investigation of the conditions tending to produce electrolysis in the cable duct lines feeding the Niagara Transformer Station. The investigation of the failures of choke-coils in some of the low tension stations, efficiency tests of motors and pumps for municipalities, insulation and physical tests on insulating tapes and varnishes, measurements of water resistivity and dielectric strength of various insulating materials were among some of the problems attacked during the year. Some work was also done on the design of some equipment for testing and for charging the high tension transmission lines. Under this heading may also be included the work done by the laboratories on the investigation of the properties of iron and steel wire for transmission purposes and the investigation of the whole matter of relay protection for the Niagara Distributing System. These latter investigations, however, were conducted by special members of the staff outside the personnel of the high tension laboratory.

To the high tension testing equipment that has been in use in the laboratory for some three years now has been added a complete range of spheres in three sizes: three inch, six inch and ten inch. These are mounted in wooden frames according to the standards of the American Institute of Electrical Engineers and provided with control of the gap adjustment. The high tension voltage measurements obtainable with these spheres have a high degree of accuracy. It is proposed and plans have already been drawn to provide a complete low tension testing equipment by which all motors, transformers, heaters and other electrical devices operating on voltages up to 2,200 volts may be completely tested. This equipment will consist of three test panels, each with its necessary oil switch relay and instrument transformers. The first panel will be a three-phase, 2,300-volt, 40-ampere panel, and will be capable of testing three or two-phase, 25-cycle, 2,300-volt motors up to 175 h.p., or 60-cycle, 2,300-volt motors up to 65 h.p., which is the present capacity of the laboratory 60-cycle generator. By this panel also transformers up to 90-kv-a. at 2,300-volts may be tested. Panel number two will be a three-phase, 550-volt, 200-ampere panel and will be capable of testing three or two-phase, 25-cycle, 550-volt motors to 200 h.p., or 60-cycle, 550-volt motors to 65 h.p. It will also be able to test 25-cycle transformers up to 100-kv-a., or in other words any appliance requiring less than 200 amperes and at less than 600 volts. A third panel is being provided for use in all direct current equipment tests up to a rating of 200 amperes, 250 volts. Besides the three stationary test panels mentioned above, a portable panel for use any place in the laboratory is being installed at once which will be capable of testing any single-phase appliance requiring not more than 60 amperes at 250 volts.

In the laboratory extension plans room has been provided for practically trebling the floor space previously occupied by the high tension laboratory. The rooms on the ground floor formerly occupied by the meter and photometric departments will now be used for test rooms and office space by this department. In the basement a work shop and storage room and a receiving floor have been set aside for this department in space previously occupied by the machine shop. With this increased space and equipment, the work of this laboratory will be greatly facilitated.

### Meter and Standards Laboratory

The activities of the Meter and Standards laboratory have embraced a wide variety and a considerable volume of both research and routine work. Solutions have been found for many of the problems which continually arise in electrical measurement. New types of apparatus have made their appearance and have been examined as to their adaptability to the purpose for which they are intended. And, in the meantime, efforts have been made to fulfil the requirements of the every day routines of metering.

With the new laboratory standard instruments it has become possible to make checks on the accuracy of portable apparatus with reasonable speed and precision, so that periodic tests may now be made on the various portable meters employed in the laboratory work. Equipment belonging to other departments also is calibrated, and instruments are sent in by the municipalities for checks on accuracy as well as for repairs. In the new extension of the laboratory there has been provided a special room where the standard instruments, permanently set up, away from all disturbing influences may at any time be used without fear of interference with other work.

In the course of the year a number of new meters, particularly for the measurement of demand, have been placed on the market and upon these some extensive tests have been made. In this connection there has also been run a detailed investigation into the theory of demand measurement with particular reference to the comparative value of the arithmetical average and what is known as the logarithmic average as basis for the computation of demand. The former quantity is what has been aimed at in most meters of the electro-mechanical type; but owing to the fact that, unfortunately, there has not yet appeared any instrument to measure it with absolute definiteness, there has been a tendency to discount the arithmetical average in favour of the logarithmic. The latter quantity has the merit that the logarithmic law governs the heating of apparatus; and, as meters whose indications follow this law can be produced it is possible to obtain a check on the limiting factors of the load. On the other hand there has been raised to this method of metering, the objection that an intelligent comprehension of the true significance of the values obtained, demands a knowledge of some rather intricate mathematical relationships; whereas the meaning of arithmetical average is very easily understood.

Considerable oscillographic work has been done during the year. This includes a detailed investigation into the operating characteristics of electrolytic lightning arresters on systems where no transformers are interposed between the line wires and the generator winding.

Oscillographic records have also been obtained of electrical quantities concerned with pieces of apparatus undergoing repair and alterations. Among these may be mentioned telephones, meggers and automobile magnetos.

A large number of measurements on the resistance of various kinds of wire for telephone lines have been made, and samples of metal submitted for bus and cable clamps have been tested for conductivity. To facilitate this work a Kelvin double bridge is being procured.

The watt-hour meter department has handled a large volume and great variety of work in the year. Much study and research has been devoted to the development of a system of meter inspection. It is felt that present methods are not keeping pace with the rapid strides in the art of metering, and there are many points where improvements over the system now in use may well be made. This is

particularly true of curve-drawing and demand meters. A full report on this matter has been prepared and submitted to the meter committee of the Commission.

The system of rebuilding old meters has found favour among the owners and users of that class of apparatus, and the demand for second-hand instruments continually exceeds the supply. During the year almost 1,500 meters of various makes, types and sizes have been passed through in this way, and large shipments are in sight for the coming year. As there are now in stock in the Commission's store-house large numbers of new meters, there has become necessary a certain amount of supervision of the quality of the goods. These meters were bought on the results of acceptance tests made by the laboratory. Occasional visits are made by members of the staff to the factory where they are built, and it is thus possible to keep a certain check on the workmanship and material entering into their construction. Occasional complaints from customers, about unsatisfactory operation of meters, have been investigated, the responsibility properly assigned, and the trouble rectified where necessary. The facilities of the Laboratory are at the disposal of the Dominion Government inspectors for the testing and sealing of meters for use in the Toronto inspection district. Besides a large percentage of the repaired meters, above referred to, there have passed through the laboratory for inspection, in the year, over five hundred new meters.

In addition to the classes of work dealt with in the foregoing paragraphs, and a large number of minor tasks such as the repairing of meggers, indicating and graphic meters, relays and time switches, there has been done under the direction of this department a great volume of the engineering work connected with the new laboratory extensions. This has included the location of testing rooms and storage space, the layout of power, lighting and testing circuits, and the design of test benches and tables for a variety of special requirements.

### Lamp Laboratory

The condition of the incandescent lamp market during the past year has been very unsettled, due to the enormous demand on American lamp factories and the difficulty of securing shipments of European lamps. Japanese lamps have appeared on the Canadian market and several of other makes heretofore unknown generally are being found. The efforts of the purchasing department of the Commission and some lamp distributing companies to keep posted on the quality of the lamps appearing on the market have resulted in an increased use of the lamp laboratory. The test racks have been used to full capacity, and in order to handle the increase of work temporary circuits were added. The routine testing of stock lamps has been carried on as usual. Particular efforts are being made to prevent the shipment of all gas-filled lamps that are liable to give unsatisfactory service. Our methods of detecting defects are such that complaints are very few. A portable testing table is under consideration that will facilitate the testing of all gas-filled lamps so that the Commission will be reasonably sure that every lamp is in satisfactory condition before shipment.

On account of the rapid development of series lamps since the installation of our life test equipment our present equipment has become entirely inadequate, and it became necessary, both to enlarge the racks and to provide a more suitable means of supplying current to them. For the latter purpose a constant-current transformer has been ordered. With the original equipment only a very limited number of different sizes and current ratings could be placed on the racks at one time. The controls for the constant-current transformer are arranged so that the entire

capacity may be taken up by lamps of one current rating regardless of size or the individual currents may be separated or grouped and supplied with different current value as may be required. This arrangement provides great flexibility and it is expected to fulfil any requirement for series lamp testing that may arise.

The lamp laboratory has been hampered for some time by insufficient space in which to carry on the work. New quarters on the top floor have been allotted, which provide more room and easy access to the lamp stock which is on the same floor. In the re-installation of the test apparatus in the new location provision is made for future extensions without in any way interfering with the present equipment.

New electrical metering equipment has been acquired by the department that enables much greater accuracy to be attained.

A change has been made in the rating of the Commission's series lamps. The old rating was in terms of candle power. The new lamps are rated according to their watts consumption. This has been done because candle power as applied to the gas-filled series lamps has no real significance and is not a measure of the light output of the lamps. Under the watts rating the number of lamps that may be supplied by one transformer is determined without any reference to lamp efficiency. This plan is working out satisfactorily. The two ratings are here compared:—

Old Candlepower Rating.	Equivalent Watts Rating.
100	80
150	100
500	250
750	500
1,000	750

Tests of series amps., made according to the new specifications, indicate that the 4,000-hour lamps will give satisfactory service.

### Illumination Laboratory

The illumination laboratory has, as in former years, made tests of illuminating devices and materials as required by various departments of the Commission as well as by some outside parties.

The ordinary distribution tests of reflectors and globes have formed the bulk of the work. Tests were made of the total transmission of light of some samples of different types of window glass. Considerable difference was found among different kinds and the results indicate that this feature is worthy of consideration in the planning of day lighting of buildings. A thorough investigation of automobile head lamp glasses was made to determine the characteristics of the beams of light from them. The principal features under test were the distribution of light in the beam and the road illumination resulting from such. The results of the former, when plotted as curves, showed the direction of maximum intensity angular spread and the relative amounts of glare resulting from the different types of glasses. For this purpose a standard automobile head lamp was set up so that different angular positions from the horizontal axis could be made in vertical and horizontal planes. The measurements were made with an illumination photometer at a distance of 30 feet. Measurements of road illumination were made at 10-foot intervals from 10 feet to 100 feet from the headlight. The types of glasses tested included prismatic and diffusing. It was found that the two types are very widely different in their characteristics.

An Automobile Headlight set up for Test

A View of the Photometer Room, Lamp Laboratory. An 84-inch Spherical Photometer is Shown at the Right.

### Structural Materials Laboratory

Though but a little over a year old this department is already one of the largest in the laboratories. Its work has grown both in volume and in diversity and now includes the chemical as well as the purely physical testing of the materials used in engineering. It has, therefore, been necessary to devote additional space, install a more complete and varied equipment, and add to the staff to take care of these increased demands.

The department now occupies approximately 2,500 square feet of floor space, of which 750 square feet is devoted to housing the testing machines and other large apparatus, 350 square feet is set apart for a cement and sand laboratory, the same amount for a chemical laboratory, 800 square feet is used as a concrete laboratory and the rest as a moist room and for miscellaneous storage. The whole is amply supplied with cupboards, tables, benches and other miscellaneous equipment, so arranged as to facilitate the work being carried out.

As was noted in the last annual report, complete equipment for the testing of concrete and its constituent materials was then on order or contemplated and most of this is now installed. Some of the principal items included are: An Olsen hydraulic compression machine of 200,000 pounds capacity, a complete set of both sand and stone sieves, having a combined range of from 0.0029 inches up to 3.00 inches, a Howard and Morse power-driven mechanical sieve shaker of a capacity to handle both the sand and stone sieves just noted, and a score or more of each of 2-inch, 6-inch and 8-inch cylindrical moulds for casting mortar and concrete test pieces.

Further additions have been made to our cement testing equipment giving us a capacity of ten complete tests per day. To do this has required a large number of additional moulds, increased storage facilities, another cement-testing machine and a quantity of miscellaneous equipment of various kinds.

A start has been made toward equipping a chemical laboratory. A very fine analytical balance has been purchased and there is now on order the necessary equipment and chemicals to enable qualitative and quantitative tests to be made on metals, cements and other inorganic compounds. Besides this, we are now installing equipment for the testing of gasolines and motor fuels, and have under consideration the purchase of that necessary for the testing of transformer and lubricating oils.

Although there have been many other additions to the equipment of this department only one more will be mentioned, a 2-inch Berry strain gauge for determinations on the elastic properties of metals. This instrument is of the latest and most accurate type, so arranged as to give readings which are the average of two determinations on opposite sides of the specimen. It is capable of the very finest work and can be used to detect a change in length in the bar under test of as little as .00002 inches.

By far the greater part of the work of this department comprises tests and investigations on concrete and its constituent materials. During the year just past fourteen sand and gravel pits have been investigated. Such an investigation comprises a field examination of the pit and extensive laboratory tests upon representative samples of the deposit. In addition to this some sixty samples of sand and gravel have been received and tested. Further, all cement used in any of the Commission's work is regularly tested, and this work alone runs into a large number of tests in a season's time.

This is not the only work, however, being done on concrete and its constituent materials. A very extensive study is now under way in connection with the Niagara Power Development. Materials from the sources to be used on this work are being proportioned in various ways to determine the most economical mix which will give the desired strength and watertightness; also, what changes in these proportions will be necessary to take care of the inevitable changes in the character of the natural materials. In this same connection studies are being carried out with a view to classifying concrete not by the ratio of its different constituent materials, but by the minimum compressive strengths obtained at set ages. This will involve preliminary tests on the materials prior and during construction, and check tests on the concrete as made on the job. Besides this, much work, preliminary to these studies, has been necessary to standardize test procedure and apparatus before much of the above could be begun. This work has now been nearly completed.

As was noted at the beginning, this department's activities have broadened and work is being done in lines other than the testing of cement, concrete and the various metals. Previously some attempts had been made to test paint but with indifferent success. During the year this work has been placed on a more rational basis: system has been put into the method of handling paint inquiries; a card index has been kept covering all available information on the paints submitted to us for test; exposure tests have been standardized and steps are now under way to make it possible to check up by chemical means purchases of these paints with the samples previously submitted for our examination.

The testing of gasoline has been instituted. The Commission is a large consumer of gasoline, and in view of this and the present unsatisfactory state of the gasoline industry, it has been deemed desirable to place some check upon the quality of our purchases. Initial studies of methods for carrying out this work have been made and the necessary special apparatus ordered. It is expected that this will be in place and that this work will be actively under way early in the coming year.

Besides those mentioned many other kinds of tests were carried out during the year. These include chemical analyses on various materials, mechanical tests on insulators, physical tests on transformer oils, galvanizing tests on wire and line hardware, tension tests on steel and other metals and miscellaneous studies on the necessary equipment for certain proposed new lines of work. This miscellaneous work is rapidly on the increase and will continue to increase as the fact that the laboratory has facilities at hand to carry it out successfully, is more fully realized.

## GENERAL CONSTRUCTION

### General

The work on station construction during the past fiscal year has been carried on under increasing difficulties in securing material and labor. Deliveries have become slower and manufacturers' promises in many cases have not been met, owing to the raw material situation consequent upon war conditions. In order to keep a check on the manufacturing conditions, inspectors were sent by the Commission at frequent intervals to the factories of the contractors, and every effort was used to hasten deliveries. Prices on all material and apparatus have increased considerably over the prices in effect the previous year.

### Administration Building

Owing to the necessity for increased accommodation for the staff at the Administration Building, it became necessary to fit out for offices a dwelling at 55 Murray street, which is situated at the rear of the Administration Building. This was done and the building was occupied as an office in August.

As this increased accommodation was not found to be sufficient, the dwelling at 59 Murray street was purchased by the Commission. This, also, is being altered for office use and will be occupied early in November.

The dining-room for the staff and the electric kitchen in the basement of the Administration Building were completed and placed in service in March.

### Service Building

The work on the extension to Toronto Storehouse on Strachan avenue, referred to in the last Report, was carried on throughout the winter by Messrs. Witchall and Sons, the contractors, and the building was completed early in the summer. Following this, the work necessary for remodelling the original building for the Laboratory extension was completed.

The name of this building was changed from the Toronto Storehouse to the Service Building. A Bell telephone private branch exchange was installed in August, which, in conjunction with the extension of the automatic telephone system in this building, affords ample telephone service.

The Service Building, including the extension, is now 132 feet long by 112 feet 5½ inches wide, and is 49 feet 4 inches high from the basement floor to the top of the parapet.

The extension provides for a garage at grade level, 66 feet wide and 112 feet 6 inches long, a machine-shop of same dimensions immediately over the garage. The addition will also give increased storage space. Two elevators were installed, one with platform 20 feet 6 inches long by 8 feet wide, to run from the garage floor to the third floor level. The other elevator is in the storage section. This has a platform 10 feet by 7 feet and runs from the basement floor to the third floor level. Shipping and receiving platforms were erected at the sides of the building for convenience in handling shipments. The construction of a railway siding to this building is under consideration.

**British Forgings, Limited (Imperial Ministry of Munitions)**

At the request of the Imperial Ministry of Munitions, the services of the Commission were used in the design, purchase and installation of the electrical equipment and distribution system required for the electric steel furnace plant of British Forgings, Limited, Ashbridges Bay, Toronto. Owing to restrictions by the Imperial Ministry of Munitions, no details of the equipment installed may be published.

Instructions to handle this work with all possible speed were first received on January 8, 1917. Plans were immediately prepared and materials purchased as speedily as possible. Frequent visits were made by the Commission's inspectors to the plants of the electrical manufacturers. Many parts were made in the Commission's own machine shop, in order to get quick delivery.

The actual installation work of the electrical equipment was started on April 25, 1917. All work was finally completed by the end of October.

The Service Building, Strachan Avenue, Toronto.

NOTE—The above table does not include the transformers purchased for British Forgings, Limited (Imperial Ministry of Munitions).

## STREET LIGHTING

### General

During the past year few ornamental systems have been constructed and work has been concentrated on the installation of the ordinary types of units, both in extensions of existing systems in some municipalities and in the replacement of obsolete equipment in others.

The general standard of street lighting in the Province is rapidly reaching a satisfactory condition in comparison with other districts. This is due to the extensive use of modern equipment and methods of construction, as well as to the liberal amount of illumination provided for the streets. The safety and convenience thus afforded and the improved appearance of the streets by day and by night constitutes one of the greatest benefits derived from the Hydro System. Considering the low cost at which it is supplied the return in service to the public compares favorably with that of any other form of public utility.

It is to be expected that improvement of lighting in the cities and more thickly populated districts will lead to a demand for similar service in a lesser degree along the travelled highways through the rural districts. Careful study will be required to ensure that such service may be provided at a minimum and reasonable cost. There is every reason to believe, however, that with the advance in the art the installation of these systems will become general.

Engineering advice regarding the purchase of new equipment or the operation of the street lighting systems was furnished for the following municipalities:—

Blenheim, Bloomfield, Chatham, Galt, Guelph, Gravenhurst, Kingston, Markdale, North Bay, Norwich, Peterboro, Petrolia, Perth, Pickering, Port Arthur, Renfrew, Ridgetown, Simcoe, Stratford, St. Catharines, Watford, Wellington, and Windsor.

Other street lighting advice and engineering work may be found detailed in Section IV. under the heading "Construction Work of the Commission."

Outdoor Type Distributing Station (44,000/2,400 volts) at Omamee.

A Constant Current Transformer (outdoor type) for the Series Street Lighting System at Omamee.

Corner Queen & John Sts.,  
Toronto.

*To His Honour, COLONEL SIR JOHN HENDRIE, K.C.M.G., C.V.O.,*

*Lieutenant-Governor of Ontario.*

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present to Your Honour the second volume of the Tenth Annual Report of the Hydro-Electric Power Commission of Ontario for the fiscal year ending October 31st, 1917.

Respectfully submitted,

ADAM BECK,

*Chairman.*

TORONTO, ONT., March 1st, 1918.

COLONEL SIR ADAM BECK, K.B., LL.D.,

*Chairman, Hydro-Electric Power Commission,*

*Toronto, Ont.*

SIR,—I have the honour to transmit herewith the second volume of the Tenth Annual Report of the Hydro-Electric Power Commission of Ontario for the fiscal year ending October 31st, 1917.

I have the honour to be,

Sir,

Your obedient servant,

W. W. POPE,

*Secretary.*

# HYDRO-ELECTRIC POWER COMMISSION OF ONTARIO

# OPERATION OF THE SYSTEMS

## NIAGARA SYSTEM

Continued expansion characterized the operation of the Niagara System for the year 1917.

The increasing power requirements of the existing war munitions industries, and the addition of others, together with the normal yearly growth of the municipalities' demands, severely taxed the available generator capacity at Niagara Falls. However, up to the end of October, the Commission was enabled to meet its obligations, with a few exceptions.

On November 7th, the Commission's source of power supply was augmented by arrangements with the Canadian-Niagara Power Company, whereby the output of one 10,000 h.p. generator was paralleled with two generators already in operation on the Niagara Transformer Station bus. On December 17th, a fourth generator of the same capacity was added, and on July 4th, by a regrouping of the generators at the company's plant which supply power to the Commission, one more unit was placed at the Commission's disposal, making in all 50,000 horsepower.

While the power supplied from this company was at times reduced on account of generator failures and ice trouble, the service was quite satisfactory under normal operating conditions.

On August 1st, the operation of the generating plant, transformer stations, transmission lines and sub-stations of the Ontario Power Company was placed under the supervision of the Commission, in the interests of the Ontario Power Company, and while to date no radical change has been made in the method of operation, the resulting combination promises innumerable advantages with regard to improved service and increased economy in operation and maintenance. Several changes in the physical arrangement of the plant are well under way. One purpose of these changes is to permit of direct voltage regulation from the generating station, which will fulfill a long felt want. These changes will also increase the facilities for sectionalizing trouble.

The Niagara System was visited with electrical storms on sixty-three different days during the summer. On thirteen occasions, storms were reported over practically the entire system, of which seven were severe and the balance mostly moderate. Particularly violent disturbances were reported from Niagara Falls, while very severe concentrations occurred in St. Mary's, London, St. Thomas and Chatham districts. Only one total system high-tension interruption occurred, which could be directly attributed to lightning discharges.

The performance of the transmission high-tension lines was particularly gratifying during the past year. The line conductors required little or no attention, and inspections made from time to time confirmed the belief that the cable now in operation should not be the subject of concern relative to the reliability of the service. No failures of high-tension line insulators occurred during the year, and the results of the periodic megger tests of the dielectric strength of the units shews little or no deterioration in the strings erected during the last four years.

Some very interesting comparative figures from an engineering standpoint have been obtained from the tests of the various makes of insulators erected.

As the abnormal condition of the metal market rendered the purchase of line conductors for the new tower line between Dundas and Toronto injudicious for the present, and as an unusually large increase in the load supplied to Toronto munition plants and to the Imperial Ministry of Munitions and to other plants in the vicinity of New Toronto was anticipated, the Commission decided that for the welfare of the service the cross-section of the conductor forming the two No. 3/0 aluminum circuits on the old tower line should be increased. Accordingly, preparations were made to take down the old cable for re-fabrication at the factory, and the erection of No. 6/0 steel reinforced aluminum. A considerable portion of the extra aluminum required was obtained from scrap on hand, and some by replacing the aluminum conductor on other lines with iron wire, where the conductivity of those lines was considered greater than necessary for the present. On account of the high price of aluminum, the transfer proved decidedly economical, without any impairment of the service.

The restringing of the old tower line was commenced on May 20th and was practically completed in the month of October. The cost of the work indicates that financially it was very advantageously undertaken.

While the restringing of the section was being proceeded with, the operating features of this line were improved by the erection of a wooden structure at the Cooksville high-tension station. On this structure are mounted disconnecting switches, by means of which one circuit may now be switched to the other, or either line opened for sectionalizing purposes; also permitting the Cooksville high-tension station to be fed directly from either of the high-tension lines at this point. Other construction work completed by the line maintenance gangs outside of their regular duties follow.

The four telephone circuits on the wood pole line paralleling the old tower line between Niagara Falls and Dundas to a point just north of the Welland Canal to Niagara Falls, were transferred to the wood pole line which parallels the new tower line.

The No. 3/0 aluminum cable on the high-tension section between Kitchener and Stratford high-tension stations was replaced in the spring with 7 strand No. 9 steel cable. This change was proceeded with after a rather extensive investigation of the properties of the steel cable for the transmission of electrical energy. The mechanical performance of the new conductor was very satisfactory.

The 13,200 volt feeder between the Guelph high-tension station and the Fergus and Elora taps was double circuited by the erection of a circuit of No. 3/0 aluminum cable. An air-break switch and structure was erected at the corner of York road and Victoria streets in the municipality of Guelph, for the purpose of forming a break-down connection between the Guelph 13,200-volt system and the Fergus and Elora tap line, for emergency use.

The Commission purchased and took over the Interurban Power Company, and the Erindale Power Company's properties on January 11th, and proceeded to change the method of feeding the former customers of these companies to a more economical basis. The 13,200-volt No. 0 copper circuit, between the Interurban Company's Mavety street station in Toronto Junction, and the Ontario National Brick Company's plant, was removed and placed in stock. The No. 0 aluminum cable between the Mavety street station and the Erindale powerhouse was also

removed, and the aluminum cable used for the restringing of high-tension Section B. The brick company was temporarily fed from the Cooksville high-tension station on February 11th, from a connection to the feeder supplying the Mimico and Port Credit distributing stations, and later on, from a new circuit running north from the Cooksville high-tension station and then west on Dundas street to the company's yards. The customers of the Interurban Power Company of Etobicoke Township, formerly fed from the company's sub-station in New Toronto, were finally supplied with power from the Niagara System on July 31st.

A three-phase circuit of No. 0 aluminum was strung from the switching structure No. 290, at the Village of Beachville, to the new distribution station erected a little to the west of the village. The No. 1/0 aluminum circuit between Beachville and Embro was replaced with  $\frac{1}{4}$ -inch stranded steel conductor. By reason of the high market value of aluminum, the capital cost of this section was decreased by over twice the cost of the new conductor, plus erection.

The No. 3/0 aluminum conductor on the 4,000-volt circuit between the villages of Tilbury and Comber was replaced with  $\frac{5}{16}$ -inch steel cable. In this case, the original capital expenditure was reduced nearly three times the cost of the steel conductor, plus erection.

The 13,000-volt circuits of the Baden distributing station were rearranged, and two air break disconnecting switches erected to accommodate the new feeder to the Village of Wellesley.

Extensions made to several of the high-tension and smaller distributing stations relieved the somewhat overloaded condition of the latter part of 1916, which permitted the station maintenance department to internally inspect and thoroughly overhaul the electrical and mechanical apparatus to provide against the anticipated increase in load during the coming winter. Failures of the station equipment were quite insignificant, and no difficulty was experienced in effecting repairs. As in the past years, several transfers of equipment from one station to another were carried out, where unexpected power demands developed.

The meter inspection department designed and erected pole-type, out-door metering equipment to measure the power supplied to the villages of Springfield and Burgessville, Zurich, Dashwood and Otterville, and indoor equipment at the Tillsonburg and Norwich municipal stations, to obtain a graphic record of the load of the rural customers from these stations. During the year a large amount of work was accomplished in connection with the tests and adjustments of meters and protective equipment in operation on the local distribution systems.

During the summer an engineer of this department made a thorough investigation of the methods of power measurement and service protecting devices, employed by some of the largest electrical corporations in the United States under actual working conditions. Where comparison is possible, it was found that the methods in use on the Commission systems are not excelled.

The tables given below shew the load demand of the various municipalities, as well as the increase during the year. The plotted curve on another page shows the monthly peak load taken by the Commission from the supply sources, from October, 1910, to October, 1917. If no shortage of generating capacity had occurred at Niagara Falls, the gradient of increase for the past year would have been very much greater.

## Niagara System

Capital Investment of the Niagara System in operation at October 31, 1917:

Right-of-Way.....	\$1,115,779 81
Steel Tower Transmission Lines .....	3,317,432 39
Telephone Lines .....	129,706 69
Relay System Lines .....	54,537 32
Wood Pole Lines .....	2,077,156 36
Transformer Stations, including conduit system (Ontario Power Co. to Niagara Station) .....	3,286,967 30
Distributing Stations .....	267,547 07
Total Operating Capital .....	\$10,249,126 94

Total Expenditures in connection with the Operation and Maintenance of Niagara System for the fiscal year 1916-17:

Operators' Salaries and Expenses, including supplies .....	\$105,955 64
Maintenance of Steel Tower Lines .....	81,241 81
"    Telephone and Relay Lines .....	9,549 12
"    Low Tension Lines .....	55,074 17
"    Transformer Stations .....	73,533 60
"    Distributing Stations .....	23,135 77
Administration.....	58,922 02
	\$407,412 13
Interest on Invested Capital .....	\$432,540 73
Cost of Power at Niagara Falls .....	1,310,713 95
	\$1,743,254 68

Summary of Financial Statement of the Niagara System Operation for the fiscal year 1916-17:

## Receipts

Power delivered, including charges for Administration, General Expense, Operation, Maintenance and Interest .....	\$2,637,606 31
---	----------------

## Disbursements

Power purchased, including losses in Transmission and Transformation, Administration, General Expense, Operation, Maintenance and Interest .....	2,150,666 81
Surplus applicable to Sinking Fund and Depreciation Reserve Account .....	\$486,939 50

## SEVERN SYSTEM

The power demand of the municipalities served from the Severn System increased 53 per cent. over that supplied during the year 1916. Parallel operation of the generating stations at the Big Chute, Eugenia and Wasdell's Falls enabled the Commission to meet the increased demand and to provide first-class service with regard to character and continuity.

No serious failures of equipment occurred in the generating station or transformer stations from lightning discharges or other causes. The transmission lines were carefully gone over during the summer and the spans sags adjusted, poles straightened and backfilled where necessary.

Negotiations were completed for the purchase from the Orillia Water and Light Commission of the seven and one-half miles of 22,000-volt single, three-phase circuit of No. 2 aluminum conductor extending from the Big Chute plant to a point approximately south of the Orillia Commission's new hydraulic power house, at Swift Rapids. From this point a circuit of No. 3/0 aluminum cable will be erected to the Swift Rapids plant, a distance of five-eighths of a mile. This tap will form the permanent connection between the Big Chute and Swift Rapids plants, thereby completing the link between the Severn and the Wasdell's System by the use of the Orillia Commission's lines as per arrangements by contract.

To facilitate operation and maintenance the switching structure at the point where the Victoria Harbor tap line branches from the trunk lines was remodelled and the single pole disconnecting switches were replaced with two-pole switches in order that the Victoria Harbor tap might be switched to either of the trunk lines at the junction point.

Another improvement of this nature was effected by the erection of two horn-gap, air-break switches in the two main 22,000-volt lines near the Village of Elm-vale for sectionalizing purposes. Two three-phase disconnecting switches were erected on the System switching structure at Waubauskene, so that the local distributing station could be served from either of the main lines at this point. A three-phase, air-break line disconnecting switch was erected on a pole structure outside of the Victoria Harbor sub-station to act as an incoming line switch at this station.

The extra right-of-way purchased along the transmission line between the Port McNicoll Junction and the Canadian Pacific Railway elevator was cleared of trees.

Switching and transformer equipment was installed at the Big Chute power house, and a small 2,200-volt distribution system was erected to supply the Department of Railways and Canals with power and light for the marine railway installed at the Big Chute plant. This system was put into commercial operation about the middle of October, 1917.

In the latter part of August the service from the original Midland station was discontinued, and resumed from the new distributing station erected adjacent to the municipality's waterworks station.

The two pole line entrance structure at the Collingwood distribution station was remodelled so as to accommodate double circuit lines from the Severn and single circuit lines from the Eugenia Systems, and also the outgoing 2,200-volt distributing circuits.

Surplus applicable to Sinking Fund and Depreciation Reserve Account .....	\$50,469 55

EUGENIA SYSTEM

The second year's operation of the Eugenia System was successfully concluded on November 18, 1917, with very bright prospects for the future. The quality of service supplied was exceptionally good, the operating characteristics of the equipment in the generating and transformer stations meeting the manufacturer's guarantees very satisfactorily.

The Eugenia generating station continued to assist the Big Chute plant to supply the increased demand of the municipalities of the Severn System with any surplus capacity not required by the municipalities of the Eugenia System. The average credit in horsepower to the Eugenia System in this respect was 1,635.

The Grand Valley distributing station was made alive December 1st. This station is fed over a 22,000-volt No. 6 copper circuit from a tap off the feeder to Orangeville at Laurel Junction. The villages of Grand Valley and Arthur are served from this station with 4,000-volt power. The new distributing stations at Orangeville and Shelburne were placed in operation on February 11th and November 26th respectively. Service was formerly supplied to these customers from the old sub-stations taken over with the Pine River System.

The comparatively new transmission lines of this system were gone over carefully and the span sags adjusted and the poles backfilled and tree trimming done by the line maintenance department where necessary.

The out-going 22,000-volt lines on the pole structure at the power house were removed to conform with some alterations which were made in the high-tension equipment of the station to properly control the tie line from the Eugenia to the Severn System. To benefit operation and maintenance of the south and west portions of the system the telephone line between the power house and the Village of Flesherton was double circuited by the erection of another circuit of No. 9 iron wire. This allows for a separate telephone circuit for the south and the west parts of the system.

Flashboards were installed on the dam to give additional storage and a motor boat was purchased for maintenance use on the storage basin. Plans have been prepared for a suitable barn to be erected near the power house to properly accommodate the transportation equipment in use at this point. Considerable lumber on the Commission's property is available for this work. A water supply was provided for the operators' cottages by piping to a boxed spring on the escarpment. The approach to the power house from the south was refilled and put in good condition.

WASDELL'S SYSTEM

The operation of the Wasdell's Station during the past year was attended with good results. The increase of the municipalities' load, while not large, compared very favorably with that of corporations of the same population on the other systems.

The surplus capacity of the generating station was constantly required on the Severn System. Reports show that the system is in excellent operating condition, with no indication of excessive depreciation.

At the power house an addition was made to the switchboard to provide metering and protective equipment on the tie line between the power house and the Severn System. Several minor improvements were carried out by the operators at the power house, such as painting the floors, iron work, etc. A telephone booth

was erected and the telephone equipment installed to conform with the standard employed on the other systems. A three-phase horn-gap air-break, 22,000-volt disconnecting switch was erected in the Beaverton tap, near the junction, for sectionalizing purposes.

A small barn was erected at the power house to house the transportation equipment; also a small building to serve as a machine shop for maintenance repairs. Further storage space for stock was obtained by laying a floor over a part of the gate house.

CENTRAL ONTARIO SYSTEM

During the past year the load on the Central Ontario System has steadily increased until in October it reached the highest peak in the history of its operation.

Extremely favourable river flow continued on the Trent River, enabling all loads to be carried without difficulty. Practically no serious interruptions occurred during the year. Probably the worst interruption was on April 6th, which was due to a snow and sleet storm, which so heavily loaded the wires that a large number of breaks were made, and service was disorganized to all towns at any distance from the generating plants.

Fortunately this trouble occurred on Good Friday, so that factories depending on the Commission's service did not suffer to any great extent.

A number of extensions have been made in the Commission's plants at various places, more particularly in the nature of refinement and improvements to the system, to enable the increasing difficulties of operation under war conditions, to be met.

MUSKOKA SYSTEM

During the second year's operation of the Muskoka System, the Commission was able to improve the service supplied its customers very materially by further improvements of the equipment in the generating station.

It was deemed advisable to completely re-wind the armature of the old 450-K.V.A. generator formerly in operation at the power house. A gate house was erected and repairs and alterations were made to the gate and stop log operating mechanism. The necessary transformers, heaters and wire were purchased and installed for the purpose of heating the gate house.

The section of the 6,600-volt line to Gravenhurst between the power house and limits of Muskoka Falls village was remodelled and a lighting system, for the power house roadway, pipe lines and dam was erected on the poles of this feeder from the power house to the gate house. This work also included alterations to the distribution system for the village.

Two sets of line disconnecting switches were installed at Bracebridge and Utterson in the 22,000-volt line from the power house to Huntsville, for sectionalizing purposes. The line maintenance gang did considerable tree trimming and made all necessary line adjustments.

## ST. LAWRENCE SYSTEM

The operation of the St. Lawrence System was attended with very satisfactory progress. The municipal power demands show material increases. Parallel operation of the Municipal steam plant at Brockville with the M. F. Beach Company's hydraulic plant at Iroquois was continued throughout the year with good results. The Commission has proceeded with arrangements for the supply of a sufficient quantity of power to meet the requirements of the system for some years to come.

The transformer stations and the transmission lines required no special maintenance during the year. One of the Pittsburgh Company's 26,400-volt, 250-K.V.A. transformers which was taken over from the New York and Ontario Power Company in a damaged condition, when the sub-station at Iroquois was purchased, was rebuilt and placed in operation.

### OTTAWA SYSTEM

The total load taken by the Hydro-Electric System of Ottawa for the past year shows an increase of 607 horse-power over that of the year 1916, and very satisfactory progress is reported. The power supplied by the Ottawa and Hull Power and Manufacturing Company was of unusual merit with regard to operating features.

The power supplied to the municipality under the temporary contract, since June, 1916, for the operation of the Queen street pumping station will be discontinued very shortly, when the new pumping station at Lemieux Island is placed in service. This station is now ready for test and will be put into regular operation in the middle of November and will require approximately 1,700 horse-power. The new pumping station is fed direct from the power company's generating station *via* submarine cable at 11,000 volts.

In order to supply the additional power required by the waterworks department, the Commission has placed an order with the Power Company under the original contract, for three blocks of 500 horse-power each, making a total on order of 6,500 horse-power. The Power Company has accepted the Commission's order and has agreed to the cancellation of the temporary contract for the Queen street pumping station power supply, this contract to automatically expire on the date that the Lemieux Island plant is placed in regular operation.

The Commission has completed arrangements for the installation of the necessary metering equipment at the Power Company's generating station to provide totalizing graphic records of the power delivered to the municipal electric department and to the new waterworks station and also to provide a separate record of the load taken by the latter station.

## PORT ARTHUR SYSTEM

The past year's operation of the Port Arthur System was very satisfactory. The recovery of industrial undertakings and business expansion has shown a marked effect on the power demand, with the result that the Commission will find it necessary to provide several additional blocks of power from the Kaministiquia Power Company to cope with the situation in the coming winter. From a recent survey of the industrial prospects in this vicinity it is estimated that the peak load demand of the City of Port Arthur will approximate 10,000 horse-power within the next few years.

The Commission received first-class service from the Kaministiquia Power Company during the year and the joint operation of the Commission's system with the municipality's Current River station was carried out very successfully.

During the year the Commission proceeded with the erection of a wood-pole entrance and switching structure for the purpose of sectionalizing the two 22,000-volt outgoing lines to the grain elevators and to the waterworks station, thereby greatly benefiting the operating facilities of the high-tension portion of the system.

## MUNICIPAL ACCOUNTS

The results in the municipalities of the co-operative distribution of Hydro power are shown in the tables submitted in this section. In accordance with the requirements of the Ontario Government the municipal year ends on December 31st. The tables which follow under "Municipal Accounts" cover the calendar year ending December 31st, while other sections of the annual report deal with the fiscal year ending October 31st.

The work of standardizing the electrical accounts of the Hydro-Electric municipalities, commenced in 1912, has been continued. During the year accounting systems were established in Arthur, Burgessville, Dublin, Grand Valley, Huntsville, Hensall, Forest, Rodney, Springfield, St. Jacob's, Tavistock, Watford, West Lorne and Wellesley, and the local officers instructed in the proper handling of the books.

A periodical inspection has been made of the electrical accounts of all Hydro-Electric municipalities, our accountants assisting the local officers by suggesting improved methods of office routine, and in the case of smaller towns and villages, where the utility is in charge of men of little bookkeeping experience, actually doing most of the accounting.

A system of monthly balance sheets and operating reports enables the Provincial Commission to keep in close touch with local conditions, and from the reports and other data collected and worked up by the auditors, the capital expenditure and operating expenses are periodically divided into the principal revenue accounts, lighting, commercial power, municipal power and street light, these in turn being set against the respective revenues for the purpose of rate adjustment.

This data enables this Commission to authorize and enforce a schedule of selling rates in each municipality, which makes each of the above-named revenue departments self-supporting, so that an excessively high rate in one does not take care of a deficit in another.

The seven statistical reports which follow show the result of operation and the present status of the electric utilities in the one hundred and forty-three municipalities in which the service has been installed long enough to justify a report.

The municipalities have been listed in the order of their size according to Municipal Bulletin No. 10, Bureau of Industries of the Ontario Department of Agriculture; the populations are shown and the statistics permit an intelligent comparison of operating results in municipalities where conditions are similar. This is resulting in a friendly rivalry between the municipalities for an increased load, an efficient and economical administration, and an intelligent effort to improve the load factor, which is so essential to low selling rates.

**Statement "A"** is a comparative condensed balance sheet of each municipality as at December 31st, 1916, and December 31st, 1917, showing the plant cost in logical subdivisions, and other items making up the total assets. The true or quick liabilities, such as debenture balance, bank overdraft and accounts payable, are totalled separately before including such reserve accounts as debentures paid, sinking fund reserve, depreciation reserve and surplus. In this way the relative increase in plant value and net debt during the year in any municipality can be quickly determined.

The percentage of net debt to plant cost at the end of each year has been worked out, and shows a marked decrease. The percentage dropped in 1917 from

78.4 per cent. to 75.5 per cent. Special attention is called to this very interesting and gratifying feature.

All of the accounts appearing in the balance sheet under "Reserves," such as "Debentures Paid," "Sinking Fund Reserve," "Depreciation Reserve," and "Surplus," might properly be called surplus and represent the gross profit from operation.

While a proper depreciation charge has been included in the operating expenses from the beginning, the plant extensions resulting from the growth of the service have in most cases absorbed most of the depreciation funds. A proper accounting has been kept of this, and interest credited the Depreciation Reserve on the funds so used. A characteristic feature of the operation during the past two years has been a steady increase in the cash balances, which in some cases now amount to more than 25 per cent. of the total plant cost, notwithstanding the constant reductions in selling rates. Many commissions have loaned cash to the municipalities, and surplus funds to the amount of \$64,346.00 have been invested in Canadian War Loans, an innovation unique in the operation of civic utilities.

**Statement "B"** is a condensed operating report for the year ending December 31st, 1917, showing the result in each municipality. The population and the number of consumers in each class is also given to facilitate comparisons. In some cases where the power was turned on subsequent to January 1st, the proportion of the annual fixed charges corresponding to the period of operation has been used, and in other municipalities where the operation covers a very short period, and no actual payment has been made, the fixed charges have been omitted entirely to simplify the accounting in future years and avoid the necessity for annual adjustments.

The cost of the service, which is the basis on which service is billed to the consumers, includes every possible loading, i.e., cost of power, operation, maintenance, administration, interest and sinking fund payments on debenture debt, and in addition the sinking fund equivalent of a 5 per cent. straight line depreciation charge. No utility is considered to be on a satisfactory basis until the revenue is sufficient to meet this burden. The rate of depreciation, however, is subject to modification to meet unusual conditions such as large investments for land or perpetual water rights—concrete construction, unusual types of overhead or underground construction or short term debentures.

A study of Statement "B" will show that of the 143 municipalities reported, the revenue in 136 was sufficient to take care of all operating and fixed charges and depreciation, in ten others the fixed charges and part depreciation were met, and in seven only was there an actual loss. The gross loss in the seven municipalities failing to meet their expenses amounted to \$6,909.23. Of this total \$6,135.98 was due to the abnormal cost of operating a steam plant at Brockville, where but a limited amount of Hydro power was available; \$594.87 at Durham was due to delay in securing equipment to serve a large cement plant, leaving a balance of \$178.38 distributed among five police villages. The net credit balance of surplus from the year's operation in 143 municipalities, amounted to \$385,367.80, and the systems are now serving 170,916 customers, and a population of approximately 1,168,000.

**Statement "C"** shows in detail the comparative revenue and expenses in each municipality for the past five years. This shows graphically the increase in business year by year and the gradual decrease in the proportion of revenue contributed by the municipal utilities. In comparing the cost of power purchased, the

varying price paid per horse-power must be taken into consideration. This schedule will be found in Statement "F."

**Statement "D"** shows for each municipality for each year of operation, the number of consumers served with light and power, the average monthly kw. hr. consumption, the average net cost per kw. hr., and the average net monthly bill. This is a tabulation of data built up on information not originally obtained for this purpose, and subject to errors, but the averages are substantially correct and show the constantly increasing monthly consumption and decreasing net cost per kw. hr. and average monthly bill, and reflects the satisfactory nature of the service from the standpoint of the consumer. The approximate net average cost per horse-power per year to power consumers is also shown for 1917.

**Statement "E"** shows the approximate installation and annual cost per lamp of the street lights in service in cities, towns and villages where Hydro service has been installed. An interesting feature is the annual cost per capita based on the total populations.

**Statements "F" and "G"** show comparatively the cost of power to the municipalities, the selling rates for power and light in 1917, and the recommended rates for 1918.

In order that the effect of the Hydro co-operative scheme on the Hydro municipalities as a whole may be clearly shown, the operation for the past six years of all municipalities has been consolidated into one report, likewise the balance sheets for five years. These consolidated reports show the sound financial condition of the enterprise from the municipal standpoint and meet every criticism against municipal ownership and operation of electric utilities as carried on under the control of the Commission. Particular attention is called to the steady decrease in the percentage which the net debt balance bears to the total assets each year.

\*Rate based on load characteristics and determined at end of year.

Note A—Power delivered at 26,400 or 22,000 volts.

Note B—Power delivered at 13,200 or 12,000 volts.

Note C—Power delivered at 6,600 volts.

Note D—Power delivered at 2,300 or 4,000 volts.

Tenth Annual Report  
OF THE  
HYDRO-ELECTRIC POWER  
COMMISSION

OF THE  
PROVINCE OF ONTARIO  
FOR THE YEAR ENDED OCTOBER 31st  
1917

VOLUME III.

---

PRINTED BY ORDER OF  
THE LEGISLATIVE ASSEMBLY OF ONTARIO

---

TORONTO:

Printed and Published by A. T. WILGRESS, Printer to the King's Most Excellent Majesty

1918

Printed by  
WILLIAM BRIGGS,  
Corner Queen & John Sts.  
Toronto.

*To His Honour, COLONEL SIR JOHN HENDRIE, K.C.M.G., C.V.O.,*

*Lieutenant-Governor of Ontario.*

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present to Your Honour the third volume of the Tenth Annual Report of the Hydro-Electric Power Commission of Ontario for the fiscal year ending October 31st, 1917.

Respectfully submitted,

ADAM BECK,

*Chairman.*

TORONTO, ONT., February 12th, 1918.

COLONEL SIR ADAM BECK, K.B., LL.D.,

*Chairman, Hydro-Electric Power Commission,*

*Toronto, Ont.*

SIR,—I have the honour to transmit herewith the third volume of the Tenth Annual Report of the Hydro-Electric Power Commission of Ontario for the fiscal year ending October 31st, 1917.

I have the honour to be,

Sir,

Your obedient servant,

W. W. POPE,

*Secretary.*

COLONEL SIR ADAM BECK, K.B., LL.D.

HONOURABLE I. B. LUCAS, M.P.P.

COLONEL W. K. McNAUGHT, C.M.G.

W. W. POPE, Secretary.

F. A. GABY, Chief Engineer.

# HYDRAULIC INVESTIGATIONS AND CONSTRUCTION

## STREAM FLOW MEASUREMENT

The flow measurements of the streams of the provinces during the year October 1, 1916, to September 30, 1917, have embraced practically the same waters as were under survey during the previous year. The most advantageous section established during the year was that on the Mattagami River, below the plant of the Mattagami Pulp and Paper Company, at Smooth Rock Falls. It is expected that this section will result in better estimates of stream flow for any tributary of the James Bay rivers than any heretofore secured. This is only the first of several rivers in the James Bay slope it is desired to bring under continuous and systematic observation. Unfortunately the work is handicapped at its present stage on account of the necessary reductions coming at a time when the organization for this work was capable for the first time of being in a position to adequately carry it forward.

In being obliged to limit the expenditure to the sum available, the importance of the continuity of records of water elevations will have to be considered greater than the close rating of the sections. This principle, together with the view that winter measurements at sections, where a rating curve is defined, are of more value than open water measurements at such sections, will govern the hydrometric expenditure of the coming year.

The percentage the run-off bears to the precipitation for the purposes of calculation of stream flow is of questionable value for application for other years than the one under consideration for any district. It may, however, be of service for assisting in estimates of flow for that particular year for other streams in the same district, and for this reason the percentage of run-off to precipitation is published for stations where the estimates of flow and precipitation for a whole year are available.

The year for which hydrometric data is published in this report has nothing on record of marked occurrence. The figures of flow for streams in that part of the province draining into the Winnipeg River are in closer agreement than those for any other section of the province. This is to be expected from the larger drainage areas, the weather conditions in winter being less liable to changes affecting the run-off, the uniformly good natural storage basins, and the well rated gauging stations. The weather conditions in the southwestern part of Ontario, in winter, cause fluctuations in the run-off, making close measurement of the latter more difficult than in localities with more fixed winter conditions.

At fifty-seven stations on the rivers of the province the stream flow has been under regular observation, and the data secured for the year is published herewith. For reasons mentioned above, some stations have been withdrawn from the list of those under regular observation. The selection of such stations has been a matter of considerable difficulty, but it is hoped that those finally decided upon will prove to be the ones of least value.

With the object of bringing the publication of stream flow data under the same water year as that adopted by Federal and other sources, the year October 1 to September 30 will be used by the Commission in future publications.

## POWER AND STORAGE SURVEYS

### General

During the past year a number of detailed surveys in connection with contemplated power construction have been made. In addition, reconnaissances were made at certain locations where there was not sufficient time available or the importance of the work did not justify more extensive surveys. These reconnaissances furnished the necessary information for the preparation of estimates and the compilation of reports on possible developments on the Ottawa River between Lakes Temiskaming and Mattawa, on the Driftwood River at Monteith, on the Sydenham River at Alvinston, and at the Notch on the Montreal River.

With the aid of the information secured in the field and that already available from other sources, estimates have been prepared on these projects. If it is desired to proceed with construction on certain of these at a later date, the additional topographic and hydrographic data can be readily secured.

### Meaford

Under date of August 15, 1917, the Commission, on request of the Council of the Municipality of Meaford, authorized the giving of assistance to the town in connection with estimating the cost of a local power development to be located on Big Head Creek. Surveys were therefore initiated in October, covering possible dam sites, power-house site, contours of the storage area above the dam, and a reconnaissance of possible reservoir areas on the upper head waters.

These surveys have now been completed, and the results plotted. Preliminary plans are being prepared on which estimates can be based. On the completion of these plans, estimates of cost will be made and a report drafted for presentation to the municipality.

### Nipigon River

In October, 1917, arrangements were made for surveys of the lower power sites on the Nipigon. A party was organized and work was started on October 17th. The results of this work are not yet available. Instructions were issued to this party to make the necessary surveys covering a possible development at Cameron's Pool proper, and also to determine the possibility of developing the total available head at Camp Alexander, which would include the Cameron's Pool proposition. From data now available it is expected that the results of the survey will demonstrate the feasibility of a development combining the several rapids above and below Cameron's Pool under a total head of approximately 117 feet, with a possible ultimate capacity of 100,000 horse-power.

### French River

The possible power developments on the French River are three in number, dependent in location on the construction plans of the contemplated Georgian Bay Ship Canal. The proposed scheme of canals entails the construction of three locks between Lake Nipissing and Georgian Bay. The Chaudiere lock will have a lift of 24 feet, the Five Mile lock a lift of 24 feet, and the Dalles lock a lift of 21 feet, making a total available head of 69 feet. With a view to obtaining more adequate data on which to base estimates for contemplated power developments on the river,

surveys were made during the summer of 1917 to supplement the information available in the Georgian Bay Ship Canal Report. These surveys covered the two upper sites at the Chaudiere and the Five Mile Rapids. While no work was done at the Dalles, the field surveys and the later office investigations appear to demonstrate that the most advantageous scheme of development would be to install the Chaudiere development first, then to proceed to the installation for the Dalles site, as the use of the Five Mile site entails the raising of the tailwater level at the Chaudiere by about six feet. The initial development at Chaudiere would therefore be for a head of about 30 feet.

The field surveys at the Chaudiere and the Five Mile sites demonstrated that development at these locations was in both cases quite feasible, and that at the Chaudiere an installation approximating 13,000 horse-power could be made at a reasonable cost under present market conditions.

### **Trent River Storage**

A start has been made on the compilation of the existing data concerning the flow of the waters tributary to the Trent River. The Commission has to date taken few measurements of the flow of these streams, and what data is available is that secured by the officers of the Department of Railways and Canals.

A reconnaissance of the storage sites as yet not developed on the Mississauga River and Jack's Creek has been made and the utility of further storage of the waters on these basins may become apparent when fuller information as to run-off is obtained.

### **Mississippi River Improvement Co. Arbitration**

Upon complaint of the Galetta Electric Light & Power Co., under the terms of The Improvement Company's Act of Incorporation, the Commission held two hearings of parties interested in the charges made against the power owners on the river for storage water supplied by the company's works.

The Commission's engineers, in connection with this investigation, made a trip over the river between Carleton Place and the Ottawa River and also visited the sites of the company's dams on the upper part of the river, besides some possible sites for future reservoir dams.

On the basis of the investigation in the field, and the evidence submitted at the hearings, a set of recommendations was prepared covering what was considered to be a fair and practicable method of adjusting and regulating tolls for storage water on the Mississippi River.

### Black River near Washago

**Location**—At the highway bridge known as Kennedy's Bridge, about 5 miles south-east of the Town of Washago, on lot 1, concession G, Township of Rama, County of Ontario.

**Records Available**—Discharge measurements at first bridge from August, 1913, to January, 1914. Discharge measurements at Kennedy's Bridge from February, 1914, and daily gauge heights from May 5, 1915.

**Drainage Area**—585 square miles.

**Gauge**—Vertical staff 0 to 12 feet on tree on left bank. Water elevations referred to a B.M. (elevation 30.00) on tie rod on downstream side of bridge.

**Channel and Control**—The channel is straight for 150 feet above and 700 feet below the gauging section. The banks and control can be considered permanent; as the velocity here is never very high. The bed of the stream is composed of rock.

**Discharge Measurements**—Made from the bridge and wading section at low water.

**Winter Flow**—Owing to the somewhat sluggish flow at this section, ice from December to March forms to a great thickness, and relation of gauge height to discharge is seriously affected during that period. Measurements are made to determine the winter flow.

**Regulation**—The flow at this section during May, June and July is controlled to a large extent by logging dams above. The operation of gates at these dams causes fluctuations in gauge heights, amounting to several feet at the gauge. At times logs lodge below section, causing considerable backwater.

**Accuracy**—For three months in the early summer the river stage is subject to large fluctuations, and the accuracy of the discharge depends upon accuracy of mean daily gauge heights. Rating curve not well defined at all stages.

**Observer**—Pearl Carrick, Washago.

(a) Ice measurement. Some velocities estimated.

(b) Ice measurement.

(c) Surface velocities recorded and co-efficient applied. Debris made vertical observations impossible.

(d) Reading taken at wading section 500 feet above gauge.

Bonnechere River at Renfrew

**Location**—One-half mile below Raglan St., Town of Renfrew, Township of Horton, County of Renfrew, on the Barnett Estate.

**Records Available**—Discharge measurements from September, 1916. Daily gauge readings from November 1, 1916.

**Drainage Area**—910 square miles.

**Gauge**—On the right bank of the river at the section, a box chain gauge with nine feet of standard gauge plates. Distance from end of weight to marker is 12.43 feet.

**Channel and Control**—The channel is straight for 100 feet above and 300 feet below the station, but both above and below the station long sharp curves occur. There is a high clay bank on the right, and a low clay bank on the left. At extreme high water there may be an escape from this channel of some water from higher above the section to points below the section. The bed of the stream is composed of clean small stones.

**Winter Flow**—Little ice effect expected, though on occasions frazil ice from the rapids above may make meter measurements difficult.

**Regulation**—The Round Lake Dam, the Golden Lake Dam for power purposes, and the dams on the upper river for lumbering purposes have large regulating effects on this river. The power plants in Renfrew, running twenty-four hours to their full capacity, and having little pondage, will not seriously affect the estimate of mean gauge heights.

**Observer**—R. Dalton, Renfrew.

Madawaska River at Claybank

Location—Near lot 7, concession 9, Township of McNab, County of Renfrew, half mile below Flat Rapids.

Records Available—High-water measurements during 1915 and 1916 to be used in conjunction with low-water measurements at this section for application to gauge readings taken at Claybank by the Ottawa River Storage Survey, from April 15, 1909. Discharge measurements commenced in October, 1916, at this section, and September, 1915, at high-water section.

Drainage Area—3,210 square miles.

Gauge—Nine feet of standard gauge plates on pier of Claybank bridge 500 feet below high-water section.

Channel and Control—Channel is straight for 3,000 feet above and 500 feet below the station and favorably fast current exists for metering purposes. Clay and gravel banks, high on the right bank, medium, to low on the left bank, but the river is not liable to overflow. The flow is through one channel at high and low stages and through two channels at medium stages. Possibly frazil ice may be expected on some days.

Discharge Measurements—From boat and ice.

Winter Flow—Gauge height discharge relation will be considerably affected by ice, but likely to be capable of close estimation from discharge measurements.

Regulation—There are no powers developed on the river as yet, though construction has started on one at the foot of Calabogie Lake, which will have considerable regulating effect on the river below, but possibly not acting rapidly enough to disturb the gauge height discharge daily estimate. The storage works for lumbering purposes on the upper river and its tributaries are still in use.

Observer—Mrs. Ed. Jandreau, R. R. Arnprior.

Madawaska River at Madawaska

**Location**—50 feet above the G.T. Ry. bridge, Canada Atlantic branch, 500 yards east of the Madawaska Station, Township of Murchison, District of Nipissing.

**Records Available**—Discharge measurements from September, 1915, and monthly thereafter, and gauge readings from September 27, 1915.

**Drainage Area**—800 square miles.

**Gauge**—Three feet of standard gauge plates secured vertically to pile, three feet west of face of east abutment.

**Channel and Control**—Channel is straight for about 400 feet above the section, curving slightly to the right under the bridge. The banks are sandy, and not liable to overflow. The bed of the river is soft, and there are some weeds above the section. The point of control is not clearly defined.

**Discharge Measurements**—Made about fifty feet above gauge from a boat.

**Winter Flow**—Affected by ice conditions.

**Regulation**—Lumber interests on the river above the section operate dams for driving purposes.

**Accuracy**—Open water rating curve for ordinary stages changing slightly.

**Observer**—G. Wormke, Madawaska.

Maganetawan River (North Branch) near Burk's Falls

Location—One mile north of Burk's Falls station, 200 feet upstream from the Grand Trunk Railway bridge, on lot 7, concession 10, Township of Armour, District of Parry Sound.

Records Available—Monthly discharge measurements from June, 1915. Daily gauge readings from August 1, 1915.

Drainage Area—107 square miles.

Gauge—Vertical steel staff with enamelled face fastened to a 2 x 4 scantling and connected to a wooden platform on the right shore about 250 feet above G.T.R. bridge. Zero of the gauge (elev. 27.23 feet) is referred to a bench mark (elev. 35.00 feet) painted on top of 5-ft. iron pipe 20 feet above gauging station.

Channel and Control—Straight for about 200 feet above and 100 feet below the gauging station to the falls. The banks are high and wooded, and are not liable to over-flow. The bed of the stream is composed of clay and a few rocks, practically permanent. The velocity is moderate.

Discharge Measurements—Made by wading with a small Price current meter, in high water just above gauge, in low water 150 feet below gauge.

Winter Flow—Open water conditions.

Accuracy—The rating curve is fairly well defined for lower gauge readings.

Observer—Henry Stroud, Burk's Falls.

Maganetawan River (South Branch) near Burk's Falls

Location—One-half mile south of Burk's Falls station, and 200 feet east of G.T. Ry. tracks on lot 8, concession 8, Township of Armour, Parry Sound District.

Records Available—Discharge measurements from June, 1915. Daily gauge heights from August 1, 1915.

Drainage Area—257 square miles.

Gauge—Vertical steel staff with enamelled face, graduated in feet and inches, fastened to 2 x 8 scantling wedged between two hardwood trees on the left shore 20 feet above gauging station. Zero of the gauge (elev. 22.00 feet) is referred to a bench mark (elev. 35.00 feet) painted on top of a 5-ft. iron pipe located near the gauge on the north branch of the river.

Channel and Control—Straight for about 250 feet above and 500 feet below the rapids. The banks are high and wooded, and are not liable to overflow. The current is moderate.

Discharge Measurements—Made by wading with a small Price meter and from G.T.R. bridge below gauge.

Winter Flow—Open water conditions.

Regulation—Temporary dams above, which are used during log driving season, cause fluctuations at the gauge.

Accuracy—Rating curve only fairly well defined.

Observer—Henry Stroud, Burk's Falls.

Mississippi River at Ferguson's Falls

Location—At the highway on the road through the Village of Ferguson's Falls, near lots 16 and 17, concession 12, Township of Drummond, County of Lanark.

Records Available—Discharge measurements from July, 1915, and gauge readings from July 13, 1915.

Drainage Area—1.042 square miles.

Gauge—0 to 6 feet of standard gauge plates secured to the inner face of the first pier from the south end of the bridge and near the downstream corner of the pier.

Channel and Control—Channel is straight for 300 feet above and ½ mile below the gauging station. The banks are not liable to overflow. There are 7 channels, formed by the piers of the bridge. The present control is a short distance below the section, and ice action there will affect the discharge relation at low winter stages, but this will not be the point of control for high-water stages. At certain stages measurements are made 1,500 feet below bridge.

Winter Flow—Discharge relation will be affected by ice.

Regulation—The river is regulated throughout its length by power and storage dams, as well as dams in connection with the timber industry.

Accuracy—Open flow relation will be good.

Observer—A. M. Sheppard, Ferguson's Falls.

Mississippi River at Galetta

- Location**—In the Village of Galetta, Township of Fitzroy, County of Carleton, about one hundred feet above, and parallel to the highway bridge over the river. It is only a few hundred yards below the dam and power house of the Galetta Power & Milling Company.
- Records Available**—Discharge measurements from June, 1915, and gauge readings twice daily from June 24, 1915.
- Drainage Area**—1,456 square miles.
- Gauge**—0 to 9 feet of standard gauge plates secured to the left abutment of the highway bridge. High stages measured by rule from gauge.
- Channel and Control**—Channel is straight for 200 feet above and below the section to a little rapid. The river bed is composed of gravel and stones, with solid rock on the right bank and gravel on the left bank. The point of control is through a solid rock formation a hundred and fifty yards below the section.
- Discharge Measurements**—Made by wading and from a boat held up to tag line by cable. Extreme high-water measurements have to be made from the highway bridge.
- Winter Flow**—The winter conditions here will not seriously affect the gauge height and discharge relations.
- Regulation**—The river is subject to regulation throughout its entire length. In the upper river are storage dams for power purposes, as well as timber dams for driving purposes.
- Accuracy**—Owing to the wet season the wasted water has been considerably more than would usually be the case. This season's relations between gauge height and discharge are likely better than those of the ordinary year.
- Co-operation**—Discharge measurements made at the bridge by the Department of Public Works of Canada.
- Observer**—J. P. Coyne, Galetta.

Discharge Measurements of Mississippi River at Galetta in 1916-7

### Mississippi River near Snow Road

**Location**—At the highway bridge about two miles below the Village of Snow Road, Township of Sherbrooke, County of Lanark.

**Records Available**—Discharge measurements from July, 1915, and gauge readings on week days since July 30, 1915.

**Drainage Area**—446 square miles.

**Gauge**—0 to 6 ft. of standard gauge plates secured vertically to the downstream side of the right abutment of the highway bridge. The elevation of the zero on gauge is assumed as 100.00.

**Channel and Control**—The channel approaches and leaves the section at a slight angle. The banks are high, and are not liable to overflow. The bridge pier forms two channels at the gauging section. Earth, rocks and gravel in the river bed, not shifting. Control for ordinary stages not well defined. At very high water stages the point of control is probably the head of the rapids just above High Falls.

**Discharge Measurements**—Measurements made from bridge at all stages.

**Winter Flow**—Discharge relation affected by ice.

**Regulation**—The power and lumber companies operating on this river have storage dams above this point.

**Accuracy**—No Sunday readings have been secured by gauge-readers, but the fluctuation in stage is slow. The open-water relation should be good.

**Observer**—Fred. Jackson, Snow Road.

Moira River near Foxboro

**Location**—Three hundred feet above G.T.R. Crossing, and six hundred feet east of Foxboro Station, on the G.T.R.-Belleville, Peterboro Branch. Near Lot 5, Concession VI, Township of Thurlow, County of Hastings.

**Records Available**—Monthly discharge measurements from September, 1915, and gauge readings from October 12, 1915.

**Drainage Area**—1,038 square miles.

**Gauge**—A boxed chain gauge on the right bank of the river against a tree 400 feet above section. When the gauge reads zero the elevation of the water is 320.46.

**Channel and Control**—At one side of the river at the section are boulders and rocks, but the rest of the section is smooth, solid rock, liable to no movement at all. The control is only a few feet below the section and is not likely to freeze over in winter except for short periods of time.

**Discharge Measurements**—At ordinary stages the measurements are made by wading, at tag line.

**Winter Flow**—The relation of gauge height to discharge will be but slightly affected by ice, but likely in a fairly uniform manner throughout the winter.

**Regulation**—The river above the section has dams in many places besides the regulation for the lumber interest, on different tributary lakes and streams.

**Accuracy**—Open water relation will be good.

**Observer**—C. Stewart, Foxboro P.O.

Muskoka River (North Branch) near Port Sydney

Location—At the highway bridge near the Village of Port Sydney and ¼ mile below Mary Lake, on lot 25, concession 5, Township of Stephenson, Muskoka District.

Records Available—Discharge measurements from April, 1915. Daily gauge heights from April 16, 1915.

Drainage Area—560 square miles.

Gauge—Vertical steel staff with enamelled face graduated in feet and inches and fastened to abutment on left upstream side of bridge. Zero of gauge (elev. 7.00 feet) is referred to a bench mark (elev. 24.78 feet) painted on top of right abutment, downstream side.

Channel—Straight for about 1,500 feet above and 500 feet below gauging station. Both banks are high, wooded, and not liable to overflow. The bed of the channel is composed of clay and gravel.

Discharge Measurements—Made from highway bridge with a small Price current meter.

Winter Flow—Open water conditions throughout the year.

Regulation—The operation of dam at Mary Lake during certain periods of the year will cause fluctuation at the gauge.

Accuracy—The rating curve is well defined, and estimates of discharge are good.

Observer—A. E. McInnes, Port Sydney.

Muskoka River (South Branch) at Tretheway's Falls

**Location**—At small steel highway bridge known as Tretheway's Falls Bridge, about 1 mile south of the Muskoka Falls Post Office, and about 7 miles south of the Town of Bracebridge, Township of Draper, Muskoka District.

**Records Available**—Discharge measurements from August, 1912. Daily gauge heights from June 4, 1914.

**Drainage Area**—668 square miles.

**Gauge**—As there is no available place for establishing a permanent staff gauge, a bench mark (elevation 25.00), painted on a stringer, on the up-stream side of the bridge, is used in ascertaining the water elevation, by measuring down to the surface of the stream with a graduated staff. It is referred to a bench mark (elevation 33.08) painted on a large rock on the right bank, 90 feet to the right of the downstream side of the bridge.

**Channel and Control**—Straight for about 300 feet above and 300 feet below the station. The banks are fairly high, rocky and wooded and will not overflow. The current is very swift and the bed of stream is rough and rocky, with a heavy slope about 250 feet below the section.

**Discharge Measurements**—Made from the downstream side of the bridge with a Price current meter and a stay line.

**Winter Flow**—The gauge is located where the current is swift and ice seldom forms across the river for the entire width. The relation of gauge height to discharge is but slightly affected by ice.

**Accuracy**—Measurements made at Black's Bridge 1 mile above, were used in conjunction with those made at Tretheway's Falls, and a fairly well-defined rating curve has been established. Open water curve used throughout the year.

**Observer**—Wesley Morrow, Muskoka Falls.

Napanee River near Napanee

Location—At Mink's Bridge, three miles from Napanee, near lot 1, concession 1, Township of Camden, County of Addington.

Records Available—Discharge measurements from August, 1915, and gauge readings from September 8, 1915.

Drainage Area—300 square miles.

Gauge—A boxed chain gauge on the right bank of the river 400 feet above the section. Nine feet of standard gauge plates. When the gauge reads zero the elevation of the water is 97.93.

Channel and Control—The channel is curved above the section to within 20 feet of the bridge, and is straight for 300 feet below. The right bank is high, while the left is comparatively low and liable to overflow. The bed of the stream is composed of rocks and gravel, not likely to shift.

Discharge Measurements—Made by wading at low stages and from bridge at high stages.

Winter Flow—Relation of gauge height to discharge is affected by ice.

Regulation—There are several power developments on the upper part of the river, and also lumber dams on tributary waters.

Accuracy—Two daily readings give only fair mean daily gauge heights.

Observer—Mrs. Dan. O'Shaughnessy, Napanee.

Petawawa River near Petawawa

**Location**—About 1½ miles southwest of Petawawa station above C.P.R. bridge, near lot 15, concession 7, Township of Petawawa, County of Renfrew.

**Records Available**—Discharge measurements from October, 1915, and daily gauge heights from November 5, 1915.

**Drainage Area**—1,572 square miles.

**Gauge**—Temporary mark used from December 15, 1915, to February 29, 1916, to obtain water elevations afterwards reduced to same datum as permanent gauge, screwed to plank, bolted to large rock in river, back of Rantz's house, 1,000 feet above the station, and 200 feet above the head of the rapids. This gauge has been used for gauge readings since March 1, 1916.

**Channel and Control**—The controlling section is a few hundred yards above the metering section. The river is straight for a few hundred feet each side of the section, but is crooked and fast for two miles below the section. The soundings for depth are taken for each metering as the water is fast and the river bed of stones may change slightly between meterings, and the depths do not change the same as the gauge readings.

**Discharge Measurements**—The discharge measurements for normal and low flows, summer and winter, are made by wading in fast water near the end of the straight stretch in the river downstream from the gauge. At high water measurements are made from the road bridge leading to Petawawa Military Camp.

**Winter Flow**—The control here is at fast water and only slightly affected by ice.

**Accuracy**—Gauge readings twice daily give good mean daily gauge height as the fluctuation at the gauge is slow.

**Observer**—Elsa Rantz, Petawawa.

Seguin River near Parry Sound

Location—700 feet below Mountain Dam, two miles above the highway bridge, and about seven miles above the Town of Parry Sound, Township of McDougall, Parry Sound District.

Records Available—Discharge measurements from June, 1914. Daily gauge heights from August 1, 1915, to December 31, 1917.

Drainage Area—380 square miles.

Gauge—Vertical steel staff with enamelled face, graduated in feet and inches, firmly wedged in rock on left shore 200 feet below dam. Zero of gauge (elev. 8.00 feet) is referred to a bench mark (elev. 15.00 feet) painted on a large rock directly across stream from gauge.

Channel—Both banks are high, wooded and not liable to overflow. The bed of the stream is composed of rocks and boulders, slightly shifting. The current is swift, and flows through one channel at all stages.

Discharge Measurements—Made by wading with a Price current meter. During high water, measurements are made at the highway bridge at the head of Mill Lake, 2 miles below wading section.

Winter Flow—Ice forms along the banks of river at the station during the winter months. The river is entirely covered with ice for a considerable distance above and below station.

Regulation—The dam 700 feet above gauging station causes fluctuation of river at gauge.

Accuracy—Estimates of flow at this station cannot be considered better than fair.

Observer—Percy Burnside, Parry Sound.

(a) Reading taken at highway bridge. Ice measurement.  
(b) Reading not reliable owing to operation of Mill Lake dam below section.  
(c) Reading taken at highway bridge.  
(d) Readings taken at Portage Creek which enters Seguin River between gauge and high-water section.

Tay River near Glen Tay

**Location**—Near lots 20 and 21, concession 11, Township of Bathurst, County of Lanark. At the highway bridge north of the Village of Glen Tay, and east of the auxiliary plant of the Canadian Electric & Water Company, Limited, of Perth and Ottawa.

**Records Available**—Discharge measurements July, 1915, and gauge readings from July 10, 1915.

**Drainage Area**—204 square miles.

**Gauge**—Vertical steel staff 0 to 3 feet fastened to the pier of bridge one foot above section.

**Channel and Control**—The channel is straight from the dam 150 feet above and straight for 250 feet below the section. The banks are high, and not liable to overflow. The bed of the river is composed of shale and stones, not shifting. The flow is confined between the bridge abutments at all stages. The control is a short distance below the section, and the flood flow is likely to disturb it to some extent.

**Discharge Measurements**—Made by wading at ordinary stages, and from the bridge at very high stages.

**Winter Flow**—Channel at section likely free from ice during winter, but will be affected by ice formation below the section.

**Regulation**—The river is dammed immediately above the section and one mile further up, for power purposes, and the Department of Railways and Canals operate a dam at the foot of Bob's Lake for regulating canal purposes.

**Accuracy**—The open-water rating will be very good.

**Observer**—Paul Griffin, Manion P.O.

York River near Bancroft

**Location**—At the highway bridge one and a half miles below Bancroft, near lots 53 and 54, west of the Hastings Road, Township of Faraday, County of Hastings.

**Records Available**—Discharge measurements from July, 1915. Daily gauge heights from July 16, 1915.

**Drainage Area**—374 square miles.

**Gauge**—Vertical standard gauge plates 0 to 6 ft. secured on the upstream face of the right bridge pier near the west corner.

**Channel and Control**—The channel is straight for 400 feet above and 250 feet below the section. The banks are high and sandy, not liable to overflow. The bed is composed of gravel. Flow takes place in two channels under the bridge at high stages, and in one channel at lower stages.

**Discharge Measurements**—Made from the bridge at all stages.

**Winter Flow**—Ice will materially affect the open-water relation of gauge heights to discharge, and frazil ice at times makes meterings difficult.

**Regulation**—The dam at Bancroft gives very small storage, and the plants there do not use the entire flow. On account of the electrical plant working at night, and the other mills during the day, daily gauge readings give fairly accurate figures for the mean daily stage. Some of the tributary streams are controlled by dams for storage and driving purposes for the lumber industry.

**Accuracy**—As the river bed is composed of gravel, slight movement no doubt takes place without changing the general profile and section.

**Observer**—J. L. Churcher, Bancroft.

aux Sables River at Massey

**Location**—About 800 feet upstream from C.P. Ry. bridge and ¼ mile northeast of railway station, in the Village of Massey, Township of Salter, Sudbury District.

**Records Available**—Discharge measurements from August, 1914. Daily gauge heights from June 10, 1915.

**Drainage Area**—524 square miles.

**Gauge**—A chain gauge has been established here reading zero with water at an elevation of 16.00 referred to a B.M. elevation 29.76 painted on top of rock on left bank at entrance to rapids. The gauge is located twenty feet below the section.

**Channel and Control**—Straight for 1,000 feet above and 100 feet below the gauging station to a rapid. Both banks are high, rocky, wooded, and are not liable to overflow. The bed of the stream is composed of clay and gravel, practically permanent. The velocity is moderate, and one channel exists at all stages.

**Discharge Measurements**—Made by wading during low water periods. At high stages measurements are made from boat with a Price current meter.

**Regulation**—The operation of logging dams above cause fluctuations in gauge heights during the log-driving season.

**Observer**—Jas. Blight, Massey.

Blanche River near Englehart

**Location**—At the highway bridge near the High Falls, 3½ miles north-west of the Town of Englehart, north half of lot 12, concession 3, Township of Evanturel, Temiskaming District.

**Records Available**—Discharge measurements, August, 1914, to October, 1916. Gauge heights from October 8, 1914, with occasional omissions.

**Drainage Area**—430 square miles.

**Gauge**—Vertical steep staff 0-12 feet, located on the southeast downstream side of first pier. The zero on the gauge (elev. 8.00) is referred to B.M. elev. 23.39, painted on a conspicuous rock on the right bank 75 feet below the bridge.

**Channel**—At a point 200 feet above the station, the river curves from the right and then flows straight, up to a point 700 feet below the station. Both banks are high, rocky, wooded, and will not overflow. The bed of the stream is composed of clay, practically permanent. The current is very slow, flowing through 2 channels at low stages and 3 channels during high water periods.

**Discharge Measurements**—Made from the highway bridge with a Price current meter.

**Winter Flow**—During the winter months measurements are made through the ice to determine the winter discharge. The relation of gauge height to discharge is seriously affected by ice.

**Regulation**—A temporary dam is built above the station during the summer months. This dam is used for storing water during the period when the river is used for log driving. The gauge heights at the section are therefore affected during the log driving periods.

**Accuracy**—Rating curve fairly well defined between gauge heights 10.50 feet and 12.00 feet.

**Observer**—W. D. Groom, Englehart.

Frederickhouse River at Frederickhouse

**Location**—On the upstream side of the highway bridge crossing the river on the township line between the Townships of Fournier and Clute, District of Temiskaming.

**Records Available**—Discharge measurements and daily gauge heights to September 30, 1917, from July, 1915, have been taken at the railway crossing 1.8 miles north and downstream from the present point of observation and measurement.

**Drainage Area**—1,260 square miles.

**Gauge**—Standard enamelled gauge plates 0-12 feet on the upstream side of the first pier from the left bank. Zero of the gauge is at an assumed elevation of 98.00 feet referred to a B.M. elev. 115.18, the top of an iron cap projecting above the floor of the bridge west of the west pier.

**Channel and Control**—The current is slow, but even across the section, and through one channel, away from the bridge, where discharge measurements are made when possible. Otherwise measurements are made from the bridge that breaks the flow into several channels.

**Discharge Measurements**—Made by current meter from the bridge, ice, or boat.

**Regulation**—There is no artificial control of the waters of this river above the new section.

**Observer**—Allard Bourassa, Frederickhouse.

Kagawong River at Kagawong

**Location**—150 feet below Kagawong Falls in the Village of Kagawong, Township of Billings, Manitoulin Island.

**Records Available**—Discharge measurements from July, 1915. Daily gauge heights from July 11, 1915, to December 31, 1917.

**Drainage Area**—94 square miles.

**Gauge**—Vertical steel staff with enamelled face, graduated in feet and inches, connected to a 2 x 4 scantling and attached to a large rock in stream 20 feet below the gauging station. Zero of the gauge (elev. 10.00 feet) is referred to a bench mark (elev. 15.86 feet) painted on a rock on right bank at the gauging station. The initial point for soundings is located on an iron post on the left bank opposite the bench mark.

**Channel**—Straight for about 100 feet above and below the gauging station. Both banks are high and wooded, and are not liable to overflow. The bed of the stream is composed of rock and clay, slightly shifting, one channel existing at all stages.

**Discharge Measurements**—Made by wading with a small Price current meter.

**Regulation**—The flow is controlled by the dam 200 feet above the falls.

**Accuracy**—A mill operates just above the section, but gauge readings are taken at such times as should show a fairly accurate mean of elevation.

**Observer**—Cora Hunt, Kagawong.

### Mattagami River at Smooth Rock Falls

**Location**—Lot 23, Concession XI, Township of Kendry, Temiskaming District. About one mile below the plant of the Mattagami Pulp and Paper Co. at Smooth Rock Falls.

**Records Available**—The Mattagami Pulp and Paper Co. take readings of the water below their plant, from which it is expected estimates of flow may be made when a curve is defined.

**Drainage Area**—3,970 sq. miles.

**Gauge**—A chain gauge is installed reading zero with the elevation of the water at 707.00, referred to a B.M. elev. 725.04. The B.M. is 10 feet S.W. of the initial point for soundings the head of a nail driven in a blazed and painted tree.

**Channel and Control**—A well-defined, evenly distributed current exists at all times. There is but one channel at all stages. Extreme high water is not likely to go over the river banks at this spot. The control point is not well defined, or as yet has not been ascertained.

**Regulation**—Extensive storage works have been constructed for the purposes of regulating the headwaters of the river for the benefit of power plants.

**Discharge Measurements**—Made by current meter from a boat or the ice.

**Co-operation**—The engineers and officers of the Mattagami Pulp and Paper Co. co-operated with the Commission's engineers in obtaining discharge measurements and have taken elevations of water level below the plant from which it is expected estimates of flow antedating the making of discharge measurements will be possible.

**Winter Flow**—The amount of ice effect on discharge is not yet determined, but will be considerable.

Mississagi River at Iron Bridge

**Location**—At highway bridge in the village of Iron Bridge, south half of lot 3, concession 2, Township of Gladstone, District of Algoma.

**Records Available**—Discharge measurements from September, 1915. Daily gauge heights from November 16, 1915.

**Drainage Area**—3,565 square miles.

**Gauge**—Vertical steel staff with enamelled face graduated in feet and inches, 0 to 6 foot section placed on pile on left shore 350 feet down stream from bridge, 6 to 12 foot section placed on down stream side of right abutment of bridge. Zero of the gauge (elev. 30.00) referred to bench mark (elev. 55.50 feet) on top of right abutment down stream side.

**Channel**—Straight for about 300 feet above and about 1 mile below the gauging station. The bed of the stream consists of clay and sand, slightly shifting.

**Discharge Measurements**—Made from highway bridge with small Price current meter.

**Control**—About eleven miles below the gauging station there is a small falls and rapids known as the Mississagi rapids. Log jams sometimes occur on these rapids during low water period, which may cause back water at the gauging station.

**Winter Flow**—During the winter months measurements are made through the ice to determine the winter flow. The relation of gauge height to discharge is seriously affected by ice.

**Observer**—Jas. Tulloch, Iron Bridge.

South River near Powassan

**Location**—At “Gough’s” highway bridge on the Nipissing village road 2.5 miles north-west of Powassan station and at the farm owned by Owen Gough between lots 20 and 21 and 14th and 15th concessions in the Township of Himsworth in the District of Nipissing.

**Records Available**—Discharge measurements from July 6, 1917, and before then at “Healey’s” bridge. Daily gauge heights from March 11, 1914.

**Drainage Area**—294 square miles.

**Gauge**—Standard enamelled gauge plates 0-12 feet on the northwest corner of the left abutment. Elevation of the zero of the gauge 23.00 feet is referred to a B.M. elevation assumed 56.15 feet painted on the top of a corner of barn foundation 350 feet from the section.

**Channel**—Straight for about 200 feet above and 150 feet below the metering section. With high water conditions both banks are liable to overflow. The bed is largely composed of soft black muck, likely to shift under high velocities.

**Discharge Measurements**—Made with current meter. They are made from the bridge when velocities are high enough for good results and at other times from a boat at a section 100 feet below the bridge.

**Winter Flow**—Measurements made through ice in the winter. Ordinary relation between gauge heights and discharge are seriously disturbed by ice conditions, and measurements are made in the winter to determine this effect.

**Accuracy**—A fairly well defined rating curve has been established.

**Observer**—Owen Gough, Powassan.

Spanish River at Webbwood

**Location**—On the highway bridge about one and a half miles east of Webbwood station on the Sault branch of the C.P.R. and eight miles below Espanola Mills.

**Records Available**—Gauge readings daily from February 1, 1917. Discharge measurements monthly from January, 1917.

**Drainage Area**—4,340 square miles.

**Gauge**—Vertical steel staff gauge 0-9 feet on third pier from north abutment and 9-12 feet on fourth pier.

**Channel**—The approach to the bridge is straight for 300 feet and below the bridge for one-half mile.

**Discharge Measurements**—During the open water season the measurements are made from the bridge and during the winter seasons the measurements are made from the ice about half a mile below the bridge.

**Winter Flow**—The relation between gauge readings and discharge is seriously disturbed during the winter months, but the ice effect is shown to be regular in direction.

**Regulation**—The Spanish River Pulp and Paper Co. operate a plant at Espanola, eight miles above the section, which is partly shut down on Sundays, accounting for the fluctuation in gauge heights at the week ends. This company also has storage dams at various locations on the headwaters of this river for conserving the flow for both lumbering and power purposes.

**Accuracy**—The curve is based on 15 discharge measurements, the majority being made during the current year.

**Observer**—D. J. Stewart, Webbwood.

Sturgeon River at Smoky Falls

**Location**—At the highway bridge at Smoky Falls Post Office, and two miles above the Smoky Falls, Township of Springer, Nipissing District.

**Records Available**—Discharge measurements from August, 1912. Daily gauge heights, January 12 to 31, 1914, and from March 15, 1914.

**Drainage Area**—2,570 square miles.

**Gauge**—Vertical steel staff with enamelled face, graduated in feet and inches, and attached to a wooden pile on the right, upstream side of the bridge. The zero of the gauge (elevation 32.00) is referred to a bench mark (elevation 53.47) painted on a rock on the right bank of the river, about 175 feet above the bridge.

**Channel**—Straight for about 700 feet above and about 1 mile below the station. The banks are fairly high, clean, sandy and not liable to overflow. The bed of the stream is composed of clay and sand, slightly shifting. The current is fast and smooth, flowing through six channels, formed by bridge piers and abutments.

**Discharge Measurements**—Made from the bridge during all stages.

**Winter Flow**—During the winter months the river is covered with ice, and measurements are made through the ice to determine the winter discharge. The relation of gauge height to discharge is seriously affected by ice.

**Regulation**—Dams above are used for power and log driving purposes.

**Accuracy**—The open water rating curve is fairly well defined. The relation of gauge height to discharge is affected during the log-driving season.

**Observer**—A. Pineault, Smoky Falls.

Discharge Measurements of Sturgeon River at Smoky Falls in 1916-7

Vermilion River near Whitefish

**Location**—At the C.P.R. bridge, two miles east of the Whitefish station, Township of Graham, District of Sudbury.

**Records Available**—Discharge measurements from August, 1913. Daily gauge heights from June 11, 1915.

**Drainage Area**—1,580 square miles.

**Gauge**—Vertical steel staff with enamelled face graduated in feet and inches attached to pile at left abutment of old highway bridge. Zero of the gauge is at an elevation of 25.00 referred to a bench mark elevation 38.39 painted on rock on right bank 15 feet above section.

**Channel and Control**—Straight for about 300 feet above and 700 feet below the station. Both banks are high, rocky and wooded, and not liable to overflow. Bed of stream is rocky and permanent, current is swift, two channels existing at all stages. At low stages log jams occur at the rapids, causing backwater on the gauge.

**Discharge Measurements**—Made from the bridge with current meter.

**Winter Flow**—The relation between the gauge heights and discharge is seriously affected by ice under some conditions.

**Accuracy**—The relation between gauge heights and discharge have been so seriously disturbed by ice and log conditions during the past year that reliable estimates of flow have not been deemed possible on the information available.

**Observer**—A. Boucher, Whitefish.

Discharge Measurements of Vermilion River near Whitefish in 1917

Wanapitei River at McVittie's

**Location**—Along the C. N. Ry, line, twenty miles south of the Town of Sudbury, and about two miles up stream from McVittie's power house, and 300 feet above Water Falls, southeast corner of the Township of Secord, District of Sudbury (Mining Division).

**Records Available**—Discharge measurements from September, 1916. Daily gauge heights from October 1, 1916.

**Drainage Area**—1,190 square miles.

**Gauge**—Chain gauge on left bank fifty feet above section. When the gauge reads zero the elevation of the water is 99.00, referred to a B.M. (elev. 105.15) on a stump just below section.

**Channel**—Straight for about 400 feet above and 300 feet below the station. Banks are low, rocky, and wooded, and liable to overflow. The bed of the stream is composed of clay, practically permanent; the current is slow.

**Control**—During log driving periods logs may jam at the head of the falls, which is 300 feet below station. The jam may cause a back water affect at the gauging station.

**Discharge Measurements**—Made from boat with a small Price current meter.

**Observer**—J. S. McVittie, McVittie's Siding.

Eagle River at Eagle River

**Location**—At the highway bridge 1,000 feet south of the C.P. Ry. crossing, in the Township of Aubrey, District of Kenora. This river is a tributary of the Wabigoon River.

**Records Available**—Discharge measurements from January, 1914. Daily gauge heights from February 12, 1914.

**Drainage Area**—970 square miles.

**Gauge**—Vertical staff with enamelled face screwed to a 2 x 4 inch scantling, which is nailed to the south side of the bridge crib near the south-east corner, and next to the left bank of the river. The zero on the gauge (elev. 1,172.99) is referred to a bench mark (elev. 1,176.56, C.P.R. datum) painted on a point of rock on the left bank a few feet south-west of gauge.

**Channel and Control**—Straight for about 100 feet above the station, with the water flowing slowly. Below the section the channel is straight for about 20 feet, with the water running swiftly to the “Cascades.” The banks are clean, high, rocky and not liable to overflow. The bed consists of rock, and is permanent. At extreme highwater the flow is cut up by the bridge piers, but under normal conditions the flow is all through one channel.

**Discharge Measurements**—Made from the highway bridge with a small Price current meter.

**Winter Flow**—Not affected by ice. The water at the section never freezes.

**Accuracy**—The station rating curve is well defined. Fluctuation in gauge heights is occasionally augmented by wind on Eagle Lake. This is in every way an exceptionally good station.

**Observer**—J. Nelson, Eagle River.

### English River at Caribou Falls

**Location**—About 1,200 feet above Caribou Falls, the last falls on the river, and about five miles from the Winnipeg River, District of Kenora.

**Records Available**—Discharge measurements from May, 1914.

**Drainage Area**—21,600 square miles.

**Gauge**—Vertical staff located on the left bank of the river 25.6 feet north of a blazed jack pine, which is used as the initial point for soundings. The zero on the gauge (elevation 100.00) is referred to a bench mark (elevation 109.45) painted on a point of rock 16 feet south of the blazed jack pine.

**Channel and Control**—Above the station the channel takes a 90 degree curve to the right, thence following comparatively straight to the head of the falls. Both banks are high, rocky and wooded, and not liable to overflow. The bed of the stream is rocky, with large boulders or protruding shelves of rock and practically permanent. The water at the left bank is still, backflow existing at higher stages. The natural control is wide and unobstructed.

**Discharge Measurements**—Made from a canoe, and occasionally through ice, with a small Price current meter or from raft in winter.

**Winter Flow**—Ice has little effect, the channel here not freezing over every winter.

**Accuracy**—A well defined curve has been secured here.

English River at Ear Falls

**Location**—At the foot of Lac Seul, about three miles below Pine Ridge Hudson's Bay Co's. Post, and about ¼ mile above upper Ear Falls, District of Kenora.

**Records Available**—Discharge measurements from July, 1914. Weekly gauge heights are secured here and daily gauge heights at a gauge at Pine Ridge Post.

**Drainage Area**—11,700 square miles.

**Gauge**—Vertical staff with enamelled face screwed to a 6-inch hewn spruce post which is firmly wedged in the rock of the left bank 200 feet below a 2-inch poplar, which is painted white and used as the initial point for soundings. The zero on the gauge (elev. 115.12) is referred to a bench mark (elev. 122.75) painted on a point of rock 5 feet above the gauge.

**Channel and Control**—Straight for about 300 feet above and below the station, then turning to the left widens out to the top of the falls. Both banks are high, rocky and wooded, and will not overflow. The bed of the stream at the section is apparently permanent; the current sluggish, and flowing through one channel at all stages. The natural control is wide, shallow and unobstructed.

**Discharge Measurements**—Made from a canoe with a small Price current meter.

**Winter Flow**—Ice conditions have only slight effect.

**Accuracy**—Back flow at the left bank causes a little difficulty in making accurate discharge measurements.

**Observer**—Henry Busch, care of Hudson Bay Co's. Lac Seul Post, Sioux Lookout P.O.

**Remarks**—The very steady regimen of the English River, together with the lack of gauge readers, makes it possible and necessary to apply the gauge heights at Ear Falls to gauges at Manitou and Oak Falls. Gauge readings taken on nearly the same day were used in making up curves for the three stations, and the results obtained justify the assumptions made. No allowance is made for lag. With additional data it may be possible to extend the system to points farther down the river.

Discharge Measurements of English River at Ear Falls in 1917

English River at Manitou Falls

**Location**—About 800 feet above the first chute of the Manitou Falls, and five miles below the mouth of the Mattawa River and the old Mattawa H. B. Co's. Post. Cedar River enters the English River ½ mile below the metering section.

**Records Available**—Discharge measurements from July, 1914.

**Drainage Area**—14,600 square miles.

**Gauge**—Vertical staff with enamelled face screwed to a 6-inch pine post and firmly wedged and wired to the right bank 15 feet south of a 2-inch jack pine, which is used as the initial point for soundings. The zero on the gauge (elev. 89.37) is referred to a bench mark (elev. 100.43) painted on a point of rock 2.5 feet south-east of the initial point.

**Channel and Control**—About 1,200 feet above the station the channel begins to narrow down and turns to the right out of the lake above. It is comparatively straight thence to the station and falls. Both banks are high, rocky and wooded, and will not overflow. The bed of the stream is rocky and permanent. The current is slow above and moderately swift at the section.

**Discharge Measurements**—Made from a canoe with a small Price current meter.

**Remarks**—The very steady regimen of the English River, together with the lack of gauge readers, makes it possible and necessary to apply the gauge heights at Ear Falls to the gauge at Manitou Falls. Gauge readings taken on nearly the same day were used in making up curves for the two stations, and the results obtained justify the assumptions made. No allowance is made for "lag."

English River near Oak Falls

**Location**—About one mile above the upper Oak Fall, just above Little Rapids, and about one-half mile below Wilcox Lake, District of Kenora.

**Records Available**—Discharge measurements from August, 1914.

**Drainage Area**—15,570 square miles.

**Gauge**—Vertical staff with enamelled face screwed to a cedar post and firmly wedged in rock on the right bank 200 feet above the metering section. The zero on the gauge (elev. 194.12) is referred to a bench mark (elev. 200.00) painted on a rock in the river near the right bank and 20 feet above the final point for soundings. The initial point for soundings is located on the left bank, and consists of the head of a nail driven in the side of a 12-inch poplar blazed and marked I.P., N. 70° W.

**Channel and Control**—Straight for about 300 feet above and ½ mile below the station. Both banks are high, rocky and wooded, and not liable to overflow. The bed of the stream is rocky and practically permanent. The current is sluggish above and moderately swift below the station, a small rapid existing about 800 feet below.

**Discharge Measurements**—Made from a canoe with a small Price current meter.

**Remarks**—The very steady regimen of the English River, together with the lack of gauge readers, makes it possible and necessary to apply the gauge heights at Ear Falls to the gauge at Oak Falls. Gauge readings taken on nearly the same day were used in making up curves for the two stations, and the results obtained justify the assumptions made. No allowance is made for “lag.”

### Footprint River at Rainy Lake Falls

**Location**—100 feet above the crest of the lowest fall, at the mouth of the Footprint River where it flows into the north-west bay of Rainy Lake, on Indian Reserve 17A, District of Rainy River.

**Records Available**—Monthly discharge measurements from July, 1914. Daily gauge heights, Sept. 18, 1914, to June 30, 1917.

**Drainage Area**—590 square miles.

**Gauge**—Vertical steel staff gauge, graduated in feet and inches. The zero on the gauge (elevation 101.30) is referred to a bench mark (elevation 110.51) painted on the ledge of a rock on right bank.

**Channel**—About 40 feet above the station the channel curves to the left and then runs straight for about 140 feet, dropping into Rainy Lake. The banks are high, rocky, wooded, and not liable to overflow. The right bank has been burnt over. The bed of the river contains large boulders, and one channel exists at all stages.

**Discharge Measurements**—Made from a canoe and wading with a small Price current meter.

**Winter Flow**—Relation of gauge height to discharge not affected by ice.

**Regulation**—Occasional operations of the dam at Footprint Lake cause fluctuations in the river at the gauge.

**Accuracy**—The rating curve is well defined. Open water curve used throughout the year.

### Manitou River at Devil's Cascades

**Location**—About 150 feet above the old dam, at the head of the Devil's Cascades, Rainy River District.

**Records Available**—Discharge measurements from July, 1914. Daily gauge heights, July 15, 1914, to June 30, 1916.

**Drainage Area**—435 square miles.

**Gauge**—An inclined steel staff, graduated in feet and inches, and located on the face of the old dam. The zero of the gauge is at an elevation of 139.38 feet referred to a bench mark (elevation 147.37) painted on a rock 1 foot east of the initial point for soundings.

**Channel**—Straight for about 150 feet above and 400 feet below the station. The right bank is high, rocky, wooded, and not liable to overflow, but the left bank is low and wooded, with a gradually rising bank, which is not liable to overflow unless the dam is operated. The bed of the stream is composed of rock, and the current is slow, one channel existing at all stages.

**Discharge Measurements**—Made from canoe or ice with a small Price current meter.

**Winter Flow**—The relation of gauge height to discharge is affected by ice during the cold period, and measurements are made to determine the winter flow.

**Regulation**—Several dams exist on the river between the section and Manitou Lake, which are not in operation at present. The operation of the dam just above the station causes fluctuations at the gauge.

**Accuracy**—A fairly well-defined rating curve has been developed, and records are considered fair.

Seine River at Skunk Rapids

**Location**—About 200 feet above Skunk Rapids, and 1 mile upstream from the Canadian Northern Ry. bridge. One-half mile north of the C. N. Ry. tracks, and 1 mile west of La Seine Station, in the District of Rainy River.

**Records Available**—Discharge measurements from August, 1914.

**Drainage Area**—2,300 square miles.

**Gauge**—Vertical steel staff gauge with enamelled face, graduated in feet and inches, and located near La Seine station, on the C. N. Ry. The zero on the gauge is at an elevation of 1,138.08 feet, which is referred to a bench mark (elevation 1,152.73) painted on a large boulder, on the right bank of the river, 6 feet from a 6-inch poplar tree used as a final point for soundings. The initial point is on the left bank and consists of a 2-inch spruce tree, blazed and marked I.P. with white paint. "H. E. P. Comm." is painted on the rock directly below the spruce tree.

**Channel and Control**—Straight for about 500 feet above and 200 feet below the station to the rapids. The right bank of the river curves into a point at the rapids forming a narrow channel. The velocity of the river is slow and the banks are high, rocky and wooded. This land has been burnt over, but most of the trees are still standing. The bed of the stream is sandy and clean, with a few boulders near the right bank. One channel exists at all stages.

**Discharge Measurements**—Made from a canoe with a small Price current meter.

**Winter Flow**—The relation of gauge height to discharge is affected by ice during the winter months and measurements are made to determine the winter flow.

**Accuracy**—Open water rating curve is fairly well defined and estimates are considered good.

**Observer**—

Turtle River at Mountain Rapids

**Location**—About 300 feet above Mountain Rapids, and about 8 miles from the Olive Mine, 12 miles from Mine Centre, which is on the C. N. Ry., in the Rainy River District.

**Records Available**—Monthly discharge measurements from August, 1914. Daily gauge heights from August 9, 1914.

**Drainage Area**—1,760 square miles.

**Gauge**—Vertical steel staff gauge with enamelled face, graduated in feet and inches, and fastened on a crib pier at the C. N. Ry. saw mill, 12 miles from the station. The gauge is located 1,000 feet south of the mouth of Little Turtle River, on the east shore of Little Turtle Lake. Zero on gauge (elevation 82.99) is referred to a bench mark established on a rock with white paint, on the left bank of the river, four feet south of a blazed pine tree, marked I.P. with white paint, which is used as the initial point for soundings. The elevation of this bench mark is 96.00, which is referred to another bench mark (assumed elevation 100.00) established on a rock with white paint, 35 feet north-east of the gauge, at the C. N. Ry. Mill at Mine Centre.

**Channel and Control**—Straight for about 1,000 feet above and below the station, the water running slowly. The banks are high, wooded and rocky. The bed of the stream is sandy and clean, one channel existing at all stages. The river is used extensively for log driving, and the log jams in Otter Falls affect the section somewhat.

**Discharge Measurements**—Made from a canoe with a small Price current meter.

**Winter Flow**—The relation of gauge height to discharge is seriously affected by ice and measurements are made during the winter to determine the flow.

**Accuracy**—Open water rating curve fairly well defined between gauge heights 91.50 and 94.50. The relation of gauge height to discharge during the log-driving period is affected by back water from log jams.

**Observer**—Hiram Smith, Mine Centre.

### Wabigoon River near Quibell

**Location**—About 200 feet above the second fall from the G.T.P. Railway bridge, and  $\frac{1}{2}$  mile below the bridge which spans the first fall. One mile east from Quibell Station, Township of Wabigoon, District of Kenora.

**Records Available**—Discharge measurements from June, 1914.

**Drainage Area**—2,400 square miles.

**Gauge**—Vertical staff with enamelled face screwed to a 5-inch hewn spruce post firmly wedged and braced to the rock on the right bank of the river 1,200 feet above the metering station. The zero on the gauge (elev. 1,061.64) is referred to a bench mark (elev. 1,069.46, G.T.P. datum) painted on a point of rock just below the gauge. The initial point for soundings is a spike driven in the rock on the left bank.

**Channel and Control**—1,200 feet above the station the channel takes a sharp bend to the right, thence running comparatively straight to the station and falls. The water is sluggish above and moderately swift at the station. The banks are high, rocky and wooded. The bed of the stream is full of boulders and crevices. One channel exists at all stages.

**Discharge Measurements**—Made from canoe and ice with a small Price current meter.

**Regulation**—The Dryden Timber and Power Company operate a plant on the Wabigoon River at Dryden, which runs 24 hours per day with the exception of Sundays and holidays.

**Winter Flow**—Ice formation is very heavy here, and the winter flow is somewhat disturbed by it.

**Accuracy**—Rating curve fairly well defined, and estimates for open water flow only have been made.

**Observer**—D. C. Warner, Quibell.

Wabigoon River at Wabigoon Falls

Location—About 100 feet above Wabigoon Falls, the last fall on the river, and three miles from its junction with the English River, District of Kenora.

Records Available—Discharge measurements from June, 1914.

Drainage Area—3,120 square miles.

Gauge—Vertical staff with enamelled face screwed to a 5-inch hewn spruce post firmly wedged and braced to the left bank about 200 feet above the metering section. The zero on the gauge (elev. 111.37) is referred to a bench mark (elev. 120.07), consisting of a nail driven in the head of a 4-inch tamarac stump two feet up-stream from the gauge. Another bench mark (elev. 118.51) is painted on a point of rock on the left bank 75 feet below the metering section. The initial point for soundings is on the right bank, the edge of a 5-inch blazed poplar tree, and marked I. P., S. 12° E.

Channel and Control—Straight for about 1/2 mile above and 100 feet below the station to the falls. Both banks are high, rocky and wooded, and will not overflow. The bed of the stream is composed of rock, with a few boulders and weeds at the right bank. The current is sluggish at and above the station, but swift just below the section.

Discharge Measurements—Made from canoe and ice with a small Price current meter.

Regulation—The Dryden Timber & Power Company operate a plant at Dryden, Ontario. The power is used for the mill and for lighting the town. This plant runs 24 hours per day with the exception of Sundays and holidays, when it runs 12 hours.

Accuracy—The station rating curve is fairly well defined. Estimates of flow have only been made for five open water months.

Discharge Measurements of Wabigoon River at Wabigoon Falls in 1917

### Winnipeg River at Whitedog Falls

**Location**—South channel, about 500 feet above the second Whitedog Falls. North Channel, immediately above the upper fall in this channel. These are the sections established by the Manitoba Hydrographic Survey and where measurements are made by that organization.

**Records Available**—Discharge measurements have been made at irregular intervals at these sections since the summer of 1914 by the Commission's hydrographers, but more regularly by the Manitoba Hydrographic Survey. The water elevations are returned to, and estimates of flow are made by, the Manitoba Hydrographic Survey.

**Drainage Area**—27,135 sq. miles.

**Gauge**—South Channel. Two sections of P.W.D. standard gauge plating are placed on the left bank. The zero of this gauge is at an elevation of 1026.09, referred to a B.M. No. 217 W.P.S. chiselled and painted on rock about 150 feet above the crest of the fall on the right bank elevation 1040.01. North Channel—Two sections of P.W.D. standard gauge plating screwed to a timber bolted to face of rock on the right bank of the river 75 feet above the section. The zero of the gauge is at an elevation of 1034.55 sea level datum referred to a B.M. elevation 1038.61 chiselled and painted on a rock on the left bank at the head of the portage. An automatic gauge is also in use to obtain levels of Sand Lake water, located on an island directly above South Channel.

**Channel and Control**—The entire flow of the river is always confined to the above described channels. Both of these channels are through bed rock. Active control of the flow of the water tributary above Kenora is exercised at that place.

**Discharge Measurements**—Are made from a cable car at the south channel and from an overhead cable from the shore at the north channel.

Ausable River near Arkona

**Location**—At the highway bridge at Marsh’s Mills, about two miles east of the village of Arkona, near lot 22, concession 7, Township of West Williams, County of Middlesex.

**Records Available**—Discharge measurements from May 14, 1915. Gauge readings from June 24, 1915.

**Drainage Area**—408 square miles.

**Gauge**—Vertical staff gauge 0 to 12 feet on the downstream side of the first pier. The elevation of the zero of the gauge is 0.00 and a B.M. is established on top of the right girder, elevation 23.31.

**Channel and Control**—The discharge measurements are made in the medium fast water between the two rapids. The flow is confined between the abutments at all stages. The stream bed is composed of shale, and will not shift. The channel is straight for 400 yards above and below the section.

**Discharge Measurements**—Made from the bridge, except in low water, when they are made at a wading section 300 feet above the bridge.

**Accuracy**—Discharge measurements do not satisfactorily cover the range of stage.

**Observer**—Milton Marsh, Arkona P.O.

Beaver River near Kimberley

**Location**—At Hill’s Bridge, about 2 miles above Kimberley, on the south half of lot 2, concession 5, Township of Euphrasia, County of Grey.

**Records Available**—Discharge measurements at Weber’s Bridge September, 1914, to January, 1915. Discharge measurements April 25, 1915, to date, at Hill’s Bridge. Daily gauge heights from April 25, 1915.

**Drainage Area**—100 square miles.

**Gauge**—Vertical staff 0 to 6 feet on tree on left bank 20 feet downstream from bridge. Zero on gauge is 0.00.

**Channel and Control**—Channel straight above and below for a distance of 200 feet. The banks and control are permanent under ordinary conditions. The bed is composed of stones and gravel, one channel existing at all stages.

**Discharge Measurements**—Made from the bridge during the high-water period, and from a permanent wading section located 20 feet above the bridge for the low-water stages.

**Regulation**—The Hydro-Electric Power Commission’s power plant located three-quarters of a mile upstream, though a twenty-four hour power, has a marked effect on the river stage at this section.

**Accuracy**—The rating curve is fairly well defined, but open-water estimates are subject to errors, due to fluctuations in stage caused by operation of power plant.

**Observer**—A. Hill, Kimberley, P.O.

Bighead River at Meaford

**Location**—At the Georgian Bay Milling & Power Co. grist mill bridge outside of the Town of Meaford, near lot 15, concession 5, Township of St. Vincent, County of Grey.

**Records Available**—Discharge measurements and daily gauge heights from June 10, 1915.

**Drainage Area**—132 square miles.

**Gauge**—Vertical staff 0 to 12 feet on right abutment. Elevation of zero on gauge is 0.00.

**Channel and Control**—The channel is straight for 100 feet above and 500 feet below the gauging station. The bed of the stream is composed of stones and gravel, and is shifting. During the freshet stage, banks and control are not stationary. During a freshet in January, 1916, the stream scoured badly, completely changing the rating curve.

**Discharge Measurements**—Made at the bridge, also at a wading station 100 feet downstream.

**Regulation**—Low-water flow is controlled by the Georgian Bay Milling & Power Co.'s dam located four miles upstream. As the plant is usually run for 24 hours each day, except Sunday, the fluctuations will not be great.

**Accuracy**—The rating curve is subject to changing conditions due to scouring.

**Observer**—Wilbert Baker, Meaford.

Credit River at Cataract Junction

**Location**—About 500 feet from C.P.R. station at Cataract Junction, lot 14, concession 3, Township of Caledon, County of Peel.

**Records Available**—Discharge measurements from June, 1912. Daily gauge heights from May 7, 1915.

**Drainage Area**—85 square miles.

**Gauge**—Vertical staff 0 to 6 feet on tree on right bank. Zero on gauge (elevation 8.00) is referred to a B.M. (elevation 10.00) painted on rock 100 feet downstream from metering section.

**Channel and Control**—The channel is straight for about 350 feet above and 300 feet below the section. The right bank is low, and overflows during high stages. The bed is composed of gravel, which is shifting during flood stages.

**Discharge Measurements**—Made at permanent wading section at all stages.

**Winter Flow**—Relation of gauge height to discharge is affected by ice, and measurements are made to determine this flow.

**Regulation**—The dam at Erin, about four miles upstream, causes serious fluctuations in the river stage at this section. Semi-daily gauge readings will not give a representative mean.

**Accuracy**—A fairly well-defined rating curve has been established for this station. The accuracy of the estimates of discharge depends upon the accuracy of the mean daily gauge heights.

**Observer**—Alfred Riches, Cataract Junction.

### Maitland River at Ben Miller

**Location**—At the highway bridge in the Village of Ben Miller, five miles south-west of the Town of Goderich, Township of Colborne, County of Huron.

**Records Available**—Discharge measurements from May, 1911. Daily gauge heights from June 1, 1911.

**Drainage Area**—950 square miles.

**Gauge**—Vertical steel staff gauge with enamelled face graduated in feet and inches and located on the downstream side of the first pier from the left abutment. The zero on the gauge (elev. 12.00) is referred to a bench mark (elev. 29.07) painted on the downstream side of the right wing wall.

**Channel and Control**—The channel is straight for 300 feet above and  $\frac{1}{4}$  mile below the section. Both banks are low, clean and liable to overflow at high stages. The control is permanent during all stages, being composed of limestone.

**Discharge Measurements**—Made from the bridge at ordinary and high stages, and at a permanent wading section during the low water period.

**Winter Flow**—Ice greatly affects relation of gauge height to discharge. The section being wide and shallow, ice frequently freezes to the bottom, rendering meter measurements impossible.

**Accuracy**—For the low water a well-defined rating curve has been established.

**Observer**—E. Pfrimmer, Ben Miller P.O.

Nottawasaga River near Nicolston

**Location**—At McLean’s Bridge, 4 miles north of the Town of Nicolston, near lot 5, concession 6, Township of Essa, County of Simcoe.

**Records Available**—Discharge measurements from June, 1912. Daily gauge heights from August 18, 1914.

**Drainage Area**—416 square miles.

**Gauge**—Vertical staff 0 to 12 feet on right abutment, upstream side. Zero on the gauge (elevation 4.00) is referred to B.M. (elevation 20.00) on tension rod of bridge 60 feet from initial point for soundings.

**Channel and Control**—The channel below the section is straight for about 600 feet. Above the section it is straight for about 100 feet, when it takes a sharp turn to the right, causing an angle at the bridge. Both banks and control are subject to change under high-water conditions.

**Discharge Measurements**—Made from the bridge at all stages.

**Winter Flow**—The relation of gauge height to discharge is affected by ice during the winter months and measurements are made to compute the winter flow.

**Regulation**—The dams above have little effect on this section.

**Accuracy**—These records, with the reduction made for the angle at section, can be considered good up to discharges of 800 second feet. There are not sufficient records available to compute discharges very accurately above gauge height 8.00 feet. The estimate made is probably close to the actual discharge.

**Observer**—John Scott, Egbert P.O.

Rocky Saugeen River near Markdale

Location—At the Glen Cross highway bridge, three-quarters of a mile above Hayward's Falls, near lot 5, concession 8, Township of Glenelg, County of Grey.

Records Available—Discharge measurements and daily gauge heights from June 8, 1915.

Drainage Area—96 square miles.

Gauge—Vertical staff 0 to 6 feet on the downstream side of the centre pier of bridge. The zero of gauge (elevation 0.00) is referred to a B.M. (elevation 29.65) painted on a rock projecting from bank 40 feet north from first telephone pole on left bank.

Channel and Control—The channel is straight for 200 feet above and 500 feet below the station. The bed and banks are permanent, as flood conditions do not exist on this stream.

Discharge Measurements—Made at a permanent wading section. When the river is extremely high measurements will be made from the bridge.

Winter Flow—Ice has but little affect at this section and the open water curve is at all times applicable.

Regulation—The dam above has little effect on the river stage at this section.

Accuracy—The rating curve is well defined except for maximum flows.

Observer—Arthur McNally, Markdale.

Saugeen River near Port Elgin

Location—At the highway bridge known as McCalder’s Bridge, 4 miles north-east of the Town of Port Elgin, near lot 5, concession 12, Township of Saugeen, County of Bruce.

Records Available—Discharge measurements from July, 1911. Daily gauge heights from April 19, 1914.

Drainage Area—1,565 square miles.

Gauge—Vertical staff 0 to 12 feet on left abutment downstream side. Zero on gauge (elevation 4.00) is referred to a B.M. (elevation 25.00) painted on wooden hand-rail of bridge.

Channel and Control—The channel is straight for about 350 feet above and below the section. The bed of the stream, with two submerged piers at the section, is composed of fairly large boulders, which will only shift during high flood stages. The current is moderate and flows through two channels, which are separated by the centre pier of the bridge.

Discharge Measurements—Made from the bridge at all stages.

Winter Flow—Ice greatly affects relation of gauge height to discharge. Measurements are made during the winter to determine the flow.

Regulation—Fluctuations occur in the river stage at this section. This is no doubt caused by the plants at Walkerton, Chesley and Paisley.

Accuracy—Semi-daily reading should give a fair representative mean. The fluctuations that have been noted are not large, consequently the gauge height records can be classified as good. A well-defined curve is shown for flows up to 20,000 sec. feet. A slight angle in cross-section No. 1 may affect accuracy of meter measurements.

Observer—John Shanks, Southampton.

Saugeen River near Walkerton

**Location**—At the south line bridge, 3½ miles above the Town of Walkerton, near lot 39, concession 2, Township of Brant, County of Bruce.

**Records Available**—Discharge measurements from June, 1912. Daily gauge heights from March 26, 1914.

**Drainage Area**—850 square miles.

**Gauge**—Vertical staff 0 to 12 feet on right abutment. Zero on the gauge is 12.00 feet, which is referred to a B.M. (elevation 35.00) on tension rod of bridge.

**Channel and Control**—Channel is straight for about 500 feet above and below the section. Both banks are high, and do not overflow. The river bed is composed of clay, one channel existing at all stages.

**Discharge Measurements**—Made from the bridge at all stages.

**Winter Flow**—Ice greatly affects relation of gauge height to discharge. Measurements are made to determine the winter flow.

**Regulation**—The dam at Walkerton, about 3½ miles downstream, has no effect on the river stage at this section.

**Accuracy**—Weeds below the section have a decided effect on the accuracy of the measurements. During the period when weeds are present, a different rating curve has been established. There are not sufficient records available to define the two curves at all stages, and therefore discharges cannot be classed as very good.

**Observer**—James Preston, Walkerton.

Sydenham River near Owen Sound

Location—At the highway bridge above the Town of Owen Sound's filtration plant, near lot 9, concession 1, Township of Derby, County of Grey.

Records Available—Discharge measurements and daily gauge heights from June 9, 1915.

Drainage Area—71 square miles.

Gauge—Vertical staff 0 to 6 feet on upstream side of first pier from right abutment. Zero on the gauge is 0.00.

Channel and Control—The channel is straight for 200 feet above and below the section, both banks are low, but do not overflow, the stream never assuming flood proportions. The bed is composed of solid rock, with two channels during the low-water period. During the high-water stages all the water is confined between the two abutments of the bridge.

Discharge Measurements—Made from the bridge during the high-water period, and from a permanent wading section located 30 feet upstream during the low stages.

Winter Flow—Ice has little effect.

Regulation—The Town of Owen Sound has a dam 300 feet above this section that is used to supply water for domestic uses.

Diversions—An additional 750,000 gallons of water per day should be added to the daily flow at this section, which is the approximate amount diverted.

Accuracy—There are not sufficient readings to define a curve at all stages. Discharges between gauge heights .90 and 1.40 are fair.

Observer—Myrtle Cook, Ashley P.O.

Thames River (Main Stream) near Byron

**Location**—At the highway bridge known as Kilworth Bridge, 2 miles north-west of the Town of Byron, near the Village of Komoka, Township of Delaware, County of Middlesex.

**Records Available**—Monthly discharge measurements from March, 1912. Daily gauge heights from March 13, 1914.

**Drainage Area**—1,270 square miles.

**Gauge**—Vertical staff 0 to 12 feet on centre pier. The zero on gauge (elevation 6.00), which has remained unchanged since established, is referred to a B.M. (elevation 31.21) on downstream side of right abutment.

**Channel and Control**—The channel is straight above and below section for about 600 feet. The banks are high, and do not overflow or shift to a great extent. The control, however, is not stationary under high-water conditions. The velocity is high.

**Discharge Measurements**—Made from the bridge at all stages.

**Winter Flow**—Ice is present during the winter period, and measurements are made to determine the winter flow.

**Accuracy**—During flood stages the high velocity necessitates the taking of surface readings. The station rating curve is fairly well defined for ordinary flows.

**Observer**—James Bourne, Komoka.

Thames River (North Branch) near Fanshawe

Location—At the highway bridge near Fanshawe Post Office, between lots 8 and 9, concessions 4 and 5, Township of London, County of Middlesex.

Records Available—Daily gauge heights and discharge measurements from May 13, 1915.

Drainage Area—585 square miles.

Gauge—Vertical staff 0 to 12 feet on right abutment, downstream side. Elevation of zero on gauge 4.00 is referred to a B.M. (elevation 30.00) on tension rod, downstream side, 170 feet from the initial point of soundings.

Channel and Control—The channel is straight above and below section for 500 feet. The bed of the stream is composed of clay and gravel, the banks are high and will not overflow. The channel and control is shifting during high-water periods.

Discharge Measurements—Made from the bridge and at a permanent wading section about 500 feet above during low water.

Accuracy—This curve is fairly well defined.

Observer—Allen Donley, London.

(a) Ice measurement. Not taken at regular section.  
(b) Ice measurement taken 350 feet above regular section.  
(c) Ice at sides may have effect.  
(d) Some surface velocities observed and co-efficient applied.  
(e) Not taken at regular section.

Thames River (South Branch) near Ealing

**Location**—At the highway bridge known as Vauxhall Bridge between lots 10 and 11, concession B, between Townships of London and Westminster, County of Middlesex.

**Records Available**—Daily gauge heights and discharge measurements from May 11, 1915.

**Drainage Area**—515 square miles.

**Gauge**—Vertical staff 0 to 12 feet on downstream side of first right pier. Elevation of zero on gauge is 4.00, referred to B.M., elevation 30.00.

**Channel and Control**—The channel is straight above and below for 800 feet. The banks and control are shifting under high-water conditions.

**Discharge Measurements**—Made from the bridge. During the extreme low water a wading section is used.

**Winter Flow**—The relation of gauge height to discharge is affected by ice during the winter months.

**Accuracy**—The rating curve is fairly well defined up to gauge height 11.00 feet.

**Observer**—F. W. Leathorn, London.

- (a) Ice measurement.
- (b) Ice measurement taken 400 feet above gauge.
- (c) Affected by ice jam. Surface velocities recorded and co-efficient applied.
- (d) Mostly all surface velocities recorded and co-efficient applied.

Grand River at Belwood

Location—At the bridge in the Village of Belwood, on the 7th concession, Township of Garafraxa, County of Wellington.

Records Available—From August 31, 1913.

Drainage Area—280 square miles.

Gauge—Vertical steel staff 0 to 12 feet on right abutment. Elevation of zero on gauge is 1366.00, which has remained unchanged since established.

Channel and Control—The channel is straight for about 400 feet above and 600 feet below gauging section. The channel bed at the bridge is solid rock, and permanent at all stages. At the permanent low water section, however, the channel is shifting under high water conditions.

Winter Flow—During the winter months the relation of gauge height to discharge is greatly affected by ice, and readings are taken to determine the winter discharge.

Accuracy—The river stage at this section is not affected by any power plants above or below. The rating curve is well defined, and estimates are considered good.

Observer—H. Hutchinson, Belwood P.O.

Grand River at Brantford

**Location**—At the Toronto-Hamilton-Buffalo Railway bridge in the City of Brantford, County of Brant.

**Records Available**—Discharge measurements from August, 1912. Daily gauge heights from July 8, 1913.

**Drainage Area**—2,000 square miles.

**Gauge**—Vertical steel staff, 0 to 12 feet on left abutment. Elevation of zero on gauge is 643.00, which has remained unchanged since established.

**Channel and Control**—The flow is confined between the abutments of the bridge at all stages. The bed and left bank is shifting under high water conditions.

**Discharge Measurements**—Made from the bridge at all stages.

**Winter Flow**—The relation of gauge height to discharge is seriously affected by ice, and measurements are made to determine the winter flow.

**Regulation**—The Western Counties Electric Company have a dam 1,000 feet above this section that causes fluctuations that are noticeable in the river stage. Their plant is running at its full capacity. The observed mean gauge height does not give the correct mean daily stage.

**Diversions**—The Western Counties Electric Company use about 50 second feet for power purposes at times.

**Accuracy**—With the exception of a slight angle at section these records can be classified as good.

**Observer**—John Anguish, Brantford.

Discharge Measurements of Grand River at Brantford in 1916-7

Grand River near Conestogo

Location—At the highway bridge  $\frac{1}{4}$  mile below the Village of Conestogo, Township of Woolwich, County of Waterloo.

Records Available—From July 16, 1913.

Drainage Area—550 square miles.

Gauge—Vertical steel staff 0 to 12 feet on the centre pier of bridge. Elevation of zero is 1017.00 feet.

Channel and Control—The channel is straight for about 300 feet above and below the gauging section. The banks are low and liable to overflow. The bed is composed of gravel, and all the water is confined between the abutments of the bridge, except at a very serious flood. In flood stages the banks and bed are liable to shift slightly.

Discharge Measurements—Made from the bridge during high water, and at a permanent low water section located 600 feet upstream during the low water period.

Winter Flow—The relation of gauge height to discharge is seriously affected by ice during the winter season, and measurements are made to determine the winter flow.

Accuracy—The slight shifting of the channel has little affect. The rating curve is well defined, and records are good.

Observer—Geo. Schinbein, Conestogo.

Grand River at Galt

Location—At the Concession Street bridge, in the City of Galt, Township of North Dumfries, County of Waterloo.

Records Available—From July 21, 1913.

Drainage Area—1,360 square miles.

Gauge—Vertical steel staff 0 to 12 feet on first left pier of the bridge. Elevation of zero on gauge is 851.00, which has remained unchanged since established.

Channel and Control—The channel is straight for 1,000 feet above and below the section. The bed is solid rock formation. Residents each year encroach on the natural channel by building up the banks to protect their lots from washing away.

Discharge Measurements—Made from bridge for high stages, and at a permanent wading section 150 feet upstream during low stages.

Winter Flow—Ice slightly affects the relation of gauge height to discharge during the winter, and measurements are made to determine the winter flow.

Regulation—This section is subject to serious fluctuations in the river stage caused by the operation of the Galt dam situated ¼ mile above.

Accuracy—The rating curve is fairly well defined, and records are good.

Observer—Charles Parker, Galt.

Grand River at Glen Morris

**Location**—At the Glen Morris bridge, in the Village of Glen Morris, Township of South Dumfries, County of Brant.

**Records Available**—Discharge measurements from August, 1912. Daily gauge heights, from July 21, 1913.

**Drainage Area**—1,390 square miles.

**Gauge**—Vertical steel staff 0 to 12 feet on the second pier from the left bank. Elevation of the zero on gauge is 801.00, which has remained unchanged since established.

**Channel and Control**—The channel is straight for 1,000 feet above and below the section. The bed of the river is composed of gravel and boulders, and banks are permanent. The bed and control is shifting under high water conditions.

**Discharge Measurements**—Made from bridge during the high water stages, and at permanent wading section located 150 feet upstream during the lower water periods.

**Winter Flow**—This section is seriously affected by ice which usually floods, forming as many as three or four layers of ice with water between them. Measurements are made during the winter months to determine the winter flow.

**Regulation**—This section is subject to fluctuations in the river stage, due to the storing of water, during the night and at week ends, by the Galt dam, located eight miles above.

**Accuracy**—Owing to poor natural conditions, the liability of the control to shift and back water caused by ice, the records cannot be considered better than fair.

**Observer**—Alfred Forbes, Glen Morris P.O.

Grand River at York

Location—At the highway bridge in the Village of York, Township of Oneida, County of Haldimand.

Records Available—From June 25, 1913.

Drainage Area—2,280 square miles.

Gauge—Vertical steel staff 0 to 6 feet on the first pier from left abutment and 6 to 12 feet on the left abutment. The elevation of zero is 593.00, and has remained unchanged since established.

Channel and Control—The flow is confined between the abutments of the bridge at all stages. The bed of the river is well protected, but shifting during flood stages. A partly demolished dam about 200 feet downstream affects flow, especially at low stages. Part of this old dam is washed out at each flood period.

Discharge Measurements—Taken from the highway bridge, and at a permanent low water section located 800 feet above during the low water period.

Floods—No floods of a serious nature have occurred here since the spring of 1912, when the dam below the bridge was wrecked, the water cutting around the right abutment, greatly increasing the width of the channel. Village residents state the water rose to a gauge height of 606 feet, which would mean approximately 100,000 second feet.

Winter Flow—The relation of gauge height to discharge is seriously affected by ice, and measurements are made to determine the winter flow.

Regulation—The nearest dam is at Caledonia, five miles above. The intermittent operation of the mills causes daily fluctuations in the gauge heights.

Accuracy—The conditions of flow are good, except for the fluctuations caused through the Caledonia Mills. Well-defined rating curves have been established, and the records can be considered good. Semi-daily gauge heights will not give a good representative mean.

Observer—Fred. Brown, York P.O.

Nith River near Canning

Location—At the highway bridge 200 feet upstream from the Grand Trunk Railway bridge, lot 2, concession 2, Township of Blenheim, County of Oxford, 1 mile from the Village of Canning.

Records Available—From July 5, 1913.

Drainage Area—430 square miles.

Gauge—Vertical steel staff 0 to 3 feet on pile in centre of stream and 3 to 12 feet on left abutment. Elevation of zero on gauge is 799.00, which has remained unchanged since established.

Channel and Control—Slightly shifting bed; both banks permanent under ordinary conditions. Control only affected by ice jams during the early freshet.

Discharge Measurements—Made from the bridge during high-water stages, and from a permanent wading section 100 feet above during the low-water period.

Winter Flow—The relation of gauge height to discharge is seriously affected by ice during the winter, and measurements are made to determine the winter flow.

Regulation—Fluctuations of a serious nature occur in the river stage at this section, caused through the intermittent operation of the milling plant at Canning, 1½ miles above.

Accuracy—On account of stage variations, these records are not very reliable.

Observer—Lewis Baker, Canning P.O.

Speed River near Guelph

Location—At Caraher’s highway bridge above the junction of the Speed and Eramosa Rivers and 3¼ miles from the City of Guelph, Township of Guelph, County of Wellington.

Records Available—From October 27, 1913.

Drainage Area—77 square miles.

Gauge—Vertical steel staff 0 to 12 feet, one on each abutment of bridge. Elevation of zero on each gauge is 1126.00, which has remained unchanged since established.

Channel and Control—The channel is straight for 250 feet above and 500 feet below the gauging section. During flood stages the control and banks are liable to shift, as the bed is composed of loose gravel. One channel exists at all stages.

Discharge Measurements—Made from the bridge and from a permanent low water section 300 feet downstream.

Winter Flow—The relation of gauge height to discharge is seriously affected by ice during the winter season, and measurements are taken during that period to determine the winter flow.

Regulation—A small mill is operated one mile and a half upstream. Slight fluctuations are caused only in the dry season, and are hardly noticeable at the gauge.

Accuracy—The open channel rating curve is fairly well defined for flows up to 500 second feet, the discharge for low flows being considered good.

Observer—Hugh Caraher, Guelph.

Speed River at Hespeler

**Location**—At a point 100 feet below the jail, which adjoins the power house, in the Town of Hespeler, Township of Waterloo, County of Waterloo.

**Records Available**—Discharge measurements from July 10, 1913. Daily gauge heights from October 23, 1913.

**Drainage Area**—250 square miles.

**Gauge**—Vertical steel staff 0 to 12 feet on jail wall adjoining power house. The elevation of zero on the gauge is 935.00.

**Channel and Control**—Straight for about 300 feet above and below the gauging section. Loose gravel forms the bed of this stream, which is decidedly shifting. The banks are low, and overflow when the water raises 2 feet above normal. Weeds at the control and in channel have a decided effect at the gauging section.

**Discharge Measurements**—Made from a permanent wading section 100 feet below the gauge during the low stages, and the dam 400 feet above will be used as a weir during the flood season.

**Winter Flow**—The relation of gauge height to discharge is somewhat affected by the presence of ice for a short period during the winter season.

**Regulation**—A dam 400 ft. above this section causes serious fluctuations in the river stage during the low water period.

**Accuracy**—Owing to the shifting bed and the presence of weeds at and below section, greatly interfering with the metering of stream, these records can only be classed as fair.

**Observer**—W. D. Scott, Hespeler.
